REPORT.

TO THE

RIGHT HON^{BLE} R. ASSHETON CROSS, M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,

EDINBURGH, 17th April 1876.

SIR,

I HAVE the honour to submit to you, in accordance with the requirements of the Scottish Registration Act (17 and 18 Vict. cap. 80), a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1875, which has been prepared in the usual form, with a view to its being laid before Parliament.

In accordance, also, with the 19th Section of the Scottish Vaccination Act (26 and 27 Vict. cap. 108), I have the honour to submit the Eleventh Annual Report on Vaccination, which refers to the Vaccination of children whose Births were registered in Scotland during the year 1874. Accompanying this Report will be found the usual Tables giving full information regarding the operation of the Vaccination Act from 1864 to 1875 inclusive, and showing the number of Deaths from Small-pox that have been registered in Scotland during each year from 1855 to 1872, and the *estimated* numbers of such Deaths during the three years terminating with 1875. Happily, during these three years, the Deaths from Small-pox have been progressively becoming far less numerous; but the recent experience derived from the epidemic of 1871–1872 forbids

the belief that Small-pox may not again, from time to time, prove formidable as a cause of Death in Scotland.

That the Vaccination Act has worked well in Scotland, and has produced much benefit to the population will be generally admitted; still there are reasons for believing that the Statute would be considerably improved by the introduction of one very simple and yet important amendment. I allude to the proposal for abridging to four months the period during which newly-born children may be legally suffered to remain unvaccinated—a proposal not now made for the first time, and to which I have deemed it my duty to direct attention very strongly in the course of this Report. To the adoption of this proposal it seems to me difficult to imagine any serious objection.

I have the honour to be,

SIR,

Your most obedient Servant,

W. PITT DUNDAS,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY WILLIAM ROBERTSON, M.D., F.R.S.E.

SIR,

THE following Report embraces the usual details regarding the Births, Deaths, and Marriages registered during 1875 in the 1028 Districts into which Scotland was then divided for the purposes of Registration. In the Report is likewise included the usual information as to the Vaccination of the children born during the year 1874.

There have been recorded in Scotland during 1875, 123693 Births, 81785 Deaths, and 25921 Marriages; consequently, in every thousand of the estimated population there have been 35·4 births, 23·4 deaths, and 7·4 marriages. On comparing these numbers with the results of recent experience in Scotland, it is found that the birth-rate of 1875 has been considerably above the mean of the last ten years, and a mere trifle below the birth-rates of 1865 and of 1874—that the death-rate has slightly exceeded that of 1874, and is considerably above the ten years' mean,—that the marriage-rate is above the mean of the decennium, but has been several times exceeded, as, for example, in each of the last three years.

TABLE I.—Population estimated to the middle of each year, with the number of Births, Deaths, and Marriages registered in Scotland during each of the years 1855 to 1875, and their proportion to the Population; also the excess of Births over Deaths, the number of Illegitimate Births, and their proportion to the total Births.

BIRTHS.

123693 Births were registered in Scotland in 1875, being at the rate of 3·54 per cent., or of 354 for every ten thousand of the estimated population of the whole country. The marriage-rate having been very high during the last few years, an increase in the number of births is a natural result.

Tables IV. and V. exhibit the numbers and proportion of births in each of the Five New Groups of Registration Districts. 43633 births were registered in the Eight Principal Towns, 14659 in the Large Towns, 29020 in the Small Towns, 33099 in the Mainland-Rural Districts, and 3282 in the Insular-Rural Districts. From these numbers, and from the estimated population of the several Groups of Districts, it is found that during 1875, the birth-rate was highest in the Large Towns, where it amounted to 4·26 per cent.; that it was 3·72 per cent. in the Principal Towns, 3·64 per cent. in the Small Towns, 3·14 per cent. in the Mainland-Rural, and only 2·52 per cent. in the Insular-Rural Districts. It is curious, and at present not clearly explicable, that the birth-rate in the Large Towns should for the last four years have been uniformly higher than that in the Principal Towns, although the frequency of Marriages is more considerable among the inhabitants of the Principal Towns.

Out of 123693 births, 10640 were illegitimate; that is to say, 8·6 per cent. of the births in all Scotland were illegitimate. In the Insular-Rural Districts the percentage of illegitimate births was 6·1; in the Large Towns it was 6·8; in the Small Towns, 7·9; in the Principal Towns, 8·7; and in the Mainland-Rural Districts, 10·2 per cent.

The relative frequency of illegitimate births in the different counties of Scotland is illustrated in Table VI. In Ross and Cromarty, 4·3 per cent. of the births were illegitimate; in Shetland, 5 per cent.; in Dumbarton, 5·2 per cent.; and in Sutherland, 5·7 per cent. Hence, in only four counties was the proportion of illegitimacy less than 6 per cent. of the total births. In twenty-two counties the illegitimate births constituted between 6 and 12 per cent. of the total births. Of these counties, Bute shows the lowest proportion, namely, 6·1 per cent.; and Berwick the highest, being 10·8 per cent. In seven counties the rate of 12 per cent. was exceeded; thus in Dumfries the proportion of illegimates was 14 per cent.; in Aberdeen, 14·2; in Kirkcudbright, 14·6; in Kincardine, 14·9; in Elgin, 15·7; in Banff, 15·9; and in Wigtown, 16·9 per cent.

Of 123693 children whose births were registered, 63436 were males and 60257 females. For every 100 female births there were consequently 105·3 male births. The largest proportion of male births was in the Insular-Rural Districts, where it was 106·8 to every 100 females born,

TABLE III.—Births, Deaths, and Marriages in each of the Eight Divisions of Scotland during the Year 1875, and their Proportion to the estimated Population.

valuable when it may be in our power to unite the numbers of many years, as a basis for our computations.

Births occurred with greatest frequency during the month of April, when they averaged 364 per diem. They were least frequent in September, when the average daily number of registrations was only 315.

DEATHS.

The Deaths registered during 1875 were 81785, being in the proportion of 234 to every ten thousand of estimated population, or at the rate of 2·34 per cent. This death-rate is very high, considerably exceeding the average death-rate of the last ten years. Since the year 1864 the death-rate of Scotland has been usually about 2·22 per cent. In 1874 it, however, amounted to 2·33 per cent., and in 1875, even this heavy mortality was exceeded. The explanation of this mortality must be reserved for the Detailed Annual Report for 1875; but the tables relative to the causes of the Deaths in the Eight Principal Towns, which accompany the present Report, render it highly probable that an unusual prevalence of diseases of the Respiratory System, due to Meteorological influence, has most effectively contributed to swell the death-rate of 1875 throughout the whole of Scotland. During January there were on an average fully 300 deaths registered every day, but in September the registrations little exceeded 191 deaths per diem.

In the Large Towns the death-rate was 286 for every ten thousand of estimated population—a rate exceeding that experienced during 1874. In the Principal Towns the rate was 264 to every ten thousand inhabitants—a mortality considerably lower than that of the year immediately preceding. In the Small Towns, Mainland-Rural, and Insular-Rural Districts, the rates were 230, 192, and 185 for each ten thousand of their respective populations—numbers indicating a rate of mortality decidedly above that which has been recorded for 1874.

TABLE VII.—Births, Deaths, and Marriages, and their Proportion to the Population, in the Eight Principal Towns of Scotland, during each of the Years 1855–1875.

YEARS.	Population estimated to the middle of each year.	BIRTHS.		DEATHS.		MARRIAGES.

1870	1,053,542	40,452	3·83	28,508	2·70	9,733	0·92
1871	1,073,608	40,442	3·77	31,426	2·93	9,819	0·91
1872	1,094,061	41,657	3·81	30,186	2·76	10,445	0·95
1873	1,114,907	41,504	3·73	30,004	2·69	10,596	0·95
1874	1,136,154	42,641	3·75	32,118	2·83	10,491	0·92
1875	1,171,228	43,633	3·72	30,958	2·64	10,665	0·91

The numbers for 1872, 1873, 1874, and 1875, are made up from the Quarterly Returns; the remainder from the Detailed Annual Reports, where the figures are corrected.

MARRIAGES.

25921 Marriages were registered during the year, being at the rate of 74 marriages for every ten thousand of estimated population. This proportion is far above the average of the last ten years, and is only slightly below the very high marriage-rates of 1872, 1873, and 1874.

The frequency of marriages in different localities is no doubt determined by a variety of circumstances, among which may be specified the amount of wealth and of commercial prosperity existing among the people, the relative proportions of the numbers of the unmarried of either sex living at any particular time, the degree in which habits of provident thrift and of industry prevail, and perhaps, not least, the degree in which the population is aggregated in the larger cities and centres of industrial operations. It has been before remarked in similar reports that the marriage-rate in Scotland is highest in the Groups of Registration Districts where the population is most aggregated. Thus, it is seen in Table V. that the marriage-rate in 1875 was 91 per ten thousand inhabitants in the Principal Towns, 87 per ten thousand in the Great Towns, 70 per ten thousand in the Small Towns, 58 per ten thousand in the Mainland-Rural, and only 42 per ten thousand in the Insular-Rural Districts.

EIGHT PRINCIPAL TOWNS OF SCOTLAND.

Before proceeding to make the usual commentary upon the Births, Marriages, and Deaths in these towns it is necessary to explain a very important change which we have been obliged to introduce into column 1 of Table VIII. in our statement of the estimated populations of Glasgow and of Edinburgh. At the 1st January 1875, the registration area of Glasgow was, by authority of the Sheriff, so materially extended that the estimated population for the middle of the year is now stated at 534564, instead of 517658, the number estimated for the more contracted area. At the same time, an alteration of opposite nature was made in Edinburgh, by means of which the registration area was contracted, and the estimated population for the middle of 1875 was perforce diminished from 215114 to 211626. On statistical grounds these changes are of course to be deplored, but there are considerations of public utility to which mere statistical convenience must defer. It seems only necessary here to point out the nature of the disturbance of our population estimates, which the changes above mentioned have created. Nearly 17000 inhabitants of Small Towns have been nominally transferred to Glasgow, and will be henceforth presumed to increase in numbers, from year to year, at the rate of increase calculated for Glasgow from the date of last Census, and not at the average and lower rate calculated for Small Towns. Then nearly 3500 persons have been transferred from the registration area of Edinburgh to the Group of Mainland-Rural Districts, and will henceforth be considered liable from year to year to a slight *decrease* in numbers, such as was taking place in the Mainland-Rural Districts between 1861 and 1871. Had these 3500 persons been suffered to remain within the registration boundaries of Edinburgh, their numbers would have been, of course, supposed to *augment* from year to year in the same proportion as the population of the city was annually increasing between 1861 and 1871. At the middle of the year 1875, fully $33\frac{1}{2}$ per cent. of the whole population of Scotland were living in the Eight Principal Towns. It is to

this fraction of the population that the numbers in most of the following Tables apply. For the collection of the numbers relative to the whole of Scotland some time is requisite ; for not only must the details which they embrace be carefully analyzed, but errors must be corrected and deficiencies supplied, especially in connection with the recorded causes of deaths. The Detailed Annual Reports furnish the most correct information which this Department can collect regarding the movement of the population in the whole of Scotland. The Ordinary Annual Reports, which are framed by means of combining and correcting the ordinary Weekly, Monthly, and Quarterly Reports are, however, more promptly available, and furnish a sufficiently correct guide to the conditions affecting the inhabitants of the whole country, and must supply valuable hints to those who direct sanitary reform in various localities. Seldom indeed does an epidemic disorder attain considerable proportions in any part of the country without having its approach indicated by the statistics of one or other of our Principal Towns.

BIRTHS IN THE EIGHT TOWNS.

During the year 1875, there were registered in the Eight Towns 43633 Births,—that is 372 births for every ten thousand of population. The birth-rate was lowest in Edinburgh and highest in Greenock ; but the difference between these extreme rates was hardly so considerable as in 1874. For every ten thousand inhabitants of Edinburgh, the rate was 319 births ; in Perth, the rate was 327 ; in Paisley, 349 ; in Aberdeen, 353 ; in Glasgow and in Leith, 390 ; in Dundee, 391 ; and in Greenock, 4·06.

Of 43633 births in the Eight Towns, 3792, or 8·7 per cent. were illegitimate. The illegitimate births constituted 5·6 per cent. of the total births in Leith and in Greenock ; 7·5 per cent. in Paisley ; 8·4 per cent. in Edinburgh and in Glasgow ; 9·3 per cent. in Perth ; 10·5 per cent. in Dundee ; and 13·2 per cent. in Aberdeen.

The records of last Census make it very plain that the proportion of

Aberdeen	94,846	3344	3·53	442	13·2	2010	2·12	700	0·74
Greenock	68,074	2761	4·06	154	5·6	2179	3·20	565	0·83
Paisley	48,598	1792	3·49	135	7·5	1364	2·81	464	0·95
Leith	51,614	2011	3·90	112	5·6	1062	2·06	472	0·91
Perth	26,505	867	3·27	81	9·3	635	2·39	211	0·80

N.B.—The Tables referring to the Eight Towns are made up from the Monthly Returns, and we have not the means of correcting the discrepancies between them and the Quarterly Returns, as the Registration Books are not received at this office till many months after the close of the year.

unmarried and widowed females, aged between 15 and 45, and residing in each of the Eight Principal Towns, varies exceedingly. It appears hardly fair to omit mention of this circumstance when stating the amount of illegitimacy in each of the towns. On computing for the year 1875 the percentage of illegitimate children born in each town by the unmarried and widowed females between the ages of 15 and 45, we find that in Edinburgh the rate was 1·59 per cent.; in Paisley, 1·87 per cent.; in Leith, 1·97 per cent.; in Greenock, 2·13 per cent.; in Perth, 2·25 per cent.; in Dundee, 2·36 per cent.; in Glasgow, 2·43 per cent.; and in Aberdeen, 3·39 per cent.

Of the children born in the Eight Towns, 22274 were males and 21359 females. These numbers are equivalent to a rate of 104·3 males for every 100 females. The excess of male births was most considerable in the Insular-Rural Districts and in the Large Towns, but decidedly less marked in the Principal Towns.

DEATHS IN THE EIGHT TOWNS.

The Deaths registered in the Principal Towns during 1875 were 30955, or in the proportion of 264 to every ten thousand of estimated population. This rate is considerably below the average rate of the last ten years, which was 283.

The mortality varied considerably in the different Principal Towns. For each ten thousand persons residing in Leith there were 206 deaths; for the like number of inhabitants in Aberdeen, 212; in Edinburgh, 238; in Perth, 239; in Dundee, 244; in Paisley, 281; in Glasgow, 287; and

Perth	3,179	207	6·51	32·6

in Greenock, 320. Reference to the last two columns of Table IX. will show that during 1875 the average mortality of the preceding ten years has been exceeded in Greenock only, that in all the other Principal Towns the mortality has been well within the average, and that this has been especially the case in Dundee, Aberdeen, and Leith, where the death-rates of 1875 were lower than that recorded for any of the years embraced in Table IX.

In estimating the relative salubrity of the Principal Towns, one of the chief points to which attention must be directed is the amount of infantile mortality in each. By means of Table X. this subject receives a two-fold illustration. It enables us, firstly, to compare the numbers of children living under five years of age with the numbers who died at this early age; and, secondly, it enables us to contrast the deaths at all ages with the deaths at ages under five years. Infantile mortality was least felt in the population of Aberdeen, and was most considerable in Greenock. For every thousand children living and under five years of age at the middle of 1875, there died, during that year, in Aberdeen, 51·5; in Leith, 61·7; in Perth, 65·1; in Edinburgh, 74·9; in Paisley, 75·8; in Dundee, 76·4; in Glasgow, 95·8; and in Greenock, 105·7. The percentage of deaths at ages under five years, to the deaths at all ages in each Town, was 32·6 per cent. in Perth, 33·5 per cent. in Aberdeen, 35·8 per cent. in Paisley, 38·8 per cent. in Edinburgh, 42·6 per cent. in Dundee, 44·4 per cent. in Leith, 45·5 per cent. in Glasgow, and 49·2 per cent. in Greenock.

Tables XI. and XII. give all the information at present available regarding the causes of deaths that were registered in the Principal Towns; and in calculating the percentages for these Tables, due allowance has been made for the small proportion of deaths that were recorded without a clearly specified cause assigned.

Zymotic Diseases, including all those commonly termed Epidemic, Contagious or Infectious, proved fatal to 55·0 per ten thousand of the population of the Eight Towns, and caused 20·83 per cent. of the total deaths. The mortality from this class of diseases has, upon the whole, not been so severe in the Eight Towns as the experience of former years might have prepared us to find it. As usual, the different Towns have suffered in very different proportions from these causes. Thus, the proportion of the total deaths, which was due to Zymotics, was only 15·44 per cent. in Aberdeen, 16·22 in Perth, 18·03 in Dundee, 19·01 in Paisley, 20·82 in Glasgow, 21·72 in Leith, 22·87 in Edinburgh, and 27·53 in Greenock.

In Glasgow, 4·78 per cent. of the deaths were due to Hooping-cough, 4·68 per cent. to Scarlatina. The mortality from Fevers, and generally from all other Zymotics Diseases, was certainly lower than usual.

In Edinburgh the prevailing epidemic was Scarlatina, which caused 10·24 per cent. of the total deaths, and proved fatal to fully 24 out of every ten thousand inhabitants. The number of deaths from Hooping-cough amounted to 3·75 of all deaths registered. The deaths from Fever and from other Zymotics were remarkably few in number.

In Dundee the prevalent epidemics seem to have been Diarrhœa, causing 5·21 per cent. of the deaths; Hooping-cough, with 4·32 per cent. of deaths; and Scarlatina, with 3·81 per cent. of deaths. The mortality from other epidemics was trifling.

In Aberdeen, Hooping-cough caused 4·1 per cent. of the deaths, and Small-pox, 1·30 per cent.

In Greenock, 6·64 per cent. of the deaths were due to Hooping-cough,

5.52 per cent. to Fevers, 4.73 per cent. to Measles, 3.95 per cent. to Scarlatina, and 1.07 per cent. to Diphtheria.

In Paisley, 4.73 per cent of the deaths were due to Measles, 3.11 per cent. to Scarlatina, 3.11 per cent. to Fevers, and nearly 1.0 per cent. to Small-pox.

In Leith, of the total deaths, 6.14 per cent. were from Scarlatina, 3.78 per cent. from Diarrhœa, 3.40 per cent. from Hooping-cough, and 3.12 per cent. from Croup, a disease which appears to be more fatal in Leith than in any other of the Principal Towns of Scotland.

In Perth, Scarlatina caused 3.02 per cent. of the deaths; Diarrhœa, 3.34 per cent.; Measles, 2.38 per cent.; Diphtheria, 1.27 per cent.

When the returns from the whole Group of Eight Principal Towns are united, it is seen that the epidemic which has during 1875 been most destructive to life is Scarlatina, the deaths from which, 1581 in number, have constituted 5.14 per cent. of the total deaths, and have removed 13.6 out of every ten thousand members of the population of the Group. Next in order of fatality has been Hooping-cough, the deaths from which were 4.37 per cent. of the whole mortality; Diarrhœa causing 3.13 per cent. of deaths; Fevers causing only 2.44 per cent. of deaths; and Measles, with a mortality of 1.83 per cent. of the total deaths. Croup, Diphtheria, and Small-pox caused respectively 1.11, 0.80, and 0.16 per cent. of the total deaths; and

the mortality ascribed to the remaining diseases of the Zymotic class was not such as to require detailed notice here.

The form of Fever which has been most destructive is the Enteric or Typhoid. This disease caused at least two deaths for every one ascribed to Typhus. In Leith and Perth only the deaths from Typhus were more numerous than those from Typhoid Fever.

The deaths from Erysipelas were 151; from Metria, 95; from Syphilis, 91; from Rheumatic Fever, 52; from Pyæmia, 18; and from Noma, 4.

Diseases of Uncertain Seat caused 1029 deaths. Of these, 518 were due to Cancer, and the populations of Perth, Edinburgh, and Aberdeen appear to have suffered far more frequently from this cause than the inhabitants of the other Principal Towns. Thus, while the mortality due to Cancer was in Leith only 3·1 out of ten thousand inhabitants, it amounted in Edinburgh to 6·3, in Aberdeen to 6·1, and in Perth to 7·6. The deaths ascribed to Dropsy were 330. It is a pity that so many deaths should in these returns be necessarily grouped under this vague heading; but, in the absence of medical certificate as to the precise pathological cause of the *symptom* Dropsy in any given case, we are not at liberty to refer it to Disease of the Heart, Kidneys, Liver or Ovary, but must include it under the old-fashioned heading provided among the Diseases of Uncertain Seat.

From Tubercular Diseases there were 5046 deaths. This is equivalent to a rate of 43·4 deaths to every ten thousand inhabitants of the Eight

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the Year 1875, allowing for the causes of Death not specified.

Towns. It constitutes 16·42 per cent. of the total deaths in these Towns. Pulmonary Consumption alone was the cause of 3577 deaths, being 11·57 per cent. of the whole recorded mortality, and 30·8 deaths to every ten thousand persons living. Again it is found that, of the Eight Towns, Leith appears to suffer least from Consumption. Only 16·3 out of every ten thousand inhabitants succumbed in Leith to Phthisis in 1875, and only 7·93 per cent. of the total deaths were from this cause; while in Glasgow 36·7 out of every ten thousand persons died of Phthisis, and the percentage of total deaths due to this one disease was 12·76. Of the remaining Tubercular Diseases, Hydrocephalus caused 783; Tabes Mesenterica, 444; and Scrofula, 242 deaths.

Diseases of the Brain and Nervous System caused 2776 deaths, being 9·03 per cent. of the total deaths. This is equivalent to a death-rate of 23·9 for every ten thousand inhabitants of the Eight Towns. The percentage of deaths due to Brain Diseases was 11·04 in Aberdeen, 10·60 in Edinburgh, 10·50 in Paisley, 9·16 in Leith, 9·06 in Perth, 8·8 in Dundee, 8·4 in Greenock, and 8·26 in Glasgow. The proportion of the population that was removed by these causes, out of ten thousand living in each town, was 29·5 in Paisley, 26·9 in Greenock, 25·3 in Edinburgh, 23·7 in Glasgow, 23·4 in Aberdeen, 21·7 in Perth, 21·5 in Dundee, and 18·8 in Leith.

Diseases of the Heart and Circulatory System caused 1397 deaths, or 4·55 per cent. of the total mortality. The deaths from these causes were most numerous in Perth, where they removed 19·8 out of every ten thousand inhabitants, and constituted 8·17 per cent. of the total deaths. In Paisley, on the other hand, the mortality from Heart Diseases was, during 1875, comparatively light, constituting only 3·25 per cent. of the total deaths, and removing only 9·1 from every ten thousand inhabitants. The rates given in Tables XI. and XII. for Glasgow do not materially differ from those for Paisley, which have just been quoted.

Diseases of the Respiratory System always furnish a very large number of deaths in these Annual Statements. In 1874, it was remarked that these diseases had been unusually prevalent; and, for 1875, we have now to record a mortality from Lung Diseases beyond all recent precedent. The deaths from these causes were 6839, being 22·26 per cent. of the whole deaths of the year. Out of every ten thousand inhabitants, the Eight Towns lost from these causes, 58·8. To these Pulmonary Complaints 24·32 per cent. of all deaths were ascribed in Glasgow, 23·81 per cent. in Dundee, 21·71 per cent. in Leith, 20·44 per cent. in Aberdeen, 19·38 per cent. in Paisley, 19·04 per cent. in Edinburgh, and 15·74 per cent. in Perth. Out of every ten thousand persons in Glasgow, there died from Lung Diseases 69·9; in Greenock, 58·7; in Dundee, 58·1; in Paisley, 54·4; in Edinburgh, 45·4; in Leith, 44·7; in Aberdeen, 43·3; and in Perth, 37·7.

The number of deaths referred to Bronchitis alone was 4811; while from Pneumonia the deaths were 1563; from Pleurisy, 80; from Laryngitis, 75; from Asthma, 151; and from Pulmonary Complaints (not otherwise defined), 159.

From Diseases of the Digestive System the deaths were 2106, being 6·85 per cent. of the total deaths, or 18·1 deaths to every ten thousand persons living. Diseases of this class appear to have been most fatal in Paisley and in Glasgow, and least frequent in Edinburgh and Dundee.

From Diseases of the Kidneys and of the Urinary System the deaths were 448. Deaths from these causes were more frequent in Perth, Aberdeen, and Edinburgh than in any of the other towns.

From Diseases of the Uterus (not including Metria) the deaths were 253; from Diseases of the Bones, Joints, and Apparatus of Locomotion, 220; from the Debility of Infancy or Premature Birth, 1537; from Skin Diseases, 36; from Malformations, 89; from Atrophy, 184; from Sudden Causes (not otherwise defined), 98; and from Violence or Privation, 1038.

There were besides 1232 deaths ascribed to Old Age. Of these, as in former years, a very large proportion were returned from Paisley.

Of the Violent Deaths, 49 were registered as Suicidal. From the direct effects of Intemperance there died 93; or, if 17 cases of Delirium Tremens (registered under the heading 'Diseases of the Brain') be taken into account, 66 persons may be said to died from poisoning with alcohol.

Of the 90 persons who died during 1875 at ages exceeding 90 years, 18 were males and 72 females. Two of the males were registered as 102 years old at the period of their deaths. One of them is stated to have been a tailor, the other a superannuated night-watchman.

MARRIAGES IN THE EIGHT TOWNS.

The number of Marriages during the year 1875 in the Eight Principal Towns was 10665. The estimated population of this Group of Towns at the middle of 1875 was 1171228; consequently for every ten thousand persons living in these towns there have been 91.15 marriages registered. This rate is below that deduced from the observations of the last ten years, which was very nearly 92 marriages for every ten thousand inhabitants. The marriage-rate of 1875 was lowest in Aberdeen and highest in Edinburgh. The rate for ten thousand persons was 74 in Aberdeen, 80 in Perth, 83 in Greenock, 91 in Leith and likewise in Dundee, 93 in Glasgow, 95 in Paisley, and 97 in Edinburgh.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

That extremes of temperature have a very decided influence upon the health of the people is a proposition the truth of which is very generally admitted. Extreme heat is but seldom found to occur in this country; and when it does prevail, it is only for a brief period, and consequently without very decided detriment to the public health. In fact, its lethal influence might pass almost unnoticed in our statements of the causes of death, were it not for the circumstance that the Diarrhœas and Bowel Complaints of children are commonly observed to become more frequent and fatal during a long-continued hot season. If, even for a week or two, during July or August, the temperature of the air is from 3 to 5 degrees above the mean, we are tolerably sure to find a corresponding increase in the number of deaths of children from Diarrhœa. It must, however, be noted that the increase of mortality is, in such cases, not sharply limited by the periods of time within which an excessive degree of heat has prevailed. On the contrary, the mischief due to the rise of temperature continues to be felt, it may even be for some weeks, after the air has resumed its normal condition. Extreme cold is, however, far more readily studied in connection with the frequency of deaths in Scotland. The spread and fatality of most of the Zymotic Diseases, of Diseases of the Brain, of Consumption, of the whole class of diseases of Respiratory System, are manifestly promoted by any considerable fall of temperature, or, at all events, by such a fall as causes the mean temperature of a particular month to be 3 to 5 degrees lower than

that observed as the average temperature of the same month during previous years. And as the diseases which we have instanced as promoted in intensity by low temperature actually comprise those which cause at least 50 per cent. of the deaths registered in Scotland, it is only natural to find that in average years the mortality of the seasons seems chiefly regulated by the amount of cold and wet. Hence, it may be roughly asserted that most of our deaths take place during our coldest months.

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1875, compared with the Mean of the Ten Years 1855-1864.

YEAR 1875.					1855-1864.

In the tabular statement exhibited in Table XIII., the nature of which has been fully explained in former Reports, the chief facts regarding the mean monthly temperature, and average monthly mortality of 1875, and of the ten years 1855–64, are epitomized. We see that the coldest month of 1875 was February, and that next in order of rigour followed December, November, and January; the greatest deviation from the decennial mean being in January, the temperature of which was $2^{\circ}5$ degrees above the average. The warmest month of the whole year was August. The temperatures of April, May, and September were very decidedly above the average of the corresponding months of former years.

In tracing the connection between temperature and mortality during the several months of 1875, it is necessary to make frequent reference to Table XIV., and it is right that our reader should be here reminded that the year 1874 had closed with a December of unprecedented severity, during which the daily average of deaths was 296.

In regard to the meteorological phenomena of the successive months of 1875, the following particulars are extracted from the Astronomer-Royal's Notes appended to our Quarterly Reports.

In *January*, the most notable feature was the high mean temperature, greater than the average (of 1856–74) by $2^{\circ}5$, and even more marked in physiological effects by coming immediately after the very low temperature of December 1874. January was further marked by a low and variable barometric pressure, large humidity of the air, large rainfall, and superabundance of south-west wind. The daily number of deaths was 305.

In *February*, the leading characteristic was the return of cold weather—almost as much below the average as January had been above it—and $3^{\circ}4$ absolutely lower than January. This cold was further accompanied by an extravagantly high barometer, scanty rain, and a most unusual amount of north-east wind. The daily number of deaths was 268.

In *March* the barometric pressure was higher than ever noted before, except in 1856, the first year of these records. It was accompanied also by dry air, scanty rainfall, and preponderance of north-east wind, though not to the degree of the previous month. The temperature was improved up to the average, or even a little beyond it. The daily death-rate continued at 268.

April was generally dry, sunshiny, and fine; but while in temperature there was very little difference between north and south, or east and west, in the depth of rainfall, there was a very marked deficiency along the east and north-east coasts of the country. The daily number of deaths was 230.

May was a month of high mean temperature, and was generally pleasant and salubrious, owing largely to the absence of north-east winds and the universal prevalence of west winds,—so high a number for west wind never having been registered for this month in any former year. That circumstance tended to increase the rainfall at westerly stations, but the drought of April still prevailed along the east coast. The daily number of deaths had fallen to 206.

June was a month of low barometric pressure, excessive variations of pressure, low temperature, large rainfall, and unusual preponderance of south-west winds. The daily deaths were 208.

July differed little from an ordinary July of former years. The mean temperature was slightly lower than the average, but the day temperature was higher, and the amount of sunshine greater. The daily number of deaths was 197.

In *August*, a rather late period, the highest mean temperature was reached in 1875; but the month was not otherwise remarkable, and differed little from its predecessor, though evidently having, with its greater amount of west wind, a less amount of sunshine, more cloud, less

range of temperature between night and day, more days on which rain fell, but less depth of rainfall. The daily deaths numbered 200.

In *September* the weather was generally fine and warm, with a mean temperature $1^{\circ}\cdot5$ higher than the average, but with much humidity in the air, a less number of days on which rain fell, but heavier rainfall, and rather less sunshine than the average. The daily deaths were 191.

In *October* the most salient characteristic of the weather was the long-continued, steady, unmitigated blow of south-east winds. The barometer was low, but very steady; the mean temperature rather above the average, as were likewise the number of rainy days and the depth of rainfall. The daily number of deaths was at its minimum, being 185.

In *November* the chief points in the weather to note are, first, the large quantity of north-east wind in place of the usual W.S.W., and then the sudden influx of steady cold, with snow towards the end of the month, producing so marked an effect on the mean temperature of the whole month as to bring it sensibly below the average of former years. There was a heavy rainfall, and the winds were stormy. The daily deaths were 212.

In *December* the weather suddenly came back to its normal type; for, although the month began with very low temperature, ice, and snow, the west and south-west winds presently set in, and made the latter part of the month comparatively mild in temperature. The amount of rain, wind, and cloud was about the average. The daily number of deaths was 226.

The influence of weather upon the fatality of various diseases and classes of diseases is illustrated by Table XV., but it must be noted that the details of that table apply only to the Eight Principal Towns. Similar information relative to the whole of Scotland cannot be given till the materials for constructing the Detailed Annual Report for 1875 are received and arranged in this office.

The most remarkable feature of Table XV. is the extraordinary mortality which it shows for the month of January. The deaths in January exceeded those in March—the next month in order of fatality—in the proportion of about 7 to 6. This excess may be traced in the number of deaths from the more frequent Zymotic Diseases, especially Scarlatina

TABLE XVII.—Monthly Deaths at Four Periods of Life in the Eight Principal Towns of Scotland during the Year 1875, and proportion at each Age in every hundred Deaths per Month.

and Hooping-cough, in the number of persons who perished by the ill-defined complaints of Old Age, but, above all, in the unusual prevalence of the whole class of Diseases of the Respiratory System. Yet the month of January, as has been already stated, should not, from its meteorological features, have appeared to be more unhealthy than an average January. The cause of the unusual mortality is found in the inclemency of the month of December 1874, which had favoured the spread and increased the malignancy of several epidemic diseases, and had caused a vast number of cases of Bronchitis, Pneumonia, &c., which had not run their fatal course till after the conclusion of 1874, and, of course, serve to swell the fatal account of January 1875.

Proceeding to examine the recorded incidence of the more common diseases, we find that Small-pox numbered very few victims during 1875, and that by the end of the year its presence in the Principal Towns was rarely marked by a death.

Scarlatina had been very destructive towards the end of 1874. In January 1875 it caused 227 deaths; but the violence of the epidemic seemed thereafter rapidly to decline, so that in May the deaths from this cause were only 77. During the autumn months the force of the epidemic was revived; during October and November it caused 163 and 177 deaths, and in December 115.

Hooping-cough, as might naturally have been expected of a disease the danger of which is much aggravated by complication with Bronchitis and Pneumonia, was most destructive during January, when it caused 152 deaths. As the year advanced, the deaths from Hooping-cough, although fluctuating a little in frequency, on the whole decidedly decreased; but after October, the approach of winter, no doubt, caused them to become again more numerous.

The mortality from Measles had its maximum in June and July; but this disease cannot be said to have been very prevalent at any time during 1875.

The deaths from Fevers were not numerous, and in June and Novem-

TABLE XVIII.—Months equalized to 31 days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1875.

ber—the most fatal months—only amounted to 77 and 76. In the month of January there were only 51 deaths from Fevers of all kinds.

The deaths from Diarrhœa were as usual obviously connected with the prevalence of hot weather. They were 253 in August, when the mean temperature was $58^{\circ}9$; 197 in September, with the temperature of $54^{\circ}8$; and 126 in July, with a temperature of $58^{\circ}1$. The minimum number of deaths from Diarrhœa was 33, and was observed in February, the coldest month of the year.

Consumption was more than usually fatal. The deaths ascribed to it were 363 in March, 359 in June, but only 231 in October, and 198 in September.

The deaths from Diseases of the Respiratory System amounted in January to 1195, being more than double the number registered during January 1874, and only 63 less than the unprecedented mortality from Pulmonary Complaints recorded in December 1874. In February the deaths had fallen to 775, and they continued to fall in each successive month till in September they had reached the minimum of 278. During the last three months of the year, no doubt in consequence of the cold, ungenial weather, so trying to the “poitrinaire,” the number of deaths from Lung Diseases began again to mount, being 400 in October, 531 in November, and 767 in December. That the whole year, 1875, was marked by a most unusual frequency of death from Chest Complaints is plain from the fact that in the Eight Principal Towns the deaths from Diseases of the Respiratory System were in 1874, 6344, but in 1875, 6839, or more numerous by 495.

The influence of season upon the number of deaths at each of four periods of life is illustrated by Tables XVII. and XVIII.; but it must be understood that the numbers refer only to the Principal Towns of Scotland.

Of those who died before completing the first five years of life, 1265 were cut off in January, which was the most fatal month to persons of this early age. The deaths in February were 1244, 1179 in March, and 1155 in April. In August and September the usual prevalence of Diarrhœa among children caused the deaths to mount to 1199 and 1108. October was decidedly the most healthy month of the whole year for children, the deaths having numbered only 988. In the above statements, as well as in those which follow, the monthly deaths in the short months have the necessary correction applied, so that the months are comparable as of the uniform length of 31 days.

Of those who died at ages between five and twenty years, 355 perished in June, 342 in April, 334 in January, 316 in November, and 305 in May. December with 259 deaths, October with 256, and September with 234, were decidedly the most healthy months for adolescents.

To adults, that is to persons aged between 20 and 60, January was the most fatal month, the equalized number of deaths being 1159. Next in order of fatality were March with 931, and February with 917 deaths. August, October, but especially September, appears to have been the months most favourable to adult life, the number of deaths in these months, taken in the above order, having been 615, 618, and 588. The deaths in the winter months, November and December, were among adults rather less frequent than those registered in May and April.

To the aged, under which term are included all persons above the age of 60 years, January was very trying; the deaths amounting to 806, not much less than the unusual mortality registered in December 1874. As in

the case of adults, the months of March and February, with 626 and 578 deaths respectively, were likewise marked by very numerous deaths among the aged. From April to October the mortality among the aged became gradually mitigated, the number of deaths falling from 448 in April to 284 in October. It is not unnatural to find that the setting in of cold weather in November and December caused an immediate and decided increase in the number of the deaths of aged people. 437 perished in November and 487 in December.

ELEVENTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1874.

IN the following Report it is our duty to present information regarding the vaccination of the children born in Scotland during 1874, to point out the amount of protection that has been afforded to these children by the working of the Scottish Vaccination Act, and to call attention to certain circumstances

TABLE XIX.—VACCINATIONS in SCOTLAND, 1864–1874, and proportion to the Births each year.

which have prevented the full benefits of the process of vaccination from being extended to a larger proportion of the infant population of the country.

It is customary to explain why our Vaccination Report always appears to be twelve months in arrear of the Report of the Births, Deaths, and Marriages, along with which it is published. The fact is, that the Vaccination Report must always bear reference to children born a year before it can be constructed. The performance of vaccination is not enforced by law till six months after the birth of a child; the collection and tabulation of the facts contributed by the various Registrars require some time, and it is consequently quite impossible to publish in April 1876 any proper account of the working of the Scottish Vaccination Act during the last few months of 1875. It is far better to confine attention to the children born during 1874, regarding whose vaccination it may be assumed that all necessary details are forthcoming.

The number of children whose births were registered in Scotland during 1874 was 123861. Of these children, 108022, or 87·213 per cent. of all born, have been successfully vaccinated. In 1229 instances, or in 0·992 per cent. of those born, vaccination was on medical authority postponed. In 444 children, or 0·358 per cent. of the total births, insusceptibility of vaccination was certified. In 238 of these cases there can be little doubt that the insusceptibility was real, 33 of the children having already had Small-pox, and 205 having been already vaccinated, though not in strict accordance with the provisions of the Vaccination Act. But regarding the alleged insusceptibility of 206 children, or 0·166 per cent. of

all born, we shall presently offer a few remarks. 11288 children, or 9·114 per cent. of all born, died unvaccinated before the age at which vaccination becomes obligatory. 2878 children, or 2·323 per cent. of all born, are presumed to have remained unvaccinated after the expiry of the statutory period of six months after birth, and in their cases the intentions of those who framed the Vaccination Act were defeated.

From Table XX., we exclude all account of the 11288 children who died unvaccinated under six months of age, and we then attempt by means of the remaining figures (which are of course easily obtained from Table XIX.) to ascertain the number and proportion of living children to whom, before they had arrived at the age of six months, the Vaccination Act has been the means of securing the benefits of vaccination.

By means of Table XX., we learn that during the year 1874, out of 112573 children who were alive six months after their births, 108022 had received certificates of successful vaccination, or in other words, 95·958 per cent. of children six months old had been vaccinated. In 1229 cases, or in 1·092 per cent. of those living at the age of six months, the performance of the operation had, for medical reasons, been postponed. In 444 cases, or 0·395 per cent., insusceptibility was certified. In 238 cases this alleged insusceptibility was no doubt real, being in 205 instances due to the previous performance of the operation of vaccination by irregular practitioners whose certificates could not be held as valid, and in 33 instances being due to the children having had attacks of Small-pox. But in 206 cases, *i.e.* in 0·183 per cent. of all who arrived at the age of six months, "Constitutional Insusceptibility" was certified to exist. Now, it is important to observe that in the experience of those who conduct vaccinations on the largest scale in our dispensaries and vaccine institutions, the existence of "Constitutional Insusceptibility" has no place. The general belief among such authorities is that after an apparent failure of the operation, or indeed after two or three successive failures to vaccinate the same child, renewed attempts will be finally rewarded with success. Whether "Constitutional Insuscepti-

TABLE XXI.--Deaths from Small-pox in Scotland, 1855-1875.

* For 1873, 1874, and 1875, the Small-pox Deaths are estimated from the ascertained Small-pox Deaths in the Principal Towns, as compared with the Total Small-pox Deaths in all Scotland during the eighteen years, 1855-1872.

bility” has any real existence or not, there cannot be the least doubt that it is a term rather loosely employed in our vaccination certificates, and that it should merely be received as record of the fact that, a qualified practitioner has made two or three unsuccessful attempts to vaccinate a child. It is to be feared that these certificates of “Constitutional Insusceptibility” do positive mischief by deluding parents and guardians into the belief that their children are protected against Small-pox, and that in their cases attempts at re-vaccination would be superfluous.

In 2878 cases, or in 2·556 per cent. of those that attained the age of six months, no record of vaccination was obtained. It would perhaps be too much to assert that none of these 2878 children have received, or are likely hereafter to receive, the protection which vaccination confers. But it is our duty to give this as the number of instances in which, during 1874, the provisions of the Vaccination Act were found insufficient to secure the vaccination of children born during the previous year. The principal causes that interfere with the operation of the Act in these cases is the nomadic life of the class of tramps and vagrants, in consequence of which a certain number of children are annually removed from the observation of the Registrars before the lapse of the period during which their vaccination is not obligatory upon parents or guardians. To reduce the number of those “unaccounted for,” and, therefore, probably “unvaccinated,” it seems of the utmost importance to curtail the period during which children may remain unvaccinated. We have repeatedly expressed our opinion that the period should be reduced from six months to four, and we once more record here our conviction that the Legislature has it in its power, by fixing on the shorter period, considerably to diminish the frequency of the failure of the Vaccination Act, consequent upon removals of parents and guardians. In order to quiet the scruples of those who may hesitate to authorize the vaccination of very young children, it is merely necessary to remark that the statutory limit of time is in *England* “three” months; and that if we suggest “four” months as the limit in *Scotland*, it is chiefly from considering the geographical position of many of the more sparsely-peopled districts of the country, in which the transport of a very young child to a distant station for the purpose of having it vaccinated might involve some degree of danger, or at least of hardship.

On examining, in Table XX. the columns headed Vaccination Post-

TABLE XXII.—SMALL-POX DEATHS in the Eight Principal Towns of Scotland at different Ages in 1875, also during the Ten Years, 1865–1874, compared with those of the Ten Years, 1855–1864, in the same Towns before the Vaccination Act came into operation.

poned, it may be seen that, in 1874, the vaccination of 1229 children was postponed. This number is far too large, and a glance at the Table will show that of late years it has been manifestly increasing. In 1866 the proportion of "postponements" to the number of children surviving six months after birth was only 0·556 per cent., while in 1874 it was 1·092 per cent.

The most frequent cause of these postponements is the indisposition of the child in consequence of some of the infantile disorders connected with teething. Now, if parents and guardians could be induced to have their children vaccinated before the completion of the fourth month of life, a most fruitful source of postponements would at once be removed. But it is to be feared that, at all events among the poorer classes, there exist habits of procrastination, which induce them too often to take no steps to have their children vaccinated till the last legal moment, and to wait in fact till they receive a statutory reminder from the Registrar, calling attention to the penalties which further delay will occasion. In such circumstances it is believed that no small number of children six months old are presented for vaccination, and in consequence of the presence of some teething-rash or other infantile complaint, are judged not in fit condition to be subjected to the operation of vaccination, and hence tend to swell the list of "postponements." It is quite plain that by curtailment of the period during which the vaccination of children is not obligatory, almost all the postponements that are at present due to the disorders connected with teething might be got rid of; and, were it merely in order that postponements should become less frequent, we should be disposed to advocate the period of four months as the maximum during which a child should be permitted to remain unvaccinated.

In reference to the mortality due to Small-pox in 1875, it is satisfactory to observe that it was small, probably not exceeding 93 deaths in the whole of Scotland. It must, however, be remarked that the numbers given for the years 1873-4-5 in the fourth column of Table XXI. are merely *estimated* numbers, the accuracy of which rests on the supposition that the relative frequency of death by Small-pox in the Eight Principal Towns, and in the whole country, remained during 1873-4-5 the same as during the eighteen immediately preceding years, the corrected returns for which have appeared in our Detailed Annual Reports.

In the Eight Principal Towns the Small-pox deaths during 1875 were only 50 in number. In Table XXII., these deaths will be found arranged so as to exhibit the proportionate numbers that occurred at each of four periods of life; and in succeeding columns these numbers are contrasted, first with the Small-pox deaths in the Eight Towns during 1865-74, and finally with the Small-pox deaths recorded in the same Group of Towns between 1855 and 1864, *i.e.* before the Vaccination Act came into operation.

The number of Small-pox deaths for 1875 is far too small to warrant any very confident conclusions from the details of Table XXII. But the very fact that these numbers are so small is probably the best proof that could be adduced that the working of the Scottish Vaccination Act continues very satisfactory.

At page 76 of the Appendix, we again insert the Table which was for the first time given in our Report for 1874, and which affords a sufficiently comprehensive view of the working of the Vaccination Act

for the ten years terminating with 1873. Its statements are in the form of an annual average, applicable to the whole of Scotland, and to each of the Eight Divisions and Thirty-three Counties into which it is divided.

I have the honour to be,

SIR,

Your most obedient Servant,

WILLIAM ROBERTSON, M.D.

XI.—ABSTRACT of the METEOROLOGY of the Eight Principal Towns of Scotland during the several Months of the Year 1875.

Mean Height above the Sea-level, 111 feet. Mean North Latitude, 56°12'. Mean West Longitude, 3°30'.

1875.	BAROMETER.		SELF-REGISTERING THERMOMETER.						HYGROMETER.		DEDUCTIONS from Glaisher's Tables, 2d Edit.				RAIN.		WINDS.										Pressure on square foot.
	Mean at 32° and Sea-level.	Monthly Range.	Highest in Month.	Lowest in Month.	Mean Temperature.	Monthly Range.	Mean Daily Range.	Greatest Daily Range.	Dry Bulb, or Mean Temp. of Air.	Wet Bulb, or Temp. of Evaporation.	Dew-point Temperature.	Elastic Force of Vapour.	Wt. of Vapour in Cubic Foot of Air.	Humidity. Sat. 100.	Number of Days it fell.	Amount.	Number of Days it blew in certain Directions.

APPENDIX.

VACCINATIONS, 1874.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

1. SHETLAND.

10. (2.) WHITENESS AND WEISDALE.—The unusual number of outstanding cases (14) arises from the indisposition, during the last three or four months, of the Vaccinator. A substitute is to be appointed by the Parochial Board, and those unvaccinated will be visited forthwith.

2. ORKNEY.

33. (1.) WESTRAY. — Vaccination was suspended for some time owing to an epidemic of Measles.

4. SUTHERLAND.

48. DURNES.—Parents very willing to have their children vaccinated, but a great number had the operation postponed from eruptions of the skin.

51. GOLSPIE.—Vaccination very regularly attended to, and scarcely any trouble is given to the Registrar in reminding parents of their duty.

53. LAIRG.—Vaccination carefully attended to. Some of the parents are shepherds, who are 20 miles from the place where the Vaccinator attends; yet these are seldom in the list of defaulters. It is never found necessary to send a list to the Parochial Board, the Registrar's notice being sufficient to call the dilatory to a sense of their duty.

II. NORTH-WESTERN DIVISION.

5. ROSS AND CROMARTY.

Mainland.

58. (1.) APPLECROSS.—There has been no registered medical officer since May last until very recently. The medical officer who has been appointed makes a weekly visit (weather permitting), and it is hoped matters will be more satisfactory.

66. (2.) SOUTHERN DISTRICT OF GAIRLOCH.—Vaccination better attended to than in any previous year, but the Registrar is still obliged to send repeated notices to defaulters before they comply. Not to say anything of the "shilling" due, he never gets even the postages for these circulars. So ignorant are some of the parents, that one man, after keeping the certificate of the successful vaccination of his child for six months

in his possession, came forward and swore that it was given in to the Registrar, when it was found wrapped up in a dirty paper in his coat pocket.

73. KNOCKBAIN.—One prosecution for default was conducted in the Sheriff-Court,—the first in the parish since Vaccination became compulsory. The fine which was imposed in this case will tend to make others more careful in future.

Insular.

88. STORNOWAY.—Scarlatina, very prevalent especially during the last six months, caused the vaccination of so many children born in 1874 to be postponed. The disease is still raging and fatal in many cases.

89. UIG.—The reason for 15 of the children born being entered under col. 7 is that there is no Vaccinator for the parish. The Registrar has brought the matter before the Parochial Board.

6. INVERNESS.

Mainland.

91. ARDERSIER.—Notices have very frequently to be sent to parents on the expiry of the six months prescribed, but the Registrar believes, that in many cases, this is owing in great measure to the Vaccinator. The provisions of the Act, however, are on the whole well attended to.

97. (1.) GLENELG.—Act, upon the whole, works well. In some cases the Registrar finds it necessary to issue second notices before the children are vaccinated, but he is never under the necessity of making up a list of defaulters for the Parochial Board.

99. (1.) GLENGARRY.—Parents require to be reminded sometimes more than once before they get their children vaccinated, even although they are well told at the time of registration, when Schedule (D) is put into their hands. Many have very long distances to go to the Vaccinator, which entails considerable trouble and expense. Some parts of their journeys are across hills, where there are almost no roads, or these are very imperfect; and, if the weather be severe, there is a good deal of risk both to mothers and children. The Parochial Board have, however, obviated these difficulties so far, by appointing certain days, once in four months, for the doctor calling, and the people attending with their children at certain places.

Insular.

108. **BARRA.**—Of the seven entered under col. 7, the Vaccinator says that the parents failed to attend on the day fixed for vaccination.

111. (1.) **HARRIS.**—Arrangements are being made to compel defaulters to fulfil duly and in all cases the requirements of the Statute.

114. (2.) **RAASAY.**—Vaccination is still very irregularly attended to. The last list of defaulters contained over 30 names, and the Registrar is not yet aware what steps have been taken by the Board to amend matters.

116. **SMALL ISLES.**—All the children born in 1874 were vaccinated, but the Vaccinator did not grant certificates until the weather would enable him to go round the four Islands comprising the parish the second time.

118. (2.) **HOWMORE.**—The Registrar has good authority to say that most of those marked in col. 7 have been vaccinated, although the certificates have not yet been given in.

119. **STRATH.**—The prevalence of epidemics is to a certain extent the cause of so many defaulters appearing in col. 7. The result, however, considering the state of the parish, is very satisfactory,—at least the local authorities consider it so.

III. NORTH-EASTERN DIVISION.**8. ELGIN (OR MORAY).**

134. **EDINKILLE.**—The Vaccinator attends, within the parish, four times a year, for the purposes of the Act.

9. BANFF.

148. **BOTRIPHNY.**—The Registrar has very little trouble in getting in the Schedules, but thinks it would suit better if only three months instead of six were allowed.

153. (1.) **FORDYCE.**—Generally speaking the provisions of the Act are willingly complied with. The Registrar finds that the most successful cases are those of children who are vaccinated within three and a-half months after birth. Beyond that period, through teething and its attendant distempers, postponements become the rule, and immediate success the exception.

10. ABERDEEN.

203. **INSCH.**—The Registrar would respectfully suggest that it might be an improvement if Schedule (C) were so re-arranged as to secure the classification of insusceptible cases by the Vaccinator or other medical practitioner.

241. **STRICHEN.**—The harmonious working of the Act is the result of the admirable arrangements of the Vaccinator. Under similar arrangements in every parish, the Act would be a complete success.

249a. **UDNY.**—Immense deal of trouble in obtaining the Schedules, especially in the case of the working classes, whose addresses are always changing. Remuneration by far too small, being only 3d. for each vaccination.

IV. EAST-MIDLAND DIVISION.**12. FORFAR.**

282. (2.) **ST. MARY (DUNDEE).**—Although defaulters have been pretty numerous during 1874, still the people seem more alive to the requirements of the Act. The Registrar continues of opinion that the period allowed for vaccination

is too long. Removals frequently take place within the six months, and were the period shortened to three or even four months, fewer notices would require to be sent, and defaulters would be more easily found.

282. (4.) **ST. ANDREW (DUNDEE).**—Much labour and attention on the part of the Registrar are required to secure the carrying out of the Act. A great proportion of the parents delay sending in the certificates till after the statutory notice is sent them, and when asked the cause of delay, blame the medical men for putting them off by saying it would be time enough to vaccinate after they got the Registrar's notice. In a great many cases this putting off necessitates postponements, and consequently causes needless trouble to both parents and Registrar. The Act is now so well understood that the ten days' grace should be abolished, which, if done, would remove one great cause for the carelessness of both parents and some medical men, and endless trouble to Registrars.

282. (5.) **LOCHEE (DUNDEE).**—Requirements of the Act upon the whole tolerably well complied with, although the under-paid Registrar has substantial reason for complaining of the filling up and despatching not much short of 150 defaulters' notices in the course of one year, for which he does not receive a "plack."

299. **KIRRIEMUIR.**—Parents and guardians in many instances had to be reminded as to the requirements of the Statute; but considering the extent of the parish, and that many have to come a long distance, vaccination is in general well attended to.

319. **ST. VIGEANS.**—The vaccination of every child has been accounted for, and the only thing remarkable is the very large number of postponements that have taken place during the year. Certificates of postponement amounting to fully one-fourth having been returned.

14. FIFE.

442. **KIRKCALDY.**—Though there is considerable difficulty in getting in the required certificates, the Act is working well.

V. WEST-MIDLAND DIVISION.**17. STIRLING.**

490. **STIRLING.**—A large proportion of the children who have left the district are illegitimate. Out of many notices to parents issued during the year, in no case has the shilling been paid. So far as the remuneration of the Registrar is concerned, it is a dead letter, although useful as a threat. The remuneration of Registrars generally, and specially in regard to vaccination, requires revision.

18. DUMBARTON.

501. **OLD OR WEST KILPATRICK.**—On account of the population employed in a large shipbuilding yard being migratory, a number of the cases are unaccounted for.

19. ARGYLL.*Mainland.*

508. **CRAIGNISH.**—Parents generally anxious to comply with the terms of the Act, but the Vaccinator being resident at some distance from the parish, advantage is taken of this in some cases to delay having the operation performed.

519. **KILLEAN AND KILCHENZIE.**—In one case successful vaccination was effected after six

failures. One defaulter has been duly reported to the Inspector of Poor.

525. (1.) LISMORE.—This being a wide district, the greatest difficulty is experienced in getting vaccination performed within six months. The small fee of 3d. is quite inadequate for the expense and trouble in sending circulars perhaps on three or four occasions to the same party.

528. MORVERN.—Although it may be fairly stated that parents are generally willing to have their offspring vaccinated in conformity with the Act, yet there being no medical practitioner residing within the parish, it cannot be reasonably expected that women and infants can, in a district so rugged and extensive, attempt to move either by sea or land to have the operation performed.

VI. SOUTH-WESTERN DIVISION.

21. RENFREW.

560. CATHCART.—A great many parents retain the vaccination certificates after they have been filled up by the medical practitioner, and forget all about them.

22. AYR.

582. COLMONELL.—The moving habits of the Irish navvies employed upon the construction of a railway through the parish explains the four entries under "removed from the district before vaccination."

586. DALMELLINGTON.—The Registrar requires to issue many notices to remind parents to return the schedules. During the year many parties have removed without returning the certificates.

587. DALRY.—During 1874 Scarlatina was prevalent, and the mortality among children under six months (the period allowed for vaccination) was above the average.

590. (2.) TROON.—Among the poorer class parents often require to be reminded of the requirements of the Act. Were medical officers paid a small fee for vaccination certificates, the defaulters might be fewer.

600. KIRKMICHAEL.—One has failed to return the vaccination certificate on account of inability to pay the surgeon's fee. The Registrar expects to receive it from the Inspector of Poor.

613. SORN.—The Vaccination Act is working very satisfactorily.

617. STRAITON.—Sometime the certificate of postponement is a few days late; but, on the whole, the Act works well.

23. LANARK.

638. (2.) DALSERF.—On the whole the Vaccination Act works perfectly well in this district, the defaulters in the half-yearly list being principally those who have removed from the district before vaccination.

639. DALZIEL.—The certificates do not come in so freely as they might. A considerable number of parents never think of forwarding them until they receive the Registrar's notice; this often occurs, although the parents have had the certificate for months filled up and ready. It is hopeless to expect to get a shilling from those who exceed the statutory ten days.

648. LANARK.—Vaccination is generally well attended to.

VII. SOUTH-EASTERN DIVISION.

24. LINLITHGOW.

669. LIVINGSTONE.—The vaccination certificates continue to be sent in regularly either by

the parents or Vaccinator. It is very seldom necessary to send out a notice.

25. EDINBURGH.

681. CRICHTON.—The Vaccination Act continues to work well.

690. KIRKNEWTON AND EAST CALDER.—It is with considerable difficulty that the vaccination is performed and certified within the prescribed time. The parents lay the blame on the Vaccinator. The Registrar has more difficulty with the vaccinations than with the whole of the other registrations put together.

691. LASSWADE.—The Vaccination Act works well; but the continual movement of the population in the mining districts causes a great amount of watchfulness and work to the Registrar.

698. RATHO.—The difficulty of obtaining the vaccination certificates has been very great, chiefly owing to the dilatoriness of the doctor.

701. WEST CALDER.—Owing to the closing of four paraffin oil works, the population has been considerably reduced.

26. HADDINGTON.

720. SPOTT.—Some parents, whose children had been vaccinated, refused to take them to the Vaccinator to get a certificate that the operation had been successful.

27. BERWICK.

730. CHIRNSIDE.—The Vaccination Act continues to work successfully in this parish.

732. COLDINGHAM.—At the expiry of the six months allowed for vaccination, the Registrar has frequently to write to parents.

739. EYEMOUTH.—The careful and efficient working of the Vaccination Act entails on the Registrar a very great amount of labour and responsibility, for which the remuneration is marvellously little. Several cases of postponement have continued for nearly a year; and many of the parents require to be reminded of their duty by the Registrar's notice pursuant to sect. 17.

29. SELKIRK.

776a. KIRKHOPE.—In a few cases the six months have fully expired; but in none have parties ever shown the slightest unwillingness to comply with the provisions of the Act.

VII. SOUTHERN DIVISION.

30. ROXBURGH.

810. WILTON.—By the return it will be seen that the working of the Act during 1874 has been very satisfactory. In the case of the one postponed vaccination, the Registrar is informed by the medical attendant that there is little probability of the child being fit for vaccination for a year at least. In such cases it is hard to put the parent to the trouble and expense of renewing the certificate of postponement every two months.

31. DUMFRIES.

822. DUNSCORE.—The Vaccination Act is still working successfully, all the parents being anxious to comply with its requirements.

850. TORTHORWALD.—Summonses require to be issued far too often. The case entered in col. 7 may be cited as a specimen of the work sometimes to be gone through. The parents had left the district, but their residence was found out, and a summons was duly despatched per post. As no certificate was forthcoming, I communicated with the Inspector for the parish to which they had removed, but he did not even

condescend to reply. The mother, with the child, happening to be revisiting this district, and accidentally meeting her, I directed her attention to the case. She informed me that the child was vaccinated, exhibiting the arm in proof, and that the doctor, when she paid him, took in hand to forward to the Registrar the proper schedule.

wrote the doctor, but neither has he deigned to reply. Postponements too are becoming the order of the day. This year they are exactly two and a half times the average for the five previous years.

32. KIRKCUDBRIGHT.

856. BALMACLELLAN. — Although there have

been some cases of postponement three or four times, and in one case six times, vaccination has been well attended to; but the work is badly paid.

33. WIGTOWN.

893. NEW LUCE. — The Act is working well; but occasionally the Registrar has to send the "notice." It seems strange that he is not entitled to charge for so doing unless the parties are convicted. His labour is all the same. It is possible the defaulting parents would look sharper after the time of vaccination, if they had to pay one shilling for the "notice" when the statutory period had elapsed.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
59b	Carnoch	Parts of Contin, Fodderty, and Urray.
71b	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
86b	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir, (2) Rest of Kilmuir and part of Snizort.

		Corsock-Bridge, . . . 862		

* The actual number of Districts is 1028—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place *compound* names in the order in which they are pronounced.

REPORT.

TO THE

RIGHT HON^{BLE}. R. ASSHETON CROSS, M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 29th March 1877.

SIR,

IN accordance with the requirements of the Scottish Registration Act (17 and 18 Vict. cap. 80), I have now the honour to submit to you a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1876, which has been prepared in the usual form, with a view to its being laid before Parliament.

I have also the honour to submit, in accordance with Section 19 of the Scottish Vaccination Act (26 and 27 Vict. cap. 108), the Twelfth Annual Report on Vaccination, in which the usual details are given relative to the Vaccination of Children whose Births were registered in Scotland during the year 1875. In this Report is contained all available information regarding the working of the Scottish Vaccination Act from 1865 to 1875 inclusive, together with details as to the number of Deaths from Small-pox that have been registered in Scotland during each year from 1855 to 1872, and the *estimated* numbers of such Deaths during the four years 1873–1876.

It will be observed that during 1876 the mortality due to Small-pox has been comparatively trifling. Still, the recent epidemic prevalence of Small-pox in 1872–1873, and the still

more recent spread of the disease in some of the great towns of England make it only too probable that Scotland may ere long again suffer from this loathsome pestilence; for we cannot flatter ourselves that the existing Vaccination Laws will be found a perfect prophylactic.

I have accordingly felt it my duty once more to point out how desirable it is to diminish the proportion of those who are at present allowed to escape the provisions of the Vaccination Act. It appears to me that the readiest means of effecting this object may be applied by abridging the period after birth, during which parents and guardians may, without incurring penalty, suffer the children for whom they are responsible to remain unvaccinated. To this proposal, which in fact merely suggests an assimilation of the law in Scotland to that now in force in England, I have reason to believe that medical men in general would have no objection; while the possible opposition of the opponents of Vaccination is not likely, in Scotland, to be of the slightest consequence. In this country the Vaccination Act has hitherto been administered without encountering any opposition from the efforts, either of associations or of individuals, to discredit Jenner's great discovery and the efforts of the legislature to make it readily available for the public good.

I have the honour to be,

SIR,

Your most obedient Servant,

W. PITT DUNDAS,
Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY WILLIAM ROBERTSON, M.D., F.R.S.E.

SIR,

IN the report which I have the honour to submit there will be found the usual details regarding the Births, Deaths, and Marriages registered during 1876 in the 1029 Registration Districts of Scotland. Appended to the General Annual Report is the Twelfth Report on Vaccination, in which is contained all available information regarding the working of the Scottish Vaccination Act, and more especially in relation to the Vaccination of children born in Scotland during 1875.

The estimated population of Scotland at the middle of 1876 was 3,527,811 persons. During the year there were registered 126749 Births, 74122 Deaths, and 26563 Marriages; hence, for every thousand of estimated population there have been 35·9 births, 21·0 deaths, and 7·5 marriages. These numbers, when compared with the corresponding figures in Table II., which exhibit the experience of Scotland during the last ten years, show that the birth-rate of 1876 has considerably exceeded even that of 1874, which was regarded as unusually high; that the death-rate has been the lowest experienced since 1861, and, of course, far within the average rate of the last ten years; and that marriages have taken place at a rate considerably exceeding the average of the ten years, though not

TABLE I.—Population estimated to the middle of each year, with the number of Births, Deaths, and Marriages registered in Scotland during each of the years 1855 to 1876, and their proportion to the Population; also the excess of Births over Deaths, the number of Illegitimate Births, and their proportion to the total Births.

quite coming up to the rate that prevailed in 1873 and 1874. The natural increase of the population of Scotland, apart from the disturbing influence of emigration and immigration, must, during 1876, have been great, and the frequency of marriages during the last five years renders it probable that this increase will be next year sustained.

BIRTHS.

126749 Births were registered in Scotland during 1876, being at the rate of 3·59 per cent., or of 359 for every ten thousand of estimated population throughout the country at large. The numbers and proportion of Births recorded in each of the Five New Groups of Registration Districts are exhibited in Tables IV. and V. 44245 births took place in the Eight Principal Towns, 15451 in the Large Towns, 29778 in the Small Towns, 33792 in the Mainland-Rural Districts, and 3483 in the Insular Group. When the estimated population of each Group of Districts is taken into account, it appears that the birth-rate of the Large Towns has as usual been the highest, being 4·41 per cent.; that in the Small Towns, it has likewise been at the exceptionally high rate of 3·72 per cent.; that in the Eight Principal Towns, the rate, 3·70 per cent., has been a trifle lower than usual, and that the birth-rates of 3·21 per cent. in the Mainland-Rural, and of 2·69 per cent. in the Insular-Rural Districts have been somewhat in excess of the rates experienced in 1875.

Of the 126749 births, 10870 were illegitimate; thus, as in 1875, of all births in Scotland, 8·6 per cent. belonged to this class. In the Insular-Rural Districts the illegitimate constituted only 4·91 per cent. of the total births; in the Large Towns the proportion of illegimates was 7·05 per cent.; in the Small Towns, 7·92 per cent.; in the Principal Towns, 8·36 per cent.; and in the Mainland-Rural Districts, 10·51 per cent.

The relative frequency of illegitimate births in the various Divisions and Counties of Scotland is stated in Table VI. It appears that the North-Eastern and Southern parts of the country furnish the greatest proportion of illegitimate births, while in the North-Western and West Midland parts the proportion is far less formidable. In Shetland only 3·9 per cent. of the births were illegitimate; in Ross and Cromarty the rate was 4·6 per cent.; in Orkney, 5·0 per cent. In other three counties, viz. Clackmannan, Dumbarton, and Renfrew, the rate was under 6 per cent. In nineteen counties the rate was between 6 and 12 per cent.; being 6·4 per cent. in Stirlingshire, and 11·4 per cent. in Roxburgh. In eight counties the rate of illegitimacy exceeded 12 per cent.; being in Kincardine, 12·1

TABLE III.—Births, Deaths, and Marriages in each of the Eight Divisions of Scotland during the Year 1876, and their Proportion to the estimated Population.

were males and 61822 females. For every 100 female births there were, consequently, 105 male births. The preponderance of male births was most marked in the Group of Insular-Rural Districts, in which 110·3 boys were born for every 100 girls; while in the Principal and Large Towns, the male and female births were to each other in the proportion of only 104·6 to 100. At the Census of 1871, for every 100 females enumerated in the Eight Principal Towns of Scotland, there were found to be about 88·6 males; while the population of the Insular-Rural Districts of the country consisted of only 86 males for every 100 females. There is good reason for believing that, during the last few years, the relative preponderance of male births over female births among the Scottish Islanders has tended to compensate for the disproportionate numbers of males and females living in our Insular-Rural Districts at the last period of Census.

Births were most numerous during the month of May, when, on an average, 381 per diem were registered. They were least numerous in December, when only 324 registrations per diem took place.

DEATHS.

The number of Deaths registered in 1876 was 74122, being in the proportion of 210 to every ten thousand of estimated population, or at the rate of 2·10 per cent. This death-rate is a very moderate one—well within the average of former years—and, in fact, the lowest death-rate recorded in these Reports since 1861. Various causes, no doubt, concurred in lessening the general death-rate during 1876, and to some of these it will be necessary to allude in the subsequent pages of this Report, and in the more detailed statements which will be hereafter prepared, when the causes of the whole deaths in Scotland can be analysed. Meanwhile, it is sufficient to point out that the amount of epidemic disease prevalent in our Principal Towns has been remarkably small, and that consequently the number of

TABLE VII.—Births, Deaths, and Marriages, and their Proportion to the Population, in the Eight Principal Towns of Scotland, during each of the Years 1855–1876.

1876	1,194,357	44,245	3·70	27,971	2·34	10,735	0·90

The numbers for 1873, 1874, 1875, and 1876, are made up from the Quarterly Returns; the remainder from the Detailed Annual Reports, where the figures are corrected.

deaths, particularly at early ages, has been unusually low. No doubt, it will be found that the same exemption from severe epidemic mortality which the Principal Towns have enjoyed has been likewise felt in most districts of the country. The total deaths in February averaged 242 per diem, but in October there were only 166 deaths per diem.

In the Large Towns the death-rate was 258 for every ten thousand of estimated population—a rate far below that recorded for the years 1854 or 1855. In the Principal Towns the rate was only 234 for every ten thousand inhabitants, and was, of course, much below the average of previous years. In the Small Towns, Mainland-Rural, and Insular-Rural Districts, the rates were 210, 173, and 164 for every ten thousand of their respective populations. These figures indicate a mortality less severe than that of 1875, or even than that of 1874; but it may be remarked that the difference in favour of 1876 is far more marked in the cases of the Large Towns and Principal Towns than in those of the other Groups of Districts.

MARRIAGES.

26563 Marriages were registered during 1876, being at the rate of 75 marriages for every ten thousand of estimated population. This proportion is considerably above the average of former years, and has only been twice exceeded during the last twenty-one years, namely, in 1873 and in 1874. It may probably be held as an indication that the country has during the past year enjoyed a fair amount of commercial prosperity, and that the circumstances of the people at large have not been so affected by want or poverty as to deter them from matrimony.

From Table V. it may be gathered that the relative frequency of marriages has, as in former years, been connected with the degree of aggregation of the population in the various Registration Districts. Thus, in the Principal Towns, the marriage-rate was 90 per ten thousand. This, we may remark, was a trifle below the rate observed in these densely-peopled districts in 1874. In the Large Towns, the rate was 89; in the Small Towns, 72; in the Midland-Rural Districts, 60; and in the Insular-Rural Group, 48, for every ten thousand inhabitants. The marriage-rates of 1875 have been considerably exceeded in all the Registration Groups, except the Principal Towns.

EIGHT PRINCIPAL TOWNS OF SCOTLAND.

The statements made in this and most of the succeeding paragraphs of this Report are founded upon the data furnished by the Eight Principal Towns of Scotland only. It fortunately happens that these towns are situated tolerably widely apart on the East and West Coasts of the country, so that such peculiarities of climate as are met with on either coast may be reasonably expected to exhibit their influence in some of our statistical returns. The occupations of the population in the various towns are very different. In some of them, as in Glasgow and Dundee, manufacturing industry prevails; in others, such as Aberdeen, Leith, and Greenock, many of the people lead a sea-faring life; in Edinburgh there is a comparative absence of commercial activity; while in Paisley and in Perth we find examples of populations probably not very dissimilar in habits and pursuits from the inhabitants of most of our smaller inland-towns. Each of the Principal Towns may be regarded as a social centre round which a certain

proportion of our whole population is more or less densely aggregated ; and it is scarcely conceivable that any cause can materially affect the well-being of the community in one of these centres without being likewise recognised in its effects upon the inhabitants of the surrounding country. Finally, at least 33 per cent. of the whole population of Scotland are inhabitants of these Eight Principal Towns, and constitute a sufficiently extensive basis for statistical analysis. It is to this fraction of the population only that reference is made in what follows of this Report. Some time must of course elapse before a complete and corrected account of the whole Births, Deaths, and Marriages that took place in Scotland during 1876 can be embodied in the form of a Detailed Annual Report.

BIRTHS IN THE EIGHT PRINCIPAL TOWNS.

44245 Births were during 1876 registered in the Eight Principal Towns of Scotland,—that is, there were 370 births for every ten thousand of estimated population. The highest birth-rate was observed in Greenock, and the lowest in Edinburgh. This was likewise the case in the years 1874 and 1875. For every ten thousand inhabitants of Edinburgh the rate was 327 ; while in Perth it was 329 ; in Aberdeen, 339 ; in Dundee, 376 ; in Glasgow, 385 ; in Paisley, 389 ; in Leith, 402 ; and in Greenock, 407.

Of the 44245 births in the Principal Towns, 3700, or 8·36 per cent. were illegitimate. The illegitimate births constituted 5·1 per cent. of the total births in Leith, 6·3 per cent. in Greenock, 6·8 per cent. in Paisley, 8 per cent. in Perth, 8·1 per cent. in Glasgow, 8·6 per cent. in Edinburgh, 10·4 per cent. in Dundee, and 11·2 per cent. in Aberdeen. In order that some idea may be conveyed as to the relative frequency of illegitimate births among the unmarried and widowed females, aged between 15 and 45, and residing in each of our Principal Towns, two new columns have been introduced into Table VIII. Those who have been accustomed

TABLE VIII.—Births, Deaths, and Marriages, and their Proportion to the Population, during the Year 1876, in each of the Principal Towns of Scotland ; estimated number of Unmarried Women and Widows between 15 and 45 years of age ; also the Illegitimate Births, and their Proportion to the Total Births, and to the number of possible mothers.

N.B.—The Tables referring to the Eight Towns are made up from the Monthly Returns, and we have not the means of correcting the discrepancies between them and the Quarterly Returns, as the Registration Books are not received at this office till many months after the close of the year.

to estimate the relative morality of our different towns, mainly by reference to the percentage of illegitimate births that occur in each, may perhaps find reason to correct or modify their views when they examine Table VIII. in its new form. The percentage of illegitimates furnished by possible mothers seems at least as fair a test of immorality as the percentage of illegitimates to total births.

Of the children born in the Eight Principal Towns, 22617 were males and 21628 females. These numbers are equivalent to nearly 104·6 male births to every 100 female births—a rate which does not particularly differ from that observed in the Principal Towns of late years.

DEATHS IN THE EIGHT TOWNS.

The Deaths registered in the Eight Towns during 1876 were 27971, or in the proportion of 234 to every ten thousand of estimated population. The mortality was consequently far below that of 1875, when the rate was 264, and still more decidedly below the mortality of the last ten years, which was 278·5 for every ten thousand estimated inhabitants of the Principal Towns.

The mortality in the various Towns did not vary so much as usual. For every ten thousand of estimated inhabitants, Edinburgh lost 204; Aberdeen, 211; Dundee, 221; Leith, 222; Greenock, 230; Perth, 241; Glasgow, 252; and Paisley, 264. The average death-rate of the previous ten years was slightly exceeded in the case of Perth alone. In every one

Leith	7,840	554	7·07	47·2
Perth	3,182	220	6·91	34·4

of the remaining Seven Principal Towns, the mortality was much lower than usual; and in Glasgow, Edinburgh, Dundee, Greenock, and Paisley, it was lower than in any one of the ten years embraced in Table IX.

In forming an idea of the comparative salubrity of our Principal Towns, the subject of infant mortality must be carefully considered. By the term 'infant mortality,' we here understand the rate of mortality of children during the first five years of life. In Table X. will be found a view of this mortality, obtained first by contrasting the numbers dying during the first quinquennial period of life with the estimated number of those alive at ages under five years, at the middle of 1877; secondly, by contrasting the number of deaths at ages under five years with the total number of deaths at all ages. The former is probably the more instructive mode of regarding the rate of infant mortality. From this point of view, then, it appears that infant mortality was, during 1876, least considerable in Aberdeen, and most severe in Glasgow. For every thousand alive at the middle of the year, there died in Aberdeen, 56·2; in Edinburgh, 58·7; in Perth, 69·1; in Leith, 70·7; in Greenock, 71·0; in Paisley, 73·2; in Dundee, 73·6; and in Glasgow, 84·3. Out of every hundred deaths at all ages, there occurred, at ages under five years, 34·4 deaths in Perth, 35·5 in Edinburgh, 36·8 in Aberdeen and in Paisley, 45·3 in Dundee, 45·6 in Glasgow, 46·0 in Greenock, and 47·2 in Leith.

The chief causes of deaths in each of the Eight Principal Towns are illustrated in Tables XI. and XII., and in drawing up these statements proper allowances has been made for a small number of deaths which have been registered without a distinctly specified cause assigned, or without such a cause as can be referred to any heading in our nosological scheme.

From Diseases of the Zymotic Class, under which are grouped all the Diseases generally spoken of as Contagious, Infectious, and Epidemic, the deaths were only 42 for every ten thousand of estimated population, and constituted 17·92 per cent. of the deaths from All Causes. In none of our former Reports has so low a mortality from Zymotic Disease been recorded. It may be said that in general the mortality from these diseases is not excessive in any of our Principal Towns when it does not amount to 50 per ten thousand inhabitants. In Paisley alone did the Zymotic mortality of 1876 nearly approach the above limit. In Edinburgh, it was only 33·4; in Aberdeen, 37·1; in Dundee, 38·8; in Perth, 44·4; in Glasgow, 45·3; in Leith, 45·6; in Greenock, 46·7; and in Paisley, 49·5 per ten thousand. The percentage of the total deaths in each town due to Zymotics was:—16·36 in Edinburgh, 17·55 in Dundee, 17·61 in Aberdeen, 17·96 in Glasgow, 18·42 in Perth, 18·72 in Paisley, 20·30 in Greenock, and 20·57 in Leith.

In Glasgow, 4·68 per cent. of the deaths were due to Hooping-cough, while all other epidemics were comparatively in abeyance.

In Edinburgh, the ruling epidemic was Scarlatina, which accounted for 3·29 per cent. of all deaths. From no other Zymotic disease did the deaths amount to 3 per cent.

In Dundee there was considerable mortality from Diarrhœa, to which cause 4·74 per cent. of the deaths were ascribed; 3·82 per cent. of deaths were attributed to Hooping-cough.

In Aberdeen, Diarrhœa caused 3·81 per cent. of deaths, while from Measles the percentage of deaths was 3·07.

In Greenock, 6·87 per cent. of the deaths were from Scarlatina, and 3·34 per cent. from the Group of Continued Fevers.

In Paisley, 5·3 per cent. of the deaths were from Hooping-cough, 3·75 per cent. from Fevers, and 3·51 per cent. from Diarrhœa.

In Leith, 4·28 per cent. of the deaths were due to Measles, 3·94 per cent. to Diarrhœa, and 3·6 per cent. to Scarlatina.

In Perth, Hooping-cough was the cause of 5·2 per cent. of all the deaths, while from Fevers very nearly 3 per cent. of deaths occurred.

If we inquire as to the amount of human life that has been lost by each of the more prevalent Zymotic diseases in the whole group of Eight Principal Towns, we find that the victims of Hooping-cough, 1015 in number,* have constituted 3·63 per cent. of the total deaths, and represent 8·5 deaths for each ten thousand of estimated population. Next in order of fatality, rank Diarrhœa with 887 deaths, constituting 3·17 per cent. of the total mortality; Scarlatina with 729 deaths, or 2·6 per cent. of all deaths; Fevers with 666 deaths, being 2·38 per cent. of the mortality; Measles with 645 deaths, being 2·31 per cent. of all that occurred; Croup and Diphtheria with 299 and 289 deaths respectively, scarcely in either case exceeding 1 per cent. of the gross mortality from All Causes.

TABLE XI.—Percentage of Deaths from different Diseases to the Population in each of the Eight Principal Towns of Scotland during the Year 1876, allowing for the causes not specified.

* Here and in all similar passages of this section of the present Report, the deaths registered under Specified Causes are increased by 6 per 1000, in order to make due allowance for the deaths from Unspecified Causes.

Enteric Fever caused nearly twice as many deaths as Typhus. In Aberdeen and in Perth, however, the deaths from Typhus were rather more numerous than those from Enteric Fever; while in Leith neither form of Fever could be said materially to predominate.

From Erysipelas there were 118 deaths; from Syphilis, 83; from Metria, 73; from Rheumatic Fever, 52; from Dysentery, 38; from Cholera, 26; from Pyæmia, 19; and from Smallpox, 15. Of the deaths from Smallpox, 10 were registered in Glasgow, 2 in Perth, and not a single death in Dundee, in Greenock, or in Leith.

From Diseases of Uncertain Seat, there were 888 deaths, and of these 504 were due to Cancer, and 236 to Dropsy. The former disease was most fatal in Edinburgh and in Aberdeen, least fatal in Glasgow and in Greenock. The number of deaths referred to 'Dropsy' is far smaller in 1876 than it was in 1875, and some previous years. This is satisfactory, for the true cause of death in cases of so-called 'Dropsies' should be referred to the Heart, Kidneys, Liver, &c.; and a death certificate in which Dropsy is stated to have been the disease of which a patient has died, is a mere confession of the informant's inability or disinclination to specify the true pathological cause of the death which he certifies. These deaths attributed to Dropsy were in 1876 more frequent in Paisley than elsewhere.

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the Year 1876, allowing for the causes of Death not specified.

DISEASES CAUSING DEATH.	Total Eight Towns.	Glasgow.	Edinburgh.	Dundee.	Aberdeen.	Greenock.	Paisley.	Leith.	Perth.

From Tubercular Diseases there were 5014 deaths, or 42 deaths for every ten thousand inhabitants of our Principal Towns. To this class of diseases then 17·93 per cent. of all the deaths in these Towns was due. Of course, Pulmonary Consumption contributed most materially to this mortality. To this cause alone 3530 deaths were ascribed, being 12·62 per cent. of all deaths that occurred, and equivalent to the removal of 29·6 from every ten thousand persons living in 1876. In these Reports it has been frequently pointed out that of all our Principal Towns, Leith appears to furnish fewest deaths from Consumption; and accordingly it may be seen, on inspection of Table XI., that while the death-rate from Phthisis has been only 19·4 per ten thousand in Leith, it has been decidedly higher in all the other Principal Towns, and has in Glasgow been 34·8. While in Leith the deaths by Consumption were 8·74 per cent. of the deaths from All Causes; the mortality from Phthisis in Glasgow was 13·78 per cent. of the gross mortality. The deaths from the remaining Tubercular Diseases were 736 from Hydrocephalus, 469 from Mesenteric Tabes, and 278 from Scrofula.

Diseases of the Brain and Nervous System caused 2680 deaths; *i.e.* 9·58 per cent. of all deaths. This gives a proportion of 22·4 deaths from Brain Diseases to every ten thousand of estimated population. The percentage of deaths from these causes was 11·47 in Aberdeen, 10·61 in Paisley, 10·46 in Edinburgh, 10·45 in Leith, 10·34 in Greenock, 10·23 in Dundee, 8·68 in Glasgow, and 8·35 in Perth. The rate at which each ten thousand inhabitants suffered from Brain Diseases was 27·6 in Paisley, 24·2 in Aberdeen, 23·8 in Greenock, 23·2 in Leith, 22·6 in Dundee, 21·9 in Glasgow, 21·3 in Edinburgh, and 20·1 in Perth.

To Diseases of the Heart and Circulatory System 1465 deaths, or 5·24 per cent. of Deaths from All Causes were attributed. It is somewhat remarkable to find these diseases especially rife in Perth, where they proved fatal to 22·8 out of ten thousand inhabitants, and constituted 9·45 per cent. of the deaths from All Causes. A similar observation was made in our Annual Report for 1875. Of the whole population of the Eight Principal Towns, 12·3 out of every ten thousand in 1876 succumbed to Disease of the Circulatory System.

Diseases of the Lungs, including those of the whole Respiratory System, but excluding Consumption, caused 5930 deaths, or 21·21 per cent. of the total deaths. The death-rate per ten thousand inhabitants was 49·7 in the population of the Eight Towns combined, 30·2 in Edinburgh, 35·7 in Aberdeen and in Greenock, 36·4 in Perth, 42·1 in Paisley, 45·4 in Leith, 49·8 in Dundee, and 59·4 in Glasgow. Out of the deaths from All Causes, there were due to Diseases of the Lungs, in Perth, 15·12 per cent.; in Greenock, 15·51; in Paisley, 15·91; in Aberdeen, 16·96; in Edinburgh, 19·68; in Leith, 20·48; in Dundee, 22·52; and in Glasgow, 23·54 per cent.

The deaths from Bronchitis alone were 4128; from Pneumonia, 1391; from Pleurisy, 95; from Asthma, 105; and from Pulmonary Disease (not better defined), 144.

Great as is the mortality indicated by these numbers, it may be regarded as far less considerable than that recorded for 1875, or indeed for the majority of recent years.

To Diseases of the Digestive System there were ascribed 1992 deaths, being 7·12 per cent. of the total deaths, or 16·7 to every ten thousand of estimated population. Diseases of this class seem again to have been more

frequent in Glasgow and in Paisley than in the other Principal Towns, and to have been least fatal in Dundee.

From Diseases of the Kidneys and Urinary System there occurred 411 deaths. The inhabitants of Aberdeen and of Edinburgh appear to have suffered more severely than those in other Towns from these complaints.

From Diseases of the Uterus (not including Metria) the deaths were 213; from Diseases of the Bones, Joints, &c., 191; from the Debility of Infancy, Premature Birth, &c., 1595; from Diseases of the Skin, 45; from Malformations, 87; from Atrophy, 186; from Sudden Causes (not better defined), 80; and from Violence, Privation, &c., 1071.

There were besides 1102 death ascribed to Old Age. This cause of death is more frequently assigned in Perth and in Paisley than elsewhere.

Of the Violent Deaths 43 were Suicidal. From the direct effects of Intemperance there died 82. If to this number there be added 17 deaths from Delirium Tremens (registered under Brain Disease), 99 persons may be said to have died from poisoning with alcohol.

Of the 81 persons who died during 1876 at ages exceeding 90 years, 17 were males and 64 females. One of the males, a pensioner who died in Edinburgh, was reported to be 108 years of age. Three females were registered as 99 years old at the period of their death.

MARRIAGES IN THE EIGHT TOWNS.

The number of Marriages registered during 1876 in the Eight Principal Towns of Scotland was 10735. The estimated population of these towns at the middle of 1876 was 1194357; consequently for every ten thousand inhabitants there have been scarcely 90 Marriages registered. This rate is below that observed in 1875, and more considerably below that deduced from the records of the last ten years. It has been of late remarked that the Marriage-rate is higher and better sustained in the Group of Large Towns than in the Principal Towns. Reference to Table VIII. shows that during 1876 the Marriage-rate was lowest in Greenock, and highest in Edinburgh and in Paisley. Out of ten thousand inhabitants there were married in Greenock, 76; in Aberdeen, 85; in Perth, 87; in Dundee, 88; in Glasgow and in Leith, 91; in Paisley and in Edinburgh, 95.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The effect upon the public health, produced by any considerable diminution of atmospheric temperature is universally recognised, and has in this series of Reports received abundant illustration. It may not, however, be wholly superfluous to draw attention to the teachings of the meteorological observations made during 1876, and more especially to the influence upon the mortality at various seasons which temperature seems to have exercised. The causes of death, which in this country have their intensity increased by any very considerable lowering of atmospheric temperature, are first: the Zymotic Diseases, and of these more especially Measles, Scarlatina, Diphtheria, Hooping-cough, and Croup; the more familiar forms of Continued Fever, viz., Typhus and Typhoid, Pulmonary Consumption, the whole class of Respiratory Diseases, especially Bronchitis, Pneumonia, and Pleurisy, Diseases of the Heart, Diseases of the Brain; and most of the causes of death which prove so fatal to children newly

born and are recorded under the headings of Infantile Debility, Premature Birth, &c. There can be little question that inclement weather lends energy to all these causes, and it is not too much to assert that they include more than one half of all the causes of death that constitute our nosological catalogue.

In Table XIII. there will be found in a very condensed form the more

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1876, compared with the mean of the Ten Years 1855–1864.

MONTHS.	YEAR 1876.				1855–1864.

salient facts respecting the Monthly Mortality and Mean Monthly in Scotland during 1876; and in the last two columns of the Table there are presented, for sake of comparison, similar details founded upon the observations of the ten years 1855-64, and which may be regarded as a sort of standard, any considerable deviation from which invites examination of the circumstances under which it occurs. From the Table it may be learned that February was the coldest month of 1876, but that its mean temperature was only half a degree below that of the decennial mean for February. Next in order of severity was March, during which the temperature was $2^{\circ}2$ degrees below the ten year standard. The warmest month of the year was July. January, October, November, and December were all decidedly warmer than usual, and in October, in particular, the mean temperature was no less than $2^{\circ}6$ degrees above that of October in the ten year standard.

In order to estimate the connection between temperature and mortality during the successive months, it is necessary to follow the statements made in Table XIV., and to bear in mind that December of 1875 had been an average month as regards temperature, and that the recorded deaths had been at the rate of 226 per diem, which is not excessive.

Regarding the meteorological peculiarities of 1876 we shall now quote freely from the Astronomer-Royal's notes appended to our Quarterly Reports.

In *January* the mean temperature was rather higher than usual; there was considerable humidity, and only moderate rainfall. The barometric column was high, beyond all former record, and remained remarkably steady at that unusual height. The deaths per diem were 221.

In *February* the weather was cold, the mean temperature being the lowest of the whole year; there was much humidity; a very large rainfall (never before equalled except in 1871 and 1866); an unusually low, but

TABLE XV.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Disease, in the Eight Principal Towns of Scotland, during each Month of the Year 1876.

1876.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.

steady, barometric pressure. The mortality was the heaviest experienced during any month of the year, being at the rate of 242 deaths per diem.

In *March* the whole country experienced an almost unexampled succession of storms; the mean temperature was the lowest since 1867; the depth of rain and snow only equalled in 1861; the force of the wind greater than since 1859, and its usual direction from the north-west. There is no record of so low an average barometric pressure during March in Scotland, and the variations of that pressure were greater than in any year since 1867. The mortality was not quite so heavy as in February, the deaths being at the rate of 239 per diem. It is remarkable that during these two last mentioned inclement months of 1876 the mortality should have been far lighter than that recorded during the corresponding months of 1875.

April was a very inclement month indeed. The mean temperature was low; the weather damp; the rainfall large; and the winds very strong and variable in direction. Yet the mortality of the month was unusually low, only amounting to 217 deaths per diem.

In *May* the mean temperature was rather low, but there were considerable variations of temperature—some hot days and many cold nights—very dry weather; little rainfall; a preponderance of strong north-easterly winds; a remarkably high barometric pressure. The daily average of deaths was 220, a mortality decidedly exceeding that of May 1875.

In *June* it was remarked that the variations of temperature from day to night were unusually great, and that the winds were very strong. In every other respect the month was, meteorologically considered, an average one. The mortality was low, being only 197 deaths per diem.

In *July* the average temperature was high; the weather fine, warm, sunshiny, and accompanied with more west wind than usual; the rainfall on the whole scanty, but more abundant about the western and northern stations. The mean height of the barometric column presented nothing

remarkable, but decreased notably with increase of latitude. In the northern islands there was considerable increase of the temporary barometric variations. The mortality amounted to only 180 deaths per diem.

In *August* the mean temperature was high, though hardly so considerable as in July. The weather was generally fine, warm, and bright. There was a full average rainfall, and the winds were occasionally rather violent. The mortality, 186 deaths per diem, was by no means high—indeed it was very decidedly lower than that of August 1875.

In *September* the mean temperature was lower than that observed during previous years, and this was more especially the case in the hill stations. The weather was dull—such an absence of sunshine having never been remarked except in 1872. The rainfall, upon the whole, did not exceed the average; but on the eastern coast, both north and south, more rain fell than on the western coast—a circumstance by no means usual. The prevalent winds were from the north-west; the barometric pressure was lower than usual. The mortality, 171 deaths per diem, was decidedly lower than in August.

October was characterized by a very high mean temperature—the highest ever chronicled in these returns. There was much cloud, little sunshine, considerable rainfall, and much strong east wind. The barometric pressure somewhat exceeded the mean, but varied considerably from time to time. Although the high mean temperature may be said to have been the only favourable meteorological peculiarity of the month, the deaths were remarkably few—in fact only amounting to 166 per diem, and constituting the minimum mortality for the year.

In *November* the mean temperature was, by about half a degree, above the average. There was much east wind, and an abundant rainfall, especially over the east midland and north-eastern districts of the country. Even in the south-eastern stations there was a more copious rainfall than in the south-western. The barometer was neither low nor unsteady. The daily deaths amounted to 194, being even less numerous than during the month of June.

'*December*,' says the Astronomer-Royal, 'was in several respects an

unexampled month in its averages, thus: never before, except in 1868, was the barometric pressure so low; never were there so many rainy days; never was there so great a depth of rain fallen; never was there so great a mean force of the wind; never was there so great a proportion of east wind; and never was there anything like so little sunshine.' The only favourable meteorological characteristic of the month seems to have been its high mean temperature. It is probably in consequence of this peculiarity that the mortality was during the month at the rate of only 198 deaths per day, a rate barely exceeding that which prevailed at mid-summer.

In how far the principal meteorological peculiarities of each month affected the intensity of certain diseases and classes of diseases can in some measure be ascertained by an examination of Table XV. It must, however, be carefully noted that this Table is constructed from the data furnished by the Eight Principal Towns only, and that some time must necessarily elapse before similar information regarding the Causes of Death in the other Groups of Registration Districts can be procured, corrected, and prepared for publication in a Detailed Annual Report for 1876.

It appears that in the Principal Towns, March and April, both inclement months, were characterized, as might have been expected, by the highest mortality; and that in September and October deaths were at a minimum. But perhaps the most remarkable fact brought out by Table XV., is that the exceedingly stormy wet weather in November, and more particularly in December, seemed no more trying to the health of the inhabitants of our Principal Towns than were the comparatively genial days of June. The only explanation that we can offer for this anomaly is that the amount of our winter mortality is ruled by the temperature that prevails more than by any other circumstance; and that rain, wind, absence of sunlight, and even prevalence of east wind are found to be comparatively innocuous in winter, if only the thermometer keeps tolerably steady at a point above its average reading.

TABLE XVIII.—Months equalized to 31 days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1876.

Turning to the recorded mortality from the more common causes of death, it is satisfactory to observe that the deaths from Small-pox were exceedingly rare, and that only two were registered between the 30th June and 31st of December. It is, however, perfectly well known that towards the end of 1876 deaths from Small-pox were by no means so rare in London and in other great towns of England, and it would be premature to flatter ourselves that the disease will not again, from time to time, make head among the population of Scotland, which is probably not better protected by its existing Vaccination Laws than that of England.

The deaths from Scarlatina were 112 in January, gradually declined to 28 in May, again rose to 67 in November, but were only 49 in December. Thus one of our most formidable town-pests did but little damage during 1876.

From Measles there was a considerable mortality in some of our Towns in March and April, when the virulence of the disease and fatality of its complications and sequelæ were no doubt promoted by the cold spring weather. During the last five months of the year, and especially during the exceptionally mild December, the deaths from Measles became comparatively trifling in number.

Hooping-cough, another disease in which inflammatory complications, such as Bronchitis and Pneumonia, constitute a great source of danger, prevailed rather extensively in January, was even more fatal in February, and continued to cause numerous deaths till June, when the advent of warm weather was no doubt efficacious in abating its intensity. During the last seven months of the year, and particularly in October, deaths from Hooping-cough were comparatively rare.

Deaths from Fevers, under which term Typhus and Typhoid are the principal included forms, were even less numerous than in 1875. In each of the months, February and May, 68 deaths were attributed to these causes, in December the deaths were 67, and in July only 36. Fever in an epidemic form can hardly be said to have prevailed during the year in any of our Principal Towns; and the influence of the weather on the fatality of the few sporadic cases that occurred cannot be distinctly made out by means of Table XV.

When excessive heat becomes in Scotland the means of raising the mortality, it is by increasing the fatality of such complaints as Diarrhœa that it principally operates. Hence it is only natural to find that during the hot months of July and August the deaths from Diarrhœa were far more numerous than at any other period of 1876. In March, which was a cold and inclement month, the mortality from Diarrhœa was at a minimum, comprising only 26 deaths; while in August the deaths were 210, and in December had sunk back to 42.

Consumption terminated by death in 390 cases in May, in 365 in April, in 221 in October, and in 220 in December. There can be no doubt that this very frequent cause of death gains intensity during cold, inclement weather; but its progress is so chronic, and its modes of fatal termination so various, that we cannot reasonably expect to find in our tables a very close connection between the record of an ungenial month and of a month unusually fatal to consumptive subjects. The mischief done to such patients by the inclemency of March or April may not lead to fatal consequences till summer is well advanced; and hence it is no new thing to find the deaths from Consumption in our Principal Towns more numerous in May than in any of the winter months.

Diseases of the Respiratory System are more evidently influenced by the weather than almost any other of the Causes of Death. The mortality from Diseases of the Lungs was not, however, nearly so heavy in 1876 as it was shown to be in 1875. Deaths were, indeed, rather numerous in January, and in March even amounted to 698, but after that they declined in frequency till September, when they only numbered 262. In December, however, they had again risen to 638.

In Tables XVII. and XVIII. the attempt is made to illustrate the lethal effect of disease, at the various seasons of the year, upon the persons included in each of four different classes defined by age. It must be held in mind that the data for these Tables are derived from the Principal Towns only, and that in alluding to their statements, we quote, for sake of convenience, exclusively from Table XVIII., in which the months are all equalized to a uniform length of thirty-one days, and in which the actual mortality of 1876 is consequently overstated by about a sixtieth part.

Children during the first five years of life died in largest numbers during the months of February and of March. January and May were likewise months of considerable mortality among children of these early ages. After May the deaths fell considerably. In June and July the influence of the deaths from Infantile Diarrhœa becomes manifest by an increase in the figures of the first column of Table XVIII.; but in September the number of deaths is at its minimum of 819, and in November and December, notwithstanding the approach of winter, the deaths are only 998 and 971. These numbers contrast very favourably with those recorded for 1875.

Adolescents, or those aged from 5 to 20, died in greatest proportion in April, which was a cold, ungenial month, and likewise in May. The minimum mortality of adolescents was attained in November and December, when it was only 192.

Adults, among whom are included all persons between 20 and 60 years of age, died in largest proportion in February, March, and January. The mortality among adults attained its minimum, 583, in October, and continued low during November and December.

Elderly persons, including all persons aged 60 and upwards, suffered most severely in March and in February. As in the case of adults, the mortality of the aged was at its minimum in October, and then continued low to the end of the year. In May, June, and August the mortality among the aged was heavier than during the corresponding months of the previous year, and the reason of this is not at present apparent. On the whole the mortality among the aged was, during 1876, the lowest that has been recorded since 1869, when Tables such as XVII. and XVIII. were first introduced into these Annual Reports.

TWELFTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1875.

IN the following Report we shall endeavour to present all needful details regarding the vaccination of children born in Scotland during 1875, and thus to indicate in how far the provisions of the Vaccination Act have been made available for the protection of our infant population. As in

TABLE XIX.—VACCINATIONS in SCOTLAND, 1865-1875, and proportion to the Births each year.

the course of former Reports, it will be our duty to call attention to any causes that may seem to interfere with the practice of vaccination, to any prejudice that may oppose the general application of Jenner's great discovery, and to any points in which the defects of the existing Vaccination Act seem to demand modification or additional legislation.

In Table XIX. an account is given of the number of Births registered in Scotland during each of the ten years 1865-74; of the number of successful vaccinations effected on these children; and of the number to whom, for various reasons, it was in each year found impracticable to afford the protection contemplated by the Act. Precisely similar data applicable to the Births of 1875 constitute the last line of the Table; and its second part contains in percentages the same information that its first part gives in absolute numbers.

During 1875 there were 123651 Births registered in Scotland, and of these children, 108096, or 87·42 per cent., were successfully vaccinated as the Act directs. The regular vaccinators found 252 children insusceptible from previous vaccination, which, in such circumstances must, although irregular, have been successful. The true number of successfully vaccinated must therefore have been 108348, and the true percentage on the births 87·624. In no less than 1211 instances, or 0·979 per cent. of all born, the performance of vaccination was, on medical authority, postponed. 190 children were pronounced insusceptible of vaccination from constitutional peculiarity, and 253 other cases of insusceptibility are recorded, in 252 of which the children had been irregularly but successfully vaccinated, while one had had Small-pox. 11326 children, or 9·16 per cent. of all born, died

TABLE XX.—VACCINATIONS in SCOTLAND, 1865-1875, deducting from the Births those who died before they could be Vaccinated, and giving the proportion of the Vaccinated to the surviving Births of each year.

under the age of six months, unvaccinated; and 2575, or 2·082 per cent., were removed from the districts in which they were born, or being otherwise abstracted from the observation of the Registrars, are presumed to be, for the most part, unvaccinated.

Table XX., constructed on the same plan as Table XIX., takes account of such only of the children born in each year as were presumed to be still alive after the termination of the first six months of life.

Out of 112325 children born in 1875 and alive at the age of six months, it appears that 108096, or 96·235 per cent., were successfully vaccinated as the Act directs; but, if account be taken of the 252 insusceptibles known to have been irregularly, but successfully, vaccinated, it seems that 108348 of those believed to be alive at the age of six months, or 96·459 per cent. of all such children, have received the protection which vaccination confers. In 1211 cases, or in 1·078 per cent. of all children alive at the age of six months, the performance of vaccination had been, on medical authority, postponed. The expediency of a postponement is, for the most part, determined by the presence of some appearance of ill health on the part of a child submitted for vaccination; and in the great majority of cases such ill health is connected with the approach of the period of teething, or with some of the skin eruptions which frequently occur during that period. There can be no doubt then that all such postponements might be saved as arise from too long refraining from applying to the vaccinator. Every month (after the third month of life) during which a child is permitted to remain unvaccinated, it probably runs increasing danger from possible exposure to the contagion of Small-pox, and until the process of dentition is completed, is less likely to be a fit subject for satisfactory vaccination, than if vaccinated at an earlier age. In 443 cases, or 0·394 per cent., a certificate of insusceptibility was granted; and in 252 of these cases, the insusceptibility was, as elsewhere explained, due to the fact that the children had been irregularly though successfully vaccinated before appearing before the regular vaccinator. In a single case a child, which had contracted Small-pox at a very early age, was

TABLE XXI.--Deaths from Small-pox in Scotland, 1855-1876.

* For 1873, 1874, 1875, and 1876, the Small-pox Deaths are estimated from the ascertained Small-pox Deaths in the Principal Towns, as compared with the Total Small-pox Deaths in all Scotland during the eighteen years, 1855-1872.

naturally enough thereafter found insusceptible of vaccination. But there remain 190 cases, or 0·169 per cent., of children believed to be alive at the age of six months, in which insusceptibility from some constitutional peculiarity was certified. It may be assumed that the insusceptibility thus certified is a mere record of the circumstances that, *from some cause or other*, two attempts to vaccinate in a given case had been abortive; and it is all but certain that the so-called 'insusceptibility' will not be a life-long condition in most of the cases in which it is recorded.

In 2575 cases, or 2·293 per cent., of all included in Table XX. as belonging to 1875, the Vaccination Act was frustrated by the children having been removed from the district where they were born, or by their having been otherwise abstracted from the notice of the Registrars when the period arrived for enforcing vaccination under penalty. To the diminution of this rather formidable list of failure, it is natural to believe that nothing would more powerfully contribute than a curtailment of the period during which, under the existing Vaccination Act, parents and guardians are not obliged to have their children vaccinated. The consequence of the unnecessary delay at present permissive is, that tramps and vagrants (a class not at all likely to give themselves unnecessary trouble in sanitary matters) are permitted to flit about from place to place with their children, vaccinated or unvaccinated, as soon as the mothers can travel after recovery from their confinements. It would be a great matter to be able to enforce the provisions of the Act at an earlier period than six months, were it merely for the sake of the poor children of these nomads; but it should likewise be remembered that this class constitutes a fruitful source of danger during an epidemic of Small-pox to the whole community. We repeat then our opinion, already often expressed in these Reports, that vaccination should, in Scotland, be made compulsory before the termination of the fourth month of infant life.

Grouping together the numbers of children presumed to be unvaccinated because not accounted for to the Registrars, and likewise the cases of so-called Constitutional Insusceptibility, we find 2765 cases in which, after children, born in 1875, arrived at six months of age, there was good reason to believe that they were not protected against Small-pox. In other words, we may estimate the failure of the existing Vaccination Act at 2·462 per cent. out of all alive at the age of six months.

In Table XXI. we give the numbers of deaths from Small-pox

TABLE XXII.—SMALL-POX DEATHS in the Eight Principal Towns of Scotland at different Ages in 1876, also during the Ten Years, 1865–1874, compared with those of the Ten Years, 1855–1864, in the same Towns before the Vaccination Act came into operation.

recorded in all Scotland from the year 1855 to 1876 inclusive; but it must be noted that the numbers for the last four years are *estimated* from the ascertained numbers of Small-pox deaths in the Principal Towns, as compared with the Total Small-pox deaths in all Scotland during the eighteen years 1855–1872 inclusive. There is no reason to doubt that these *estimated* numbers approximate closely to the truth; and it is satisfactory to note that the deaths during 1876 have been very few indeed—fewer in fact than the deaths of any year included in the Table with the exception of 1868.

In accordance with custom, an account of the deaths from Small-pox in the Principal Towns, at different ages, during the year 1876, and at two other periods, is given in Table XXII.; but the numbers in the first column, which refer to 1876, are so trifling that it seems unnecessary to offer any commentary upon them.

At page 76 we once more insert the Table, first introduced in our Annual Report for 1874, which gives a sufficiently comprehensive view of the working of the vaccination in Scotland during the ten years terminating with 1873. The statements of the Table are likewise applicable to each of the Divisions and Counties of Scotland.

I have the honour to be,

SIR,

Your most obedient Servant,

WILLIAM ROBERTSON, M.D.

STATISTICAL DEPARTMENT,
19th March 1877.

XI.—ABSTRACT of the METEOROLOGY of the Eight Principal Towns of Scotland during the several Months of the Year 1876.

Mean Height above the Sea-level, 111 feet. Mean North Latitude, 56° 12'. Mean West Longitude, 3° 30'.

1876.	BAROMETER.		SELF-REGISTERING THERMOMETER.						HYGROMETER.		DEDUCTIONS from Glaisher's Tables, 2d Edit.				RAIN.		WINDS.									Pressure on square foot.
	Monthly Range.	Mean at 32° and Sea-level.	Highest in Month.	Lowest in Month.	Mean Temperature.	Monthly Range.	Mean Daily Range.	Greatest Daily Range.	Dry Bulb, or Mean Temp. of Air.	Wet Bulb, or Temp. of Evaporation.	Dew-point Temperature.	Elastic Force of Vapour.	Wt. of Vapour in Cubic Foot of Air.	Humidity. Sat. 100.	Number of Days it fell.	Amount.	Number of Days it blew in certain Directions.

APPENDIX.

VACCINATIONS, 1875.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

1. SHETLAND.

1. (2.) BURRA AND QUARFF.—In the case referred to in col. 7, vaccination was successfully effected several months ago, but the certificate has not yet been granted.

3. (3.) FAIR ISLE.—Mr. Lawrence, the school-master, has vaccinated the children, but cannot grant a certificate, thus, while the spirit of the law is being carried out, the letter is not.

4. (2.) NORTH YELL.—At present there are too many defaulters, and there will always be a few so long as it remains undecided between the Parochial Board and the parents who should provide a Vaccinator.

2. ORKNEY.

24. ROUSAY.—Of the 36 Births registered, five were insusceptible of vaccine disease. The Registrar is unable to account for so many, never till this year having had an entry of the kind to make.

26. SANDAY.—With very few exceptions parents and guardians perform their statutory duties with regularity and attention, but too frequently the children are over six months before the operation is performed and certified, owing to the difficulty experienced in getting the Vaccinator to perform the work in time. This could be obviated only by more exacting statutory obligations relative to periodical visits and responsibility on the part of the Vaccinator.

3. CAITHNESS.

41. THURSO.—The Registrar considers the number of postponed cases larger than necessary.

II. NORTH-WESTERN DIVISION.

5. ROSS AND CROMARTY.

Mainland.

58. (2.) SHIELDAIG.—Vaccination still greatly behind, and there is no reason why it should be so, seeing the Vaccinator visits the different sections of the district once a month. The Registrar is of opinion, that if only four months were allowed, instead of twelve as at present, and a few of the most notorious defaulters prosecuted, the Act would work more smoothly.

61. CROMARTY.—In consequence of the death of the medical practitioner, certificates of successful vaccination of three children have not been received, although the operation was performed. Steps, however, have been taken to obtain the certificates.

73. KNOCKBAIN.—Since the Act came into operation only one entry remains unaccounted for, being that of the child of a hawker in the Register book of 1868.

83. TARBAT.—The returns do not come in very regularly, as there is no resident medical practitioner.

85. URRAY.—The two cases of postponed vaccination were caused by an outbreak of Scarlatina.

Insular.

86a. BARVAS.—On 30th September last the Registrar made out a list of vaccination defaulters, including defaulters for half-year ending 30th September (88 in all), and forwarded the same to the Inspector of Poor to be laid before the Board. Between successful vaccinations, postponements, deaths, and removals, the above number is now reduced to about 32.

6. INVERNESS.

Mainland.

92. (1.) BOLESKINE.—Parents are willing to have their children vaccinated, but many complain of the doctor's fee of 2s. 6d., and the great inconvenience of having to travel long distances to the place of meeting.

97. (1.) GLENELG.—The Registrar finds it necessary in some cases to send a second notice, but he has not, for some time, been under the necessity of making up a list of defaulters for the Parochial Board.

102. KINGUSSIE.—The prevalence of Measles and colds prevents vaccination being so well attended to as otherwise it would be.

Insular.

108. BARRA.—Three children residing in the Barrahead Islands are unvaccinated, it being impossible for the Vaccinator to attend on account of bad weather.

114. (2.) RAASAY.—Vaccination not yet properly attended to. A number of children have been vaccinated, however; but the Vaccinator has not had an opportunity of ascertaining whether the operation had been successful.

III. NORTH-EASTERN DIVISION.

7. NAIRN.

121. AULDEARN.—Vaccination of the child entered in col. 2 has been postponed eight times.

123. NAIRN.—The two unaccounted for are children of hawkers who have no domicile.

8. ELGIN (OR MORAY).

137. FORRES.—The case reported in col. 7 is that of an illegitimate child whose mother left the district with her child to reside in her parish of domicile (Lochalsh). On three different occasions certificates of postponement of vaccination have been received, and the Inspector of Poor of Lochalsh has now reported that the child has been successfully vaccinated, but that the Vaccinator will not grant the certificate because he has not been paid the fee. The Registrar, therefore, presumes that the vaccination should not be recorded until the certificate has been received.

10. ABERDEEN.

186. CULSAMOND.—Act works pretty well with close attention, the remuneration for which is inadequate.

201. GLENMUICK.—Vaccination on the whole well attended to. The Vaccinator is generally furnished with a list of Births when the quarterly returns are made up, by which means he is enabled to have the operation performed, which parents might sometimes defer till expiry of the statutory period.

11. KINCARDINE.

259. FORDOUN.—The child removed from the district is that of a travelling showman, whose wife was delivered of a child on the half-yearly market-day at Whitsunday, and the Registrar has not seen or heard of him since.

IV. EAST-MIDLAND DIVISION.

12. FORFAR.

282. (3.) ST. CLEMENT (DUNDEE).—Any trouble in working the Act arises from the long period between birth and vaccination.

282. (4.) ST. ANDREW (DUNDEE).—A very large proportion of parents still delay having their children vaccinated until they get the statutory notice, the excuse made by many being that the medical men advise them to do so. That 'doctors differ,' in practice at least if not in theory, is proved by the fact that some of them perform the operation when the children are three or four months old, while others invariably put off, even against the desire of the parents, till the statutory period is nearly or altogether expired. With this last class are almost all the postponed cases, of which there are far too many—some of them running for two years. The result, as will be seen from the return, is, however, very satisfactory. Out of 1708 children, only nine are unaccounted for. To bring about such a result the Registrar has had immense labour and trouble. In many cases notices had to be repeated before the certificates came in. Were the ten days' grace abolished, the cause of delay above referred to, and the trouble and annoyance on the part of the Registrar would be partly removed. Referring to the last return it will be observed that this district stands alone as regards the number of children 'insusceptible of vaccine disease on the ground of previous vaccination.' There

are more of such cases than in all the districts of Glasgow or Edinburgh put together. The explanation of this is that some druggists and midwives in the district make 'experiments' in vaccination, and get a medical man to sign certificates for them. This irregular way of working should be put a stop to, as it is feared many of the children thus operated upon are not properly vaccinated at all.

288. FORFAR.—About one half of the certificates had to be called in by the usual notice to parents. The children, for the most part, were vaccinated in the third or fourth month, but parents neglected to return the certificates to the Registrar.

13. PERTH.

342. CRIEFF.—At times considerable difficulty is experienced in obtaining the return of the certificates.

374. LOGIE.—Of the children born during 1875, 12 per cent. died before vaccination.

14. FIFE.

442. KIRKCALDY.—Act working very well, though there is still a good deal of trouble connected with the return of the certificates.

V. WEST-MIDLAND DIVISION.

17. STIRLING.

490. STIRLING.—No cases of refusal occurred, although some parents attributed illness and even death to the consequences of vaccination; these, however, have not been corroborated by any evidence.

18. DUMBARTON.

495. CUMBERNAULD.—Less attention is now paid to vaccination, and in consequence the Registrar is put to a good deal of additional trouble and expense.

501. OLD OR WEST KILPATRICK.—The population of the east part of the parish being fluctuating, the certificates in many cases cannot be obtained.

19. ARGYLL.

Mainland.

510. DUNOON AND KILMUN.—Act pretty carefully attended to. A considerable number of notices, however, require to be sent to parents every six months, in order to get in certificates within the statutory period.

526. LOCHGILPHEAD.—The only jarring element in the operation of the Act lies in the dilatoriness of poor parents in forwarding the certificates. The Registrar is satisfied all the children are vaccinated by the medical attendants. These, however, will not give a certificate without payment of the fee. The statutory notices are generally attended to, but several become defiant, and say, 'My child is vaccinated; take me to court, and I'll summon the doctor to prove it.' The Registrar has not as yet proceeded to extremes, but it is becoming apparent that something must be done to rectify the abuse.

Insular.

540. KILCHOMAN.—All the children were successfully vaccinated, except two who died before.

551. (1.) TYREE.—Although the greater number of the certificates are not sent in till after the prescribed time, yet all the surviving children were successfully vaccinated.

VI. SOUTH-WESTERN DIVISION.

21. RENFREW.

571. MEARNS. — Parents and guardians are annually getting more careless in returning the schedules, notice having to be sent in almost every case, and in many this trouble on the part of the Registrar has to be repeated several times — for which he receives no remuneration.

22. AYR.

590. (2.) TROON. — If the period for vaccination were limited to three months, the Registrar would experience less difficulty.

23. LANARK.

660. WISTON AND ROBERTON. — Considerable difficulty is experienced in procuring certificates of vaccination within the time prescribed by the Act.

VII. SOUTH-EASTERN DIVISION.

24. LINLITHGOW.

673. (1.) WHITBURN. — It is not without trouble to the Registrar that vaccination is performed within the prescribed time, and with very few exceptions certificates are not returned until the Registrar's notice has been issued. Parents blame the Vaccinator.

25. EDINBURGH.

676. COCKPEN. — A number of parents when too late in returning the certificate try to throw the blame upon the doctor.

681. CRICHTON. — Work in connection with the Vaccination Act is no less than formerly. The Registrar could, however, wish that a simpler

method were adopted for prosecuting careless parents.

27. BERWICK.

746. LADYKIRK. — Parents very willing to carry out the requirements of the Act, but sometimes have great difficulty in procuring the certificates from the medical officer.

VIII. SOUTHERN DIVISION.

31. DUMFRIES.

816. CLOSEBURN. — Vaccination scarcely so well attended to as formerly. The parents blame the doctors, and the doctors the want of punctuality on the part of the parents.

839. LANGHOLM. — A medical practitioner was brought before a Sheriff and Jury Court at Dumfries, charged with uttering a number of false certificates, and in consequence application had to be made to the Sheriff to have the Register books of Births for years 1871, 1872, 1873, and 1874 corrected with reference to said certificates.

32. KIRKCUDBRIGHT.

862. CORSOCKBRIDGE. — Great trouble and expense still experienced by parents going twice, and sometimes three times (10 and even 14 miles), for the purpose of vaccination. The Act should not be so stringent in compelling the Vaccinator to see the child before granting a certificate, as any person who has brought up a family can tell if the operation is successful.

33. WIGTOWN.

893. NEW LUCE. — It would be advisable to restrict the period to three months.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
596	Carnoch	Parts of Contin, Fodderty, and Urray.
716	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
866	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir, (2) Rest of Kilmuir and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbryde.
147	Banff	Banff, and part of Gamrie.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrinnes	Part of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
217	Logie-Coldstone & Cromar	Logie-Coldstone, and part of Glenmuick, etc.
222b	Millbren	Parts of Fyvie and Monquhitter.
227a	New Machar	New Machar, and part of Udney.
227b	New Pitligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
237b	Savoeh	Parts of Ellon, New Deer, Old Deer, and Tarves.
240	Strathdon	Strathdon, and part of Tarland.
249b	Ythan Wells	Parts of Auchterless and Fergie.
272	Arbroath	Arbroath, and part of St Vigens.
282	Dundee	Dundee, and part of Liff, Benzie, and Invergowrie.
312	Montrose	Montrose, and part of Dun.
324	Aberfeldy	Parts of Dull, Fortingall, Kenmore, Logierait, and Weem.
328b	Ardoch	Parts of Blackford, Dunblane, and Muthill.
331	Balquhider	Balquhider, and part of Comrie.
333	Blackford	Blackford, and part of Ardoch.
344	Dowally	Part of Dunkeld and Dowally.
343	Dunblane	Dunblane, and part of Ardoch.
349	Dunkeld	Parts of Caputh and of Dunkeld and Dowally.
355a	Fortingall	Parts of Fortingall and Weem.
355b	Foss	Part of Dull.
360	Kenmore	Parts of Kenmore and Weem.
361	Killin	Parts of Kenmore, Killin, and Weem.
367	Kinloch-Rannoch	Parts of Fortingall and Logierait.
375	Logiealmond	Parts of Fowls-Wester, Little Dunkeld, Methven, Monzie, and Redgorton.
379	Meigle	Meigle, and part of Coupar-Angus.
386a	Muthill	Muthill, and part of Ardoch. [Kinloch, and Rattray.
386b	Persie	Parts of Alyth, Bendoehy, Blairgowrie, Caputh, Kirkmichael, Lethendy and
387	Perth	Perth, and parts of Kinnoull, Scone, and Tibbermore.
394b	Strathfillan	Part of Killin.
394c	Tenandry	Parts of Blair-Athol, Dull, and Moulin.
423	Dunbog	Dunbog, and parts of Abdie and Flisk.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall and part of Kinghorn.
481b	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
490	Stirling	Stirling, and small part of St Ninians.
493	Bonhill	Bonhill, and part of Dumbarton.
496	Dumbarton	Parts of Cardross and Dumbarton.
506	Ballachulish, etc.	Part of Kilmalie.
509	Cumlodden	Parts of Glassary and Inveraray.
512	Glenorchy	Glenorchy, and part of Inishail.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan	(1) Parts of Kilchrenan, etc., and Inishail.
526	Lochgilthead	Parts of Glassary and South Knapdale.
529	Muckairn	Muckairn, and part of Inishail. [Knapdale.
535	Tarbert	Parts of Kilcalmonell and Kilberry, of Saddell and Skipness, and of South
536	Bowmore (or Killarrow)	Part of Killarrow and Kilmeny.
542	Kilfinichen and Kilvickeon	Parts of Kilfinichen and Kilvickeon, and of Torosay.
543	Kilmeny	Part of Killarrow and Kilmeny.
545	Kinlochspelve	Part of Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and of Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
556	Lochranza	Parts of Kilbride and of Kilmore.
557	North Bute	North Bute, and part of Rothesay.
559	Abbey	(1) Parts of Abbey and Renfrew, (2 and 3) Rest of Abbey.
573	Paisley	High, Middle, and Low Church Parishes.
578	Ayr	Ayr, and parts of Newton-upon-Ayr, and of St Quivox.
595	Irvine	Irvine, and part of Dundonald.
612	St Quivox, etc.	Parts of Newton-upon-Ayr, and St Quivox.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	City of Glasgow, including Gorbals and parts of Barony and Govan.
670	Queensferry	Queensferry, and part of Dalmeny.
684	Portobello	Parts of Duddingston and South Leith.
685	Edinburgh	City of Edinburgh, including Canongate and parts of St Cuthberts, Duddingston, Liberton, and South Leith.
690	Kirknewton & East Calder	Kirknewton and East Calder, and part of Kirkliston.
692	Leith	(1) Parts of Cramond, North Leith, and St Cuthberts; (2) Parts of North Leith, St Cuthberts, and South Leith.
698b	Stobhill	Parts of Borthwick, Cockpen, Newbattle, and Temple.
774a	Caddonfoot	Parts of Galashiels, Selkirk, Yarrow, Innerleithen, and Stow.
787b	Edgerston	Parts of Jedburgh, Oxnam, and Southdean.
813b	Brydekirk	Parts of Annan, Cummertrees, and Hoddam.
853b	Wanlockhead	Part of Sanquhar.
857b	Bargrennan	Parts of Minnigaff (Kirkcudbright), and of Penninghame (Wigtown).
862	Corsockbridge	Parts of Balmaclellan, Kirkpatrick-Durham, and Parton.
864	Dalbeattie	Part of Urr.
899	Stranraer	Stranraer, and parts of Inch and Leswalt.

LIST of REGISTRATION DISTRICTS which include BURGHS, or TOWNS of 2000 Inhabitants and upwards, or parts thereof, bearing a different name from the Districts in which they are situated.

No.	Registration Districts.	Burghs.	Towns.

* The actual number of Districts is 1029—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place *compound* names in the order in which they are pronounced.

REPORT.

TO THE

RIGHT HON^{BLE}. R. ASSHETON CROSS, M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 18th April 1878.

SIR,

In accordance with the requirements of the Scottish Registration Act (17 & 18 Vict. cap. 80), I have now the honour to submit to you a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1877, which has been prepared in the usual form, with a view to its being laid before Parliament.

I have also the honour to submit, in accordance with Section 19 of the Vaccination Act (26 & 27 Vict. cap. 108), the Thirteenth Annual Report on Vaccination, embracing the usual details relative to the vaccination of children whose Births were registered in Scotland during the year 1876. This Report likewise contains three appended tables illustrating the mortality from

Smallpox among children during each of the first five years of life, as recorded in Scotland during each of the ten years preceding the passing of the Scottish Vaccination Act, and likewise during each of the ten years that have elapsed since the passing of that measure, and for which detailed statistics have been furnished to this Department.

I have the honour to be,

SIR,

Your most obedient Servant,

W. PITT DUNDAS,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY WILLIAM ROBERTSON, M.D. F.R.S.E.

SIR,

THE Report which I have the honour to submit is designed to include all the usual details regarding the Births, Deaths, and Marriages registered during the year 1877 in the 1032 Registration Districts of Scotland. Appended to the general Annual Report will be found the Thirteenth Report on Vaccination, in which is contained all available information regarding the operation of the Scottish Vaccination Act, and more especially as regards its application to the vaccination of children born in Scotland during 1876.

The population of all Scotland, estimated to the middle of 1877, was 3,560,715. In framing this estimate it is assumed that the annual rates of increase of males and females observed between the census determinations of 1861 and 1871 have, since the latter period, undergone no alteration. During 1877 there were registered 126824 Births, 73946 Deaths, and 25790 Marriages. These figures, when contrasted with similar data for recent years, given in Tables I. and II., show that the

TABLE I.—Population estimated to the middle of each year, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1877, and their Proportion to the Population; also the Excess of Births over Deaths, the Number of Illegitimate Births, and their Proportion to the Total Births.

birth-rate of 1877 has been considerably above the average rate of the last ten years, and that it has only twice been surpassed since the Registration Act came into operation; that so low a death-rate has not been recorded since 1861; and that the marriage-rate has not particularly differed from the average rate of the last ten years.

BIRTHS.

126824 Births were registered in Scotland during 1877, being at the rate of 3·56 per cent., or of 356 for every ten thousand of estimated population. The number and proportion of births in each of the Five New Registration Groups of Districts are exhibited in Tables IV. and V. 44538 births took place in the Eight Principal Towns, 15893 in the Large Towns, 29565 in the Small Towns, 33571 in the Mainland-Rural, and 3257 in the Insular Rural Districts. As usual, it is found that the birth-rate of the Large Towns has exceeded that of all the other Registration Groups, having in fact amounted to 4·45 per cent. In the Small Towns the rate was 3·67, and in the Principal Towns 3·66 per cent.; in the Mainland-Rural Districts 3·19, and in the Insular-Rural Group only 2·52 per cent.

Of the registered births, 10591, or 8·35 per cent., were illegitimate. In the Insular Rural Districts the percentage of illegitimate births was 6·39; in the Large Towns, 6·44; in the Small Towns, 7·64; in the Eight Principal Towns, 8·16; and in the Mainland-Rural Districts, 10·33 per cent. It appears that not only in Scotland viewed as a whole, but in each of its Five Groups of Registration Districts, the rate of illegitimacy during 1877 was considerably below that of 1876. The rate for Scotland in general is the lowest recorded since 1855.

In Table VI. is presented the usual account of the relative proportions of illegitimacy in the geographical divisions and separate counties of Scotland. As regards the divisions it is sufficient to state that the frequency of illegitimate births was in every one of them less in 1877 than in 1876. The Southern and North-Eastern Divisions contribute most largely to the account of bastardy, while in the North-Western and West-Midland Divisions the proportion of bastards is far less formidable.

In the counties of Ross and Cromarty the illegitimate constituted only 4·7 per cent. of the total births. In Dumbarton the rate was 5·7, and in the county of Stirling it was just 6 per cent. In twenty-three counties the illegitimate births constituted between 6 and 11 per cent.

TABLE III.—Births, Deaths, and Marriages in each of the Eight Divisions of Scotland during the Year 1877, and their Proportion to the Estimated Population.

DIVISIONS.	POPULATION.		BIRTHS.		DEATHS.		MARRIAGES.

Of the 126824 live births registered in 1877, 65118 were males and 61706 females. For every 100 girls there were consequently 105·5 boys born. The relative proportion of male births was, as has generally of late years been the case, most considerable among the inhabitants of the Insular Rural Districts. This circumstance is of interest when regarded in connection with the preponderance of females in our island population at the period of the last Census.

Births were most numerous in the month of June, when 368·8 per diem were registered; least numerous in December, when the daily number was 327·9.

DEATHS.

The number of Deaths recorded in 1877 was 73946, being very nearly in the proportion of 208 for every ten thousand of estimated population. This death-rate is unusually low; lower than that recorded even in 1876; and, in fact, the lowest death-rate recorded in Scotland since 1861. Until the materials for framing the Detailed Annual Report for 1877 become available, it cannot be with absolute certainty determined to what circumstances Scotland is mainly indebted for the low death-rate of 1877; but it is very plain that the remarkable immunity from Zymotic Diseases which has been observed in the Principal Towns, and which the Tables of the present Report will be found to illustrate, must have materially tended to diminish the figures representing the mortality of Scotland in general. Anything that seriously affects the well-being of the population of our Principal Towns seldom fails to affect the condition of Scotland at large.

The average number of deaths was greatest in March, when it amounted to 246·7 per diem; but in September the deaths were only 162 per diem.

TABLE VII.—Births, Deaths, and Marriages, and their Proportion to the Population, in the Eight Principal Towns of Scotland, during each of the Years 1855–1877.

YEARS.	Population estimated to the middle of each year.	BIRTHS.		DEATHS.		MARRIAGES.	
		Number.	Per cent. to Population.	Number.	Per cent. to Population.	Number.	Per cent. to Population.
1855	827,558	28,113	3·39	22,706	2·74	6,937	0·84
1856	837,540	31,719	3·78	22,254	2·65	7,507	0·89

1866	976,986	38,541	3·94	27,466	2·81	9,458	0·96
1867	995,583	39,012	3·96	26,519	2·69	8,870	0·90
1868	1,014,536	39,492	3·89	28,037	2·76	8,589	0·86
1869	1,033,853	39,517	3·82	31,477	3·04	9,156	0·88
1870	1,053,542	40,452	3·83	28,508	2·70	9,733	0·92
1871	1,073,608	40,442	3·77	31,426	2·93	9,819	0·91
1872	1,094,061	41,673	3·81	30,199	2·76	10,427	0·95
1873	1,114,907	41,500	3·73	30,008	2·69	10,594	0·95
1874	1,136,154	42,631	3·75	32,124	2·83	10,574	0·93
1875	1,171,228	43,633	3·72	30,958	2·64	10,665	0·91
1876	1,194,357	44,245	3·70	27,971	2·34	10,735	0·90
1877	1,217,943	44,538	3·66	28,220	2·32	10,713	0·88

The numbers for 1875, 1876, and 1877 are made up from the Quarterly Returns; the remainder from the Detailed Annual Reports, where the figures are corrected.

In the Large Towns, where the death-rate was highest, it did not exceed 254 per ten thousand of estimated population; in the Principal Towns, the rate was 231, in the Small Towns 200, in the Mainland-Rural Districts 175, and in the Insular Rural Districts 165, for every ten thousand inhabitants. In all the Town Districts the mortality is thus seen to have been low beyond recent precedent; but in the Rural Districts, both Mainland and Insular, the experience of 1876 was fully more favourable.

MARRIAGES.

25790 Marriages were registered in Scotland during the year 1877, being at the rate of little more than 72 for every ten thousand of population. This rate, although decidedly lower than that recorded during each of the five years immediately preceding, does not differ from the average rate of the last ten years. Our countrymen are, upon the whole, a calculating and provident race; and it is only natural to account for the diminished frequency of marriages in 1877 by referring to the recent dulness of trade, and to the tendency to reduction of wages among miners and others.

In the Principal Towns the marriage-rate, as may be seen on reference to Table V., was 88 for every ten thousand inhabitants; in the Large Towns, 82; in the Small Towns, 68; in the Mainland-Rural Districts, 59; and only 41 in the Insular Rural Group. These rates are lower than those recorded for 1876 in all the Districts except the Mainland-Rural, in which the rate of 1877 is somewhat higher. It will be observed that the frequency of marriage seems as usual to be influenced by the degree of aggregation of the population in the various Groups of Districts.

EIGHT PRINCIPAL TOWNS OF SCOTLAND.

The statements which are about to be given in the remaining sections of this Report refer, almost exclusively, to data furnished by the Eight Principal Towns of Scotland. It is no doubt to be regretted that similar data cannot be furnished with like promptitude from all parts of Scotland, but the resources at the command of our statistical department are not such as to admit of more speedy publication of the Detailed Annual Reports applicable to the whole of Scotland. When, however, it is considered that the Monthly Reports issued by the Registrar-General since the beginning of 1878, contain an abstract of the Births, Deaths, and Marriages in a large number of selected districts throughout the country, and an account of the numbers that have perished from each of the more common causes of death, it will probably be admitted that every possible effort is made to give early publication to such returns as are of importance in regard to the public health, and may be useful in directing the operations of sanitary authorities.

BIRTHS IN THE EIGHT PRINCIPAL TOWNS.

44538 Births were during 1877 registered in the Eight Principal Towns of Scotland. There were 366 births for every ten thousand of estimated population. The highest birth-rate was in Leith, and the lowest in Perth. For every ten thousand inhabitants the birth-rate was 320 in Perth, 332 in Edinburgh, 345 in Aberdeen, 363 in Greenock, 373 in Paisley, 375 in Dundee and 379 in Glasgow.

Of the 44538 Births in the Principal Towns, 3634, or 8·16 per cent., were illegitimate. The illegitimate constituted 5·2 per cent. of the total births in Leith, 5·3 per cent. in Greenock, 7·5 per cent. in Paisley, 7·9 per cent. in Edinburgh, 8·1 per cent. in Glasgow, 10 per cent. in Perth, 10·2 per cent. in Dundee, and 10·5 per cent. in Aberdeen. If, however, the relative frequency of illegitimate births among possible mothers be considered, the Principal Towns will rank in the following order:—Edinburgh, with 1·53 per cent. of illegitimacy; Greenock, with 1·80 per cent.; Leith, with 1·83 per cent.; Paisley, with 1·80 per cent.; Dundee, with 2·20 per cent.; Perth, with 2·22 per cent.; Glasgow, with 2·27 per cent.; and Aberdeen, with 2·45 per cent. Both of the above modes of statement will be found fully illustrated in Table VIII.

Of the 44538 children born in the Eight Principal Towns, 22880 were males and 21658 females. The number of boys was consequently fully 105·6 for every 100 girls,—a proportion exceeding that observed during 1876, but closely according with relative numbers of male and female births in all Scotland.

DENSITY OF THE POPULATION IN TOWN DISTRICTS.

If there existed accurate data for ascertaining the density of the

TABLE VIII.—Births, Deaths, and Marriages, and their Proportion to the Population, during the Year 1877, in each of the Principal Towns of Scotland; Estimated Number of Unmarried Women and Widows between 15 and 45 years of age; also the Illegitimate Births, and their Proportion to the Total Births, and to the Number of possible Mothers.

N.B.—The Tables referring to the Eight Towns are made up from the Monthly Returns, and we have not the means of correcting the discrepancies between them and the Quarterly Returns, as the Registration Books are not received at this office till many months after the close of the year.

population in each of the Registration Districts of our Principal Towns, there is reason to believe that some interesting results might be obtained by contrasting, in various cases, the average annual mortality with the degree in which human beings are aggregated. At the period of the Census of 1871 a sufficiently accurate enumeration of the inhabitants of each Registration District was obtained; and all that is wanting to enable us to compute the density of the population in any given district is a knowledge of its area. Having, through the kindness of the municipal authorities of the Eight Principal Towns, been favoured with Ordnance maps on the 6-inch scale, on which the boundaries of the various districts of each town are marked in with a coloured line, we have undertaken the calculation of the areas by means of Amsler's planimeter, an instrument which is admirably adapted for the purpose in view. A check on the indications of the instrument was in a few cases applied, by taking an outline of an area on tracing paper, then cutting it out and weighing it. The weight

of 36 square inches of the same paper having been determined by another experiment, it is of course a very simple matter to compute the area embraced in a weighed tracing from a 6 inch scale map. These methods furnished results tallying so closely, that considerable confidence may be placed in the numbers deduced from the measurements by Amsler's planimeter which are presented in Table A.

In future reports occasion will probably be taken to contrast the average mortality of such crowded districts as those of Blackfriars, Calton, and Gorbals in Glasgow, and Canongate and St Giles in Edinburgh, with the death-rates of more sparse urban populations such as those of Aberdeen and Perth.

In connection with the subject of density, another table, marked B, is here introduced. It is designed to illustrate the relation between density and *proximity* of population, and requires a short explanation. If the inhabitants of a given area are aggregated with a density expressed by their numbers per square mile, and if they are assumed to be *uniformly* distributed over the area, their proximity to each other in yards may be

conveniently expressed as follows:— $p = \frac{\sqrt{2}}{\sqrt[4]{3}} \times \frac{1760}{\sqrt{D}}$. For this formula

we have to thank Dr Farr. (See English Census 1871, vol. iv. p. xxviii.) Table B includes illustrations of the relations between density and proximity of population within such limits as more than suffice for statistical purposes. As an instance of the nature of the information that may be obtained from such a table, it may be sufficient to refer to its very first line, which shows that the whole population of Scotland could easily be so distributed as to stand upon the surface of a single square mile.

TABLE B.—Proximity and Density. In constructing this Table, *p* is successively assumed=1, 2, 3, &c. The log. *c* is=3.2767474, being the log. of $\left(\frac{\sqrt{2}}{\sqrt[4]{3}} \times 1760\right)$, and of course constant. The formula for constructing the Table is :—log. *d* = 2 (log. *c* – log *p*).

DEATHS IN THE EIGHT TOWNS.

During 1877 there were 28220 Deaths registered in the Eight Principal Towns of Scotland. Hence the death-rate was 231 to every ten thousand of estimated population. A glance at the sixth column of Table VII. will show that this is the lowest death-rate recorded in the Principal Towns during the twenty-three years that the Registration Act has been in operation. The average rate for the whole period was 274·6,—that for the ten years immediately preceding 1877 being 273·8. It is satisfactory to find that during the last three years the mortality recorded in our Principal Towns has been comparatively light.

The proportion of Deaths to population in the several Towns was more uniform than usual. For every ten thousand inhabitants there were 210 deaths in Aberdeen, 212 in Edinburgh and in Dundee, 216 in Greenock and in Leith, 232 in Perth, 249 in Glasgow, and 272 in Paisley. In every one of the Principal Towns the death-rate of 1877 contrasts favourably with the mean death-rates recorded in Table IX.

The important subject of infant mortality (under which term we include all deaths that occur during the first five years of life) is illustrated by Table X. The attempt is made to show, first, what percentage of children under five years of age died in each of our Principal Towns in 1877; and secondly, what percentage of the total deaths in each Town occurred among children of the first five years of life. The former mode of statement we regard as the more important; and, in accordance with it, infant mortality appears to have been less considerable in Aberdeen,

Perth	3,186	187	5·87	30·3

and far more severe in Glasgow. For every thousand alive and under five years of age at the middle of 1877, there died in Aberdeen, 46; in Leith, 58·3; in Perth, 58·7; in Greenock, 60; in Edinburgh, 63·1; in Dundee, 64·6; in Paisley, 67·9; and in Glasgow, 82. Of every hundred deaths, those occurring at ages under five years constituted in Aberdeen and in Perth, 30·3 per cent.; in Paisley, 33·1; in Edinburgh, 36·7; in Leith, 40·1; in Greenock, 41·4; in Dundee, 41·5; and in Glasgow, 45.

Tables XI. and XII. present a statement of the mortality due to each class and principal cause of disease in each of the Eight Towns. In Table XI. the percentage of deaths to the population is recorded, while in Table XII. the relative intensity of each cause of death is shown. It is, of course, inevitable that deaths must occasionally occur in which the nature of the cause of death cannot be ascertained with the desirable precision. Hence our tables are always corrected for the number of non-specified causes of death reported from each locality; and whenever, in the course of this section of our Report, the number of deaths from any cause is mentioned, it must be understood that the correction for deaths from unspecified causes has been applied. During 1877 the deaths from unspecified causes in the Principal Towns did not exceed $\frac{1}{2}$ per cent of the deaths from all causes. Of course, the proportion was somewhat different in each town; thus, in Greenock it amounted to 13 per 1000, but in Edinburgh and Dundee it was only about 2 per 1000.

From diseases of the Zymotic Class the deaths were only at the rate of 34 to every ten thousand of estimated population, and constituted only 14·61 per cent. of the deaths from all causes. So low a mortality from Zymotic diseases has never been recorded in Scotland. It has been customary to regard the Zymotic mortality of any one of our Principal Towns as moderate when it does not exceed 50 for every ten thousand inhabitants. But in 1877 the deaths from Zymotic diseases for this number of inhabitants were 22 in Perth, 27 in Dundee, 31 in Edinburgh and in Leith, 32 in Greenock, 36 in Aberdeen, 37 in Glasgow, and 41 in Paisley. The percentage of the total deaths due to Zymotics in each town was:—9·59 in Perth, 12·68 in Dundee, 14·35 in Leith, 14·39 in Edinburgh, 14·91 in Greenock, 14·92 in Glasgow, 15·15 in Paisley, and 16·98 in Aberdeen.

In Glasgow, 3·42 per cent. of all deaths were due to Hooping-cough, and 2·7 per cent. to Measles. The mortality from all other epidemic disorders was comparatively trifling.

In Edinburgh, with the exception of Hooping-cough, which accounted for 4·11 per cent. of all deaths, Zymotic diseases may be said to have been in abeyance.

In Dundee, the mortality from Diarrhœa amounted to 3·54 per cent. of all deaths; that from Hooping-cough was 2·85 per cent.

In Aberdeen, 4 per cent. of the deaths were due to Fevers, 2·83 per cent. to Scarlatina, and 2·44 per cent. to Diarrhœa.

In Greenock, the deaths from Diphtheria, Hooping-cough, Croup, and Diarrhœa, in each case exceeded 2 per cent.

In Paisley, Hooping-cough caused 3·86 per cent. of all deaths that occurred; and from Fevers of all kinds, chiefly Typhus, the proportion of deaths was 2·72 per cent.

In Leith, 3·36 per cent. of all deaths were due to Fevers, chiefly of the Enteric type; 3·09 per cent to Hooping-cough, and 2·58 per cent. to Diarrhœa.

In Perth, there occurred a very few deaths from Scarlatina and Measles. The deaths from other Zymotic diseases were quite inconsiderable in number.

In the whole group of Principal Towns the prevalence of the chief Zymotic diseases caused the following mortality. There were 899 deaths from Hooping-cough, being 3·19 per cent. of the deaths from all causes, and 7·4 deaths for every ten thousand of estimated population. The deaths from Diarrhœa were 611, or 2·17 per cent. of all that were registered. Fevers of all kinds caused 601 deaths, or 2·14 per cent. of the total mortality. Measles with 493 deaths, Croup with 386, and Diphtheria with 346, constituted respectively 1·75, 1·37, and 1·23 per cent of the deaths from all causes.

The deaths from Enteric Fever were more than twice as numerous as those from Typhus. In Paisley alone of the Principal Towns the deaths from Typhus were more frequent than from Enteric Fever. It must, however be noted that, even from Typhus, the deaths in Paisley were only 19 in number.

From Erysipelas, the deaths were 111; from Syphilis, 130; from Metria, 70; from Rheumatic Fever, 46; from Dysentery 41; from Cholera 12; from Pyæmia, 30; and from Smallpox 19, whereof 14 occurred in Glasgow, 3 in Edinburgh, and the other 2 in Aberdeen.

To Diseases of Uncertain Seat, 898 deaths were attributed. Of these,

TABLE XI.—Percentage of Deaths from different Diseases to the Population in each of the Eight Principal Towns of Scotland during the Year 1877, allowing for the Causes not specified.

536 were due to Cancer, and 171 to Dropsy. Cancer appears to have been most destructive in Edinburgh and in Aberdeen, and least fatal in Greenock and in Glasgow. Far fewer certificates of deaths by "Dropsy" were received in 1877 than in former years, and it is to be hoped that ere long this vague term may almost cease to appear in our Tables.

Tubercular Diseases caused in the Principal Towns 5078 deaths, or about 42 deaths out of every ten thousand of estimated population. This class of diseases constituted the cause of 18 per cent. of the total mortality in the Eight Towns. To Pulmonary Consumption alone 3448 deaths were due, being 12·22 per cent. of the deaths from all causes, or fully 28 deaths for every ten thousand living at the middle of the year. The population of Paisley suffered most, and that of Edinburgh least, from Phthisis Pulmonalis. The deaths from other Tubercular Diseases were 866 from Hydrocephalus, 476 from Tabes Mesenterica, and 288 from Scrofula.

Diseases of the Brain and Nervous System caused 2822 deaths, being 10 per cent. of the mortality from all causes, and equivalent to 23·2 deaths out of every ten thousand of population. The percentage of deaths from these causes was 11·51 in Aberdeen, 11·34 in Leith, 11·32 in Edinburgh, 11·21 in Paisley, 10·59 in Dundee, 10·57 in Perth, 9·98 in Greenock, and 8·95 in Glasgow. The deaths from Brain Diseases for every ten thousand inhabitants were:—30·5 in Paisley, 24·5 in Perth,

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the Year 1877, allowing for the Causes of Death not specified.

24·3 in Leith, 24·2 in Aberdeen, 24 in Edinburgh, 22·4 in Dundee, 22·1 in Glasgow, and 21·6 in Greenock.

Diseases of the Heart and Circulatory System caused 1598 deaths, being 5·67 per cent. of the total mortality, and 13·1 deaths for every ten thousand of population. It appears that these diseases are more frequent in Perth than in any of the other Principal Towns: thus, while for every ten thousand inhabitants only 10·2 deaths from Heart Disease were recorded in Glasgow, the number in Perth was 24·2. This is the fifth successive year in which a similar observation has been made.

Diseases of the Respiratory System, from which the endeavour is made to exclude Consumption, caused 6824 deaths, or 24·2 per cent. of the deaths from all causes. The death-rate per ten thousand inhabitants was 56·1 in the Eight Towns combined, 68·8 in Glasgow, 54·1 in Dundee, 50·8 in Paisley, 46·1 in Perth, 45 in Leith, 43 in Edinburgh, 39·5 in Greenock, and 37·2 in Aberdeen. The proportion of the deaths from all causes which was due to Diseases of the Organs of Respiration varied from 27·85 per cent. in Glasgow, to 17·71 per cent. in Aberdeen.

Bronchitis alone caused 4586 deaths; Pneumonia proved fatal to 1817; Pleurisy to 110; Laryngitis, Asthma, and Lung Diseases of unspecified nature to 312. The fatality of this class of diseases is thus seen to have been in 1877 little short of that recorded for 1875.

Diseases of the Digestive System caused 1895 deaths, being 15·6 for every ten thousand of population, or 6·72 per cent. of the deaths from all causes. Diseases of the Digestive Organs were most fatal in Paisley, and least destructive in Greenock.

From Diseases of the Kidneys and Urinary System there were 448 deaths. The deaths from this class of diseases were most frequent in Aberdeen and in Edinburgh,—very much rarer in Dundee, and still more rare in Greenock.

From Diseases of the Uterus (not including 71 deaths from Metria) there died 251; from Diseases of the Joints, Bones, &c., 207; from the Debility of Infancy and Premature Birth, 1474; from Diseases of the Skin, 44; from Malformation, 99; from Atrophy, 163; from Sudden Causes, not otherwise defined, 86; from Violence, Privation, &c., 1019.

Of the Violent Deaths there is reason to believe that 52 were suicidal. From the direct effects of Intemperance there died 88; and if to these deaths there be added 26 fatal cases of Delirium Tremens, which are registered in the class of Brain Diseases, it appears that the deaths from the abuse of alcohol were 114.

Of 94 persons who died during 1877 in our Eight Principal Towns, at ages exceeding 90 years, 28 were males and 66 females. One male who died at the age of 99 in Aberdeen, had been a granite quarryman. Four females had attained the age of 98, and one, the widow of a linen-weaver, died in Glasgow at the age of 101 years.

MARRIAGES IN THE EIGHT TOWNS.

During 1877 there were 10713 Marriages registered in the Eight Principal Towns of Scotland. The estimated population of these towns being 1217943, it is computed that for over ten thousand inhabitants there have been 88 marriages. This rate is below the average experienced during the last few years. Reference to Table VIII. in the present Report,

and to the corresponding table for 1876, shows that the diminution of the marriage-rate has been most marked in Dundee and in Aberdeen. Out of ten thousand inhabitants there were married in Perth, 108; in Paisley and in Leith, 97; in Edinburgh, 96; in Glasgow, 89; in Aberdeen, 81; in Dundee, 77; and in Greenock, 70.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

It has long been customary to devote considerable space in these Annual Reports to details concerning the weather and its apparent influence upon the public health; but except as ample confirmations of the popular impression that the prevalence of cold wet weather is apt to be attended or followed by marked increase in the lethality of the most familiar epidemic disorders, and by unusual mortality from chest complaints, it is to be feared that our reiterated illustrations of the subject have been of little use. In presenting observations upon the weather of 1877 we shall confine ourselves as much as possible to tabular statements, by means of which the meteorological peculiarities of the year under review may be readily contrasted with those recorded during former years. (Tables XIII. and XIV.)

In Table XIII. will be found, in very succinct form, the main facts regarding the mean temperature and mortality experienced throughout Scotland during each month of 1877, followed by a similar statement founded upon the observations made during the decennium 1855-1864. These last observations serve for the construction of a sort of standard of mean temperature and mortality, to which it is both easy and convenient to refer the observations of subsequent years. Any marked deviation from this standard can hardly escape attention, and will suggest explanation or commentary. It may at once be gathered from Table XIII. that the chief peculiarity of the records of temperature in 1877 has been the lowness of average temperature during March and the six months immediately following. The temperature of February and of November was fully two degrees above that of the corresponding months during the decennial period. The other months presented nothing unusual as to

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1877, compared with the Mean of the Ten Years 1855-1864.

MONTHS.	YEAR 1877.				1855-1864.	
	Mean Temperature.	Actual Deaths.	Deaths when Months are equalised to 31 days.	Proportion to 12,000 per annum or 1000 per month.	Monthly Proportion of Deaths.	Mean Temperature.
January . . .	37°·6	6,952	6,952	1,107	1,134	37°·2
February . . .	39°·5	5,927	6,562	1,045	1,193	37°·4
March	33°·4	7,646	7,646	1,218	1,145	39°·8
April	41°·4	6,849	7,077	1,127	1,083	44°·1
May	45°·9	7,027	7,027	1,119	1,010	49°·5

August	55°·1	5,454	5,454	868	856	57°·3
September . . .	50°·5	4,848	5,009	798	843	52°·8
October	46°·7	5,740	5,740	914	858	47°·2
November . . .	42°·5	5,655	5,843	931	954	40°·2
December . . .	39°·3	6,521	6,521	1,038	1,073	38°·6
Year	45°·7	73,946	75,348	12,000	12,000	46°·7

temperature. January was, as usual, the coldest month ; July was the warmest, but with a mean temperature of 1°3 below the average of former Julys.

In order to form a clear idea of the relation between temperature and mortality during the successive months of 1877, the reader should bear in mind that, during December 1876, the mean temperature had been high, and the mortality under the average of the last ten Decembers. It is necessary to bear this circumstance in mind, for it is plain enough that the inclemency of any particular month may very materially increase the number of deaths in the month immediately following, even though there may be nothing remarkable in the temperature of the latter.

In what follows, the statements made in Table XIV. will be frequently referred to, and free use made of the Astronomer-Royal's elaborate notes appended to the Quarterly Reports issued by the Registrar-General.

January 1877 was characterized by a low barometric pressure, a rather high mean temperature, an unexampled number of rainy days, and a depth of rainfall only once before attained (viz. in 1863) in the recorded years. The deaths per diem were 224.

February was characterized by a low barometer, high mean temperature, a full amount of rain, and extra strength of wind ; the great preponderance of that wind being from the west, and the rain apparently with it. The deaths per diem were 212.

March was characterized by a low barometer, and a rather low mean temperature, with a great number of rainy days but no very great

TABLE XIV.—Meteorology of Scotland for 1877, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1877.

depth of rainfall, while the wind was chiefly from the west. The mortality, the heaviest recorded during any month of the year, amounted to 247 deaths per diem.

April had a mean temperature less than the average by $2^{\circ}7$. The barometric pressure likewise was less than usual. The rainfall was pretty equally distributed, and its average amount $0\cdot72$ inch above the average of former seasons. The force of the winds was above the average; their main direction a point south of due east. The daily deaths were 228.

May had a mean temperature $3^{\circ}6$ below the average. The barometer likewise stood low, but its daily range was at least half an inch more than usual. The rainfall considerably exceeded the average. The average pressure of the wind was excessive, and its prevailing currents from E.N.E. The daily number of deaths was 227, exceeding the mortality of 1875 and 1876.

June had a mean temperature very little below the average. The barometric pressure likewise was less than usual. The rainfall was excessive. The winds were strong; their general currents from S.W. by S. The daily deaths were only 190.

In *July* the chief characteristics of the weather were wet, cold, and windy; more particularly, the signs were low barometric pressure and large variations thereof, low mean temperature and small variations of it, indicating thereby a clouded sun, large humidity of the air, large number of rainy days, great depth of rainfall, large amount of strong W.S.W. wind. The daily deaths were 181.

In *August* the weather was again wet, cold, and windy; the particulars being low barometer, low mean temperature, small variation of it, large humidity of the air, large number of rainy days, excessively large rainfall, extra strength of wind nearly equally balanced from all points of the compass. The daily deaths, 176, were well within the average.

TABLE XV.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Disease, in the Eight Principal Towns of Scotland, during each Month of the Year 1877.

September was dry, but windy and cold ; or more particularly, there was large barometric pressure, low mean temperature, great daily range of temperature, ordinary humidity, less days on which rain fell, little more than half the usual quantity of rain, strong wind largely from N. and N.W. The daily deaths were only 162, indicating a very favourable condition of the public health, and less numerous than during any other month of the year.

October was characterized generally by its mean temperature being rather low, but still more by its amount of both rain and wind being very great, and that wind more westerly and southerly than is usual in October. The deaths per diem again rose to 185.

November was remarkable, almost unprecedentedly so, for low barometric pressure, great fluctuations of the barometer, high mean temperature, great number of rainy days, great depth of rainfall, great amount of wind, chiefly south-west in its direction. The daily deaths, 189, were certainly not numerous for November.

December was not far from an ordinary example of the month. The mean temperature and mean humidity were slightly above the average ; so likewise were the amount of rainfall and the number of rainy days. The winds, which were strong, had in general a westerly direction. The daily deaths were 210,—certainly not more numerous than might be expected in the month of December.

In attempting to illustrate the dependence of the mortality from certain diseases upon the meteorological peculiarities of the successive months, it will be necessary to appeal continually to Table XV. Here, however, it must be noted that our illustrations are limited to the data furnished by the Eight Principal Towns. Many months must necessarily elapse before the entries regarding the causes of deaths in the Registers throughout the whole of Scotland in 1877 can be com-

pleted, corrected, and transmitted to this office, and a few months more will be required before these can be tabulated, analyzed, and arranged for publication in the form of a Detailed Report.

It appears that in the Principal Towns the cold month of March was more fatal than any other, and that the mortality was due chiefly to excessive frequency of deaths from Diseases of the Respiratory System, and to numerous deaths ascribed to debility about the period of birth. The more genial temperature of April seems to have been connected with a diminution in this mortality, which however in May recurred. The temperature of May, it may be remarked, was about 3° below the average of that month during former seasons. From May till September the mortality underwent considerable decrease, and in September had as usual reached a minimum. October and all the winter months were in nowise remarkable. The mortality as usual increased towards the end of the year, but even in December had hardly reached the average observed during previous years.

By means of Table XV. it is easy to trace, in a general way, how far each of the more ordinary causes of death contributed to the mortality among the inhabitants of the Eight Principal Towns during each month of the year.

The deaths from Smallpox were far from numerous, and during January, August, September, and December, not a single death was referred to this cause.

Deaths from Measles and its sequelæ showed in March a tendency to increase in frequency, attained a maximum of 83 in May, and thereafter steadily declined till, in November, their number was only 22. The low temperature that prevailed in March and May sufficiently explains the comparative frequency of deaths by Measles during these months. Hooping-cough, a disease in which the inflammatory complications powerfully influence the mortality, began, as might have been expected, to predominate as an epidemic during the cold weather in March. Its ravages were not checked by the more genial April, but continued with unabated violence till the middle of summer. Yet although Hooping-cough during 1877 numbered more victims than any other epidemic disease, it was certainly not more fatal than during the average of previous years.

TABLE XVII.—Monthly Deaths at Four Periods of Life in the Eight Principal Towns of Scotland during the Year 1877, and Proportion at each Age in every hundred Deaths per month.

YEAR	11,549	2,710	8,725	5,237	28,221	40·9	9·6	30·9	18·6	100

The influence of the cold weather was less distinctly marked in the case of other familiar epidemic diseases, such as Scarlatina, Diphtheria, and Croup.

The mortality from Fevers, under which term Typhus and Typhoid Fevers are chiefly included, was during no month very serious. Deaths from these causes were most frequent in October, November, December, and during the first three months of the year.

Diarrhœa is the cause of many deaths in our Principal Towns, and these deaths for the most part occur among children in the early years of life. There can be no question that a warm summer is tolerably sure to be attended with an increase in the fatality of infantile bowel-complaints; but as the summer of 1877 was certainly the reverse of warm, it need excite no surprise to find that the deaths from Diarrhœa have been decidedly less common than usual. In August there were only 107 deaths from Diarrhœa, 70 in September, and 64 in October; but the Table shows that the minimum mortality from this disease was recorded in January and in March, the two coldest months of the whole year.

Consumption proved fatal in 398 cases in March, and in the succeeding months declined in fatality, till in November its victims were only 227 in number. In some of our former Reports, and especially in that for 1876, the unusually high mortality from Consumption during the month of May has been commented on. During 1877 no such mortality was observed. This may perhaps be partly accounted for by the comparative mildness of the month of April.

No class of diseases is more unequivocally influenced by the weather than that which includes Bronchitis, Pneumonia, and other inflammatory affections of the Organs of Respiration. It was but natural that in a cold wet year diseases of the lungs should be rife; and the sudden rise of deaths from such causes, from 558 in February to 917 in March, at once suggests that atmospheric influences must have been at work during early spring. It would be tedious to point out further how the excessive mortality of the comfortless month of March was checked during the comparatively mild April, how it subsided to a minimum in August, and thereafter steadily rose as the winter approached.

A very few words will suffice to illustrate the main facts, brought out

TABLE XVIII.—Months equalized to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1877.

MONTHS.	Relative Number of Deaths in 1877.					Monthly Deaths proportioned to 1,000 per month or 12,000 per annum.

by Tables XVII. and XVIII., as to the comparative mortality at each of four periods of life experienced during each successive month of 1878. In the first place, attention must be paid to the circumstance that the statements of Table XVIII., to which only it will be necessary to allude, refer exclusively to the population of the Eight Principal Towns, and to months equalized, by the process frequently explained in our Quarterly Reports, to a uniform length of thirty-one days.

Children under five years of age died in largest proportion during the months of December and March. The mortality was at its minimum in July, and did not much exceed this minimum in September. It seldom happens that the warmest month of the year is likewise distinguished by the lowest rate of infant mortality; but in 1877 there was during summer no such heat as commonly induces Diarrhoea among infants.

Among adolescents, or those aged between five and twenty, deaths were most frequent in May, June, March, and April,—during those months, in short, in which the influence of Consumption and of Diseases of the Organs of Respiration was most marked. The minimum mortality of adolescents was in October and November.

Adults, under which term are grouped all persons between twenty and sixty years of age, suffered far more severely during March than at any other time of the year. Deaths among this class were at a minimum in September. The mortality among adults recorded in Table XVIII. was very clearly influenced by the deviations from the normal temperature of the successive months exhibited in Table XIII.

Among the aged, or those who had attained their sixtieth year, the fluctuations of mortality varied from month to month in a manner not materially differing from what has been noted in regard to the class of adults.

Among the whole inhabitants of the Eight Principal Towns the deaths during each month were in the following order of fatality: March, May, April, December, January, February, October, June, November, August, July, and September.

THIRTEENTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1876.

In the Report that follows will be found all the usual information regarding the vaccination of the children born in Scotland during the year 1876. While endeavouring to show as plainly as possible how far the requirements of the Vaccination Act have been carried out, we shall of

TABLE XIX.—Vaccinations in Scotland, 1866–1876, and Proportion to the Births each Year.

course have occasion to allude to the numbers of certified deaths from Smallpox registered in Scotland both before the passing of the Vaccination Act, and since 1864 when that measure became law. Occasion will likewise be taken to mention any cause that seems to interfere with, or limit, the efficiency of the Vaccination Act; but it will hardly be necessary to take serious notice of the persistent cry of the "anti-vaccinators," which in Scotland can hardly be said to excite even a feeble echo.

Table XIX. in its first division, contains an account of the Births registered in Scotland during each of the ten years 1866 to 1875 inclusively; of the number of successfully performed vaccinations effected upon the children; and of the number of children to whom, for various causes, separately tabulated, it has been found impossible to extend the benefit of the protection contemplated by the Act. The first division of the table is followed by two lines, in the first of which the average numbers for the decennium are given, and in the second the numbers applicable to the year 1876 alone. The remaining portion of the table merely repeats in the form of percentages the statements already made in its first division in actual numbers.

The Births registered in Scotland during 1876 numbered 126706. Of these children, 111815, or 88·248 per cent. were successfully vaccinated as the Act directs, and 348 were pronounced by the regular vaccinators "unsusceptible" by reason of previous vaccination, performed in an irregular though successful manner. The true number of successfully vaccinated was consequently 112163, and the percentage on the births was 88·523. In 1034 instances, or in 0·816 per cent. of all born, vaccination was postponed for medical reasons. In 177 cases, children were pro-

nounced insusceptible of vaccination from some undefined constitutional peculiarity, other 5 from having had Smallpox, and the 348 already mentioned from having been previously though irregularly vaccinated. 10760 children, or 8·492 per cent. of all born, died unvaccinated, before completing the sixth month of life. Finally, 2567, or 2·025 of all born, were removed from the districts in which they were born, or otherwise abstracted from the observation of the Registrars. It is assumed that most of these 2567 children are at the present time still unvaccinated.

Table XX. is constructed on the model of Table XIX, but takes account only of such children born in 1876 as survived till they were six months old. It shows that out of 115946 such children in 1876, 111815 were vaccinated as the Act directs, and that if to these there be added 348 children who were pronounced to be insusceptible by reason of successful vaccination irregularly performed, there were 112163, or 96·737 per cent. of all who attained the age of six months who might be considered as protected against Smallpox. In 1034 cases, or in 0·892 per cent. of all that reached the age of six months, vaccination had been postponed for reasons satisfactory to the medical man signing the certificate. In former Reports we have stated our opinion, that the number of these postponements is undesirably large; and that it would probably be materially reduced if, by additional legislation or otherwise, parents and guardians could be induced to secure for their children the benefits of vaccination before they complete the fourth month of life. The existence at present of a period of six months of permissive inaction causes the operation to be often deferred till the period of teething is at hand, and till skin diseases and other symptoms of ill health on the part of a child, discourage the vaccinator from performing the operation. In 530 cases, or 0·457 per cent. of all children that reached the age of six months, certificates of insusceptibility were granted. In 5 of these cases, the child had already passed through an attack of Smallpox, and in 348 other cases the insusceptibility was probably real, being accounted for by the previous performance of the operation of vaccination without the formalities prescribed by the Act. But in 177 cases, representing 0·153 per cent. of all that attained the age of six months, it is to be feared that the term “constitutional insusceptibility” is merely equivalent to a statement that the vaccinator had thrice performed the usual operation and thrice failed. Those who have had the largest experience in vaccination

TABLE XXI.—Deaths from Smallpox in Scotland, 1855–1877.

* For 1875, 1876, and 1877, the Smallpox Deaths are estimated from the ascertained Smallpox Deaths in the Principal Towns, as compared with the Total Smallpox Deaths in all Scotland during the Twenty Years 1855–1874.

are, we believe, well aware that insusceptibility, when real, can almost invariably be traced to its true cause, and that constitutional insusceptibility is so rare that its even occasional occurrence is somewhat doubtful.

Out of the children that attained the age of six months, 2567, or 2·214 per cent., are here assumed to remain unvaccinated. This number includes all who, from any cause, have been lost sight of by the Registrars. Although it is quite possible that some of these may have already received the benefit of vaccination in an irregular way, or may ere long receive it, yet it is quite certain that a large number of the children of tramps and vagrants do annually escape the vigilance of the Registrars, and it is to be feared will remain unvaccinated and unprotected against Smallpox for the rest of their lives. It seems unnecessary to reiterate our belief that, by reducing to three or four months the period during which parents and guardians are not subjected to penalty for permitting their children to remain unvaccinated, the Legislature have it in their power considerably to diminish the numbers of the unvaccinated.

Uniting the numbers in the fifth and eighth columns of Table XX.,—that is, by summing together the numbers of those styled “constitutionally insusceptible” and of those lost sight of by the Registrars,—we find that in 2744 cases, or in 2·367 per cent. of all that reached the age of six months, the benefits of vaccination were not obtained, and the children continued unprotected against Smallpox. These 2744 cases, then, represent the failures of the Vaccination Act in Scotland during 1856.

In Table XXI. may be found the number of deaths from Smallpox which have occurred in Scotland during each year from 1855 to 1877 inclusive. Up to 1874 this list may be regarded as correct; but the numbers for the year 1875–6–7, to which an asterisk is affixed, are only estimated, and probably do not represent the full number of deaths that will be ultimately recorded in the Detailed Annual Reports for these three years.

Table XXII. exhibits the deaths from Smallpox in the Eight Principal Towns of Scotland in 1877, also during the ten years 1865–1874, compared with those of the ten years 1855–1864, during which there was no law enforcing vaccination. The table professes to exhibit the number of deaths from Smallpox at each of four periods of life. In lieu of commentary there is subjoined a list of the whole nineteen cases which constitute the deaths attributed (provisionally) to Smallpox and to Varicella in the Eight Towns during 1877. It will be seen that the list includes

TABLE XXII.—Smallpox Deaths in the Eight Principal Towns of Scotland at different Ages in 1877, also during the Ten Years, 1865–1874, compared with those of the Ten Years, 1855–1864, in the same Towns before the Vaccination Act came into operation.

one death erroneously attributed to vaccination in the first instance by a non-medical informant,—and four deaths from Varicella or Chickenpox.

The deaths from Smallpox were :—

1. A male child, 6 months old. Nothing known as to vaccination.
2. A female, aged 34. *Said to have been vaccinated, but no mark visible.*
3. A boy of 6 years died of confluent Smallpox on the 12th day. No mention of vaccination.
4. A male, aged 29—unvaccinated.
5. A female, aged 19—unvaccinated.
6. A male, aged 25—unvaccinated.
7. A female, aged 23—*one bad vaccine mark.*
8. A male, aged 21—unvaccinated.
9. A female, aged 15—unvaccinated.
10. A male, child of 7 months—unvaccinated.
11. A male, aged 19—unvaccinated.
12. A male child of 18 months. Nothing known as to vaccination.
13. A female, aged 14. Nothing known as to vaccination.
14. A male, aged 29. Nothing known as to vaccination.

In addition, the list comprehends the following cases which should not be classified under the head of Smallpox :—

15. A male child of 4 weeks. Varicella and Convulsions.
16. A boy, aged 6. Varicella and Meningitis.
17. A male child of 5 months. Chickenpox and Bronchitis.
18. A boy, aged 7 months. Chickenpox.
19. A boy, aged 6 months. This case was originally returned, *uncertified*, with the following cause of death attached, “Bad effects of Vaccination.” On investigation, the cause of death turned out to have been Diarrhœa, altogether unconnected with vaccination.

It is necessary to mention here one unfortunate case, the only one hitherto reported to the Registrar-General, in which there is reason to believe that the operation of vaccination was the means of infecting a child with syphilis which soon proved fatal. The death, which occurred in Leith, formed the subject of some correspondence between the superintendent of statistics and the medical gentleman who certified the cause of death, and from whose very clear statement the following account of the case is epitomized.

A married woman in Leith gave birth to twins. Before the expiry of the statutory period, she presented them for vaccination at a public institution in Edinburgh. One of the twins was vaccinated from a tube and did well. It fared differently with the other, which was vaccinated from the arm of another child which had itself been vaccinated eight days before. The mother of the twins is stated to have expressed some doubts as to the state of health of the child from which the lymph was to be supplied, but her scruples were removed by the assurance of the operator that they were unfounded. The second twin thus vaccinated soon afterwards showed unequivocal symptoms of acquired syphilis, and its death at the age of nine months took place on the 16th August 1877 from exhaustion caused by the syphilitic infection. The medical informant, while professing to have no sympathy with anti-vaccinators,

very properly expresses his opinion, that this unfortunate death should be recorded as a warning against the possible consequences of indiscriminate vaccination even at a public institution. * It will be generally admitted that it illustrates the necessity for great caution in investigating the state of health of every child from which it is proposed to take vaccine lymph for the purpose of vaccinating others.

In the course of former Reports ample evidence has been adduced of the saving of human life effected by the introduction of the Vaccination Act into Scotland; and in the Detailed Annual Report for 1873 the subject was illustrated by tables showing the rates of mortality from Smallpox, both before and after the Act came into operation, among children aged from 0 to 6 months, and among those aged from 6 to 12 months. It is now in our power to take a further step in analyzing the effects of the Act, by contrasting the mortality from Smallpox during each of the first five years of life, for each of the ten years immediately preceding the passing of the Act, and for each of the ten years that have elapsed since it became law. In order to do this, and at the same time to supply data available for statisticians who may be engaged in kindred inquiries, the following Supplemental Tables A B and C are presented. In A are given the estimated numbers of children alive in Scotland in each of the first five years of life, during each of the twenty years 1855-74. In Table B are recorded the numbers of the registered deaths from Smallpox in the 1st, 2d, 3d, 4th, and 5th years of life, in each of the twenty years. In Table C the rates of mortality are presented as experienced by each hundred thousand children living at the five ages mentioned during each of the years comprised in the tables. Each table is divided into two equal parts; and thus the general results obtained by examining the Smallpox mortality of the period when no vaccination law existed may be very conveniently contrasted with those

furnished by the later and equal period during which a very effectual protection against Smallpox has been offered by the existing statute. It is very interesting to observe the marked diminution of the mortality which characterises the latter period. Undoubtedly it would be still more satisfactory if it were possible to give an accurate account of the

SUPPLEMENTAL TABLE B.—Deaths from Smallpox during each of the First Five Years of life, registered in Scotland during each year from 1855 to 1874, a period of 20 years.

number of cases of Smallpox, and of the number of deaths from Smallpox that occurred at each age and during each year, first among the vaccinated children, and second, among children unvaccinated, or about whose thorough vaccination doubt exists. No materials for such a statement are, however, here available. The death certificates in cases of Smallpox do not always state whether the deceased had been vaccinated or not; and as to the number of cases in which death is not the termination of the disease, no information is communicated to the Registrars. What we do know with considerable accuracy is the number of deaths from Smallpox that occur at each age, and the fact that of late years, out of the children born in Scotland and who arrive at the age of six months, less than 3 per cent. are unvaccinated. Of course, it may be likewise safely assumed, that before the Vaccination Act came into operation, the proportion of unvaccinated children must have been higher. With these remarks the tables are commended to the attention of any candid inquirer who has doubts about the benefits to the public health which a good vaccination law can confer.

I have the honour to be,

SIR,

Your most obedient Servant,

WILLIAM ROBERTSON, M.D.

XI.—ABSTRACT of the METEOROLOGY of the Eight Principal Towns of Scotland during the several Months of the Year 1877.

Mean Height above the Sea-level, 111 feet. Mean Latitude, 56° 12'. Mean West Longitude, 3° 30'.

1877.	BAROMETER.		SELF-REGISTERING THERMOMETER.						HYGROMETER.		DEDUCTIONS from Glaisher's Tables, 2d Edit.				RAIN.		WINDS.									Mean Pressure on square foot.
	Mean at 32° and Sea-level.	Monthly Range.	Highest in Month.	Lowest in Month.	Mean Temperature.	Monthly Range.	Mean Daily Range.	Greatest Daily Range.	Dry Bulb, or Mean Temp. of Air.	Wet Bulb, or Temp. of Evaporation.	Dew-point Temperature.	Elastic Force of Vapour.	Wt. of Vapour in Cubic Foot of Air.	Humidity. Sat. 100.	Number of Days it fell.	Amount.	Number of Days it blew in certain Directions.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.
N.B.—An asterisk “*” is prefixed to those Districts which comprise one or more Parishes or parts of Parishes, and the component parts of these Districts will be found at page 79.
A dagger “†” is prefixed to those Districts which consist of only a part of the Parish of the same name.

APPENDIX.

VACCINATIONS, 1876.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

2. ORKNEY.

14. DEERNESS.—The Registrar-General's suggestion, that the most favourable period for vaccination of children is previous to teething, has been particularly called attention to, and is beginning to be acted upon.

24. ROUSAY AND EGILSHAY.—All the entries are completed for the year ended 31st December 1876.

27. SANDWICK.—Parents have long been so carefully trained as to the value of vaccination by the parish minister, who is the Public Vaccinator, that there is no difficulty in getting them to comply with the Act.

3. CAITHNESS.

39. OLRIG.—Requirements of Act well attended to.

4. SUTHERLAND.

53. LAIRG.—Vaccination well attended to.

II. NORTH-WESTERN DIVISION.

5. ROSS AND CROMARTY.

Mainland.

66. (2.) SOUTHERN DISTRICT OF GAIRLOCH.—The residents of the south side of the loch have sometimes a difficulty in crossing the ferry with their children to the nearest vaccination station at Strath. The Parochial Board might advantageously arrange to have a new vaccinating station for the convenience of this district, either at Badachro or Opinan.

74. LOCHALSH.—Act now somewhat better attended to, though there is still room for improvement. The Public Vaccinator holds that his appointment under the Act has reference only to paupers and defaulters, and consequently that he may charge others any fee he thinks proper. The Registrar cannot believe that this interpretation of the Act is correct, for it would manifestly be very unjust to compel people to get their children vaccinated, and make no provision for getting it done at a reasonable charge. Of the four entered in Col. 7, one was certified as having been removed from the parish before vaccination; another, the child of a shepherd, has been twice on the list of defaulters submitted to the Parochial Board, but the Vaccinator has hitherto declined to go so far for the usual fee of 2s. 6d.; the other two were vaccinated long ago, but owing to the fees not having been paid, or some other reason, the certificates have not yet been given

in. This clearly contravenes the 8th Sect. of the Act, yet it is more the rule than the exception.

75. (1.) LOCHBROOM.—Act remarkably well attended to. The Doctor is most punctual and indefatigable in his duties, and the Inspector does his part very systematically. We had not a single defaulter on our last half-yearly list.

79. RESOLIS.—Vaccination well attended to. Parents seem to see the propriety of vaccinating their children, and the Vaccinator is very attentive to his duties. The only defaulter is a vagrant, who left and could not be found.

83. TARBAT.—No difficulty is found in working the Act, except that the schedules are not transmitted within the statutory period. This arises from two mitigating causes—that we have no medical practitioner within 11 miles, and that when it may be convenient for him to attend it may not be convenient for poor parents to have the fee ready. The Registrar is indebted to the present medical officer of the Parochial Board for intimation of his intended visits for purposes of vaccination; this materially aids in getting the children brought forward. The Act would work more pleasantly if the medical fee for vaccination were, being compulsory, paid either from the Imperial or Local Treasury.

6. INVERNESS.

Mainland.

96b. (2.) ROTHIMURCHUS.—Vaccination well attended to. No postponement nor case of insusceptibility took place during the year.

97. (1.) GLENELG.—Act works satisfactorily. The Registrar is, however, under the necessity of sending second notices in many cases, and if the defaulters were compelled to pay even the shilling for these notices, it would have the effect of making parents more punctual. Where the Vaccinator, the Inspector of Poor, and the Registrar work harmoniously together, there is little difficulty experienced in the administration of the Act.

99. (1.) GLENGARRY.—Act works very well, except when the operation has to be performed far from the Doctor's residence, causing him far more expense than the fees can meet; or, on the other hand, laying on the parents a journey of 70 or 80 miles, which sometimes happens in the coldest season, with the roads for a considerable distance very imperfect.

Insular.

111. (1.) HARRIS.—The continued illness during the last five months, and the recent death,

of the Public Vaccinator, have very much arrested the progress of vaccination.

114. (2.) RAASAY.—Vaccination rather better attended to, but the last list of defaulters contained 20 names.

III. NORTH-EASTERN DIVISION.

7. NAIRN.

122. CAWDOR.—Incessant dunning is required in order that the certificates may be sent in.

8. ELGIN (OR MORAY).

131. DUFFUS.—There being no resident medical practitioner, it is generally late before the operation is performed.

9. BANFF.

149. BOYNDIE.—Vaccination is complete in all the Registers from the commencement of the Act to the end of 1875; but during last year much less attention was paid, and consequently greatly increased and unremunerated trouble incurred.

155a. GAMRIE.—Continues to work satisfactorily.

159. KEITH.—Postponements very numerous, and still increasing. The Registrar believes that compulsory vaccination at an earlier period (say four months after birth) would go far to lighten this almost intolerable postponement arrangement.

10. ABERDEEN.

174. BELHELVIE.—Act working well.

183. CRATHIE AND BRAEMAR.—Vaccination fairly attended to.

186. CULSAMOND.—Act still requires the Registrar's close attention.

201. GLENMUICK.—Generally well attended to. Remote cases where parents, not aware of the requirements of the Act, allow the statutory period to run out, are attended to without delay on receipt of the prescribed notice.

11. KINCARDINE.

265. MARYKIRK.—Much annoyance caused by postponements.

IV. EAST MIDLAND DIVISION.

12. FORFAR.

276. CARMYLLIE.—Act well attended to.

282. (2.) ST MARY (DUNDEE).—Since the disappearance of Smallpox as an epidemic, so much attention has not been paid to the requirements of the Act. More notices require to be issued, and the number of defaulters has increased. The Registrar is still of opinion that the period allowed for vaccination should be shortened to three or four months.

282. (4.) ST ANDREW (DUNDEE).—A very large number of parents still delay getting their children vaccinated until the statutory notice is sent, and the excuse very generally is, as in past years, that the medical men advise them to do so. In many cases, notices have to be repeated, causing a great amount of labour to the Registrar. The result on the whole is, however, again very satisfactory. Of 1838 children, only 12 are unaccounted for. In last Return reference was made to the large number of children "insusceptible of vaccine disease on the ground of previous vaccination." There is an increase in this class, and the same doubtful practice continues of midwives vaccinating and a medical man signing certificates for them. There is no other district, or even town, in Scotland where this practice is so largely carried on.

283. DUNNICHEN.—Act continues to work well.

312. MONTROSE.—Nearly one-half of the certificates had to be called in by the usual notice to parents. The Registrar is of opinion that vaccination should be made compulsory before the termination of the fourth month of infant life.

13. PERTH.

342. CRIEFF.—Vaccination comparatively well attended to, but a good deal of attention is necessary to keep the books clear.

348. DUNBLANE.—Great difficulty in getting in certificates. Parents seldom think of obtaining them until they receive the Registrar's notice.

350. DUNNING.—With reference to the case entered under Col. 7, the parents of the child left this district before vaccination, but the Inspector of Poor for Abernethy states that the child has been vaccinated, as it bears the usual marks: the Vaccinator, however, has gone to India without granting a certificate.

14. FIFE.

411. BURNTISLAND.—The Act would operate better if the time for vaccination was limited to three or four months. The Medical Officer is strongly of this belief.

423. DUNBOG.—One child has been unsuccessfully vaccinated three times. The Medical Officer is to try it again.

451. NEWBURN.—All seem anxious and careful to carry out the requirements of the Act.

V. WEST MIDLAND DIVISION.

17. STIRLING.

479. (2.) FALKIRK (Landward).—Act works well. Medical gentlemen most attentive.

18. DUMBARTON.

495. CUMBERNAULD.—A good deal of annoyance caused by the dilatoriness, and inattention of the mining population in the west of the parish, to the requirements of the Act. At least 50 or 60 notices to defaulters have been sent during the year—two or three times to some parties. Several children of defaulters were successfully vaccinated, but the medical men decline to grant or forward certificates without payment of their customary fee (1s. 6d. or 2s. 6d.).

498. KIRKINTILLOCH.—Vaccination complete for 1876. The mortality of infants appears to have been very high—fully 12 per cent. having died before attaining the age of six months.

19. ARGYLL.

Mainland.

505. (1.) ACHARACLE.—The five outstanding cases will shortly be attended to by the new Medical Officer.

526. LOCHGILPHEAD.—The large number of postponements is chiefly due to the prevalence of Scarletina, Hooping Cough, Colds, &c. In fact, the schools had to be broken up twice during the year for several weeks. In reply to notices issued lately, pressing for Schedule A before the close of the year, the Registrar found that, with the exception of two or so, all the postponed cases will be successfully vaccinated in a short time.

Insular.

551. (1.) TYREE.—As a general rule, vaccination is performed after the expiry of the statutory period, but in no case was the operation neglected or unsuccessfully performed.

20. BUTE.

556. LOCHRANZA.—The Vaccinator resides at such a distance from the district that it is almost

impossible for parents or guardians of children in destitute circumstances to get them vaccinated within the time specified by the Act. All are very anxious to have their children vaccinated, if circumstances would permit.

VI. SOUTH-WESTERN DIVISION.

21. RENFREW.

560. CATHCART.—There are at present four to whom special notice was given by the Parochial Board that the Vaccinator would call to vaccinate their children. Three of these have had the operation performed, although the result is not yet known; but one—a reverend gentleman—has decidedly refused to allow his child to be vaccinated. This case will be brought before the Board at next meeting.

571. MEARNS.—The only difficulty is caused by the carelessness of parents keeping the schedule long after the children have been vaccinated. The greater part have to be reminded of their duty in this respect more than once.

22. AYR.

590. (2.) TROON.—Many have to be reminded of the time allowed for vaccination, and, as a rule, the blame for neglect is laid on the Medical Officer, as parents consider it is his duty to remind them. Generally speaking, however, certificates are got well in, after the parties are written to. If only three months were allowed instead of six, and the doctor paid a small fee, it might be an improvement. Of the 93 births registered, only one left the district, and 13 died before vaccination.

594. GIRVAN.—The Registrar has always had considerable difficulty in getting the certificates returned within the statutory period, and in no case has he been able to procure the fee of 1s. for the circulars.

597. KILMARNOCK.—Return continues favourable, number of unaccounted for being only 11 in 1036 births. A constant look-out requires to be kept for defaulters.

23. LANARK.

660. WISTON AND ROBERTON.—Great difficulty

is felt in getting the certificates from the vaccinator, and although in some cases the time has elapsed, certificates are, nevertheless, dated within the six months.

VII. SOUTH-EASTERN DIVISION.

25. EDINBURGH.

677. COLINTON.—The vaccinations unaccounted for are, with few exceptions, from Craiglockhart Poorhouse.

686. FALA AND SOUTRA.—Two postponements still remain for 1876. The children have been suffering from skin disease.

690. KIRKNEWTON AND EAST CALDER.—Prompt vaccination may be said to be the exception, not the rule. There is an amount of seemingly careless indifference, and the Registrar has considerable difficulty in getting the certificates at the appointed time. It is believed if the term were reduced from six to three or four months, vaccination would be more promptly attended to.

696. NEWTON.—The only difficulty experienced is in the case of parties removing from the parish.

27. BERWICK.

732. COLDINGHAM.—Parents and vaccinators very attentive.

739. EYEMOUTH.—The Act entails a vast amount of extra labour and responsibility on the Registrar, and the fee ought to be doubled.

VIII. SOUTHERN DIVISION.

30. ROXBURGH.

783. BOWDEN.—Certificate of vaccination expected from parents of child removed from district.

32. KIRKCUDBRIGHT.

857*a*. BALMAGHIE.—Parents, and especially Vaccinator very attentive.

868. KELLS.—Vaccination very successful.

893. NEW LUCE.—The Registrar has considerable trouble in getting the schedule within the prescribed time from some of the parents. Why not fine defaulters, and give the money to the poor of the parish if not to the Registrar? So long as it costs them nothing they will receive the "notice" with perfect complacency.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
596	Carnoch	Parts of Contin, Fodderty, and Urray.
716	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
866	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir (2) Rest of Kilmuir and part of Snizewell.
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbry.
147	Banff	Banff, and part of Gamrie.
152	Enzie	Parts of Bellie and Rathven.
1556	Glenrinnies	Parts of Aberlour and Mortlach.
167	Seafeld	Parts of Cullen and Rathven.
217	Logie-Coldstone & Cromarty	Logie-Coldstone, and part of Glenmuick, etc.
2226	Millbren	Parts of Fyvie and Monquhitter.
227a	New Machar	New Machar, and part of Uduy.
227b	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
240	Strathdon	Strathdon, and part of Tarland.
2496	Ythan Wells	Parts of Auchterless and Forgue.
272	Arbroath	Arbroath, and part of St Vigean.
282	Dundee	Dundee, and part of Liff, Benzie, and Invergowrie.
312	Montrose	Montrose, and part of Dun.
324	Aberfeldy	Parts of Dull, Fortingall, Kenmore, Logierait, and Weem.
3286	Ardoch	Parts of Blackford, Dunblane, and Muthill.
331	Balquhidder	Balquhidder, and part of Comrie.
333	Blackford	Blackford, and part of Ardoch.
344	Dowally	Part of Dunkeld and Dowally.
348	Dunblane	Dunblane, and part of Ardoch.
349	Dunkeld	Parts of Caputh and of Dunkeld and Dowally.
355a	Fortingall	Parts of Fortingall and Weem.
355b	Foss	Part of Dull.
360	Kenmore	Parts of Kenmore and Weem.
361	Killin	Parts of Kenmore, Killin, and Weem.
367	Kinloch-Rannoch	Parts of Fortingall and Logierait.
375	Logiealmond	Parts of Fowls-Wester, Little Dunkeld, Methven, Monzie, and Redgorton.
379	Meigle	Meigle, and part of Coupar-Angus.
386a	Muthill	Muthill, and part of Ardoch. [Kinloch, and Rattray.
386b	Persie	Parts of Alyth, Bendochy, Blairgowrie, Caputh, Kirkmichael, Lethendy and
387	Perth	Perth, and parts of Kinnoull, Scone, and Tibbermore.
394b	Strathfillan	Part of Killin.
394c	Tenantry	Parts of Blair-Athol, Dull, and Moulin.
423	Dunbog	Dunbog, and parts of Abdie and Flisk.
424	Dunfermline	Parts of Dunfermline and Inverkeithing.
432	Inverkeithing	Parts of Inverkeithing and Dunfermline.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
4816	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
490	Stirling	Stirling, and small part of St Ninians.
493	Bonhill	Bonhill, and part of Dumbarton.
496	Dumbarton	Parts of Cardross and Dumbarton.
506	Ballachulish, etc.	Part of Kilmallie.
509	Cumlodden and Minard	Parts of Glassary and Inveraray.
512	Glenorchy	Glenorchy, and part of Inishail.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan	(1) Parts of Kilchrenan, etc., and Inishail.
526	Lochgilthead	Parts of Glassary and South Knapdale.
529	Muckairn	Muckairn, and part of Inishail. [Knapdale.
535	Tarbert	Parts of Kilcalmonell and Kilberry, of Saddell and Skipness, and of South
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
542	Kilfinichen and Kilvieken	Parts of Kilfinichen and Kilvieken, and of Torosay.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelve	Part of Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and of Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
556	Lochranza	Parts of Kilbride and of Kilmory.
557	North Bute	North Bute, and part of Rothesay.
559	Abbey	(1) Parts of Abbey and Renfrew (2 and 3) Rest of Abbey.
573	Paisley	High, Middle, and Low Church Parishes.
578	Ayr	Ayr, and parts of Newton-upon-Ayr, and of St Quivox.
595	Irvine	Irvine, and part of Dundonald.
612	St Quivox, etc.	Parts of Newton-upon-Ayr, and St Quivox.
6266	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	City of Glasgow, including Gorbals and parts of Barony and Govan
670	Queensferry	Queensferry, and part of Dalmeny.
684	Portobello	Parts of Duddingston and South Leith.
685	Edinburgh	City of Edinburgh, including Canongate and parts of St Cuthberts, Dudding- ston, Liberton, and South Leith.
690	Kirknewton & East Calder	Kirknewton and East Calder, and part of Kirkliston.
692	Leith	(1) Parts of Cramond, North Leith, and St Cuthberts; (2) Parts of North Leith, St Cuthberts, and South Leith.
6986	Stobhill	Parts of Borthwick, Cockpen, Newbattle, and Temple.
774a	Caddonfoot	Parts of Galashiels, Selkirk, Yarrow, Innerleithen, and Stow.
776b	Ladhope	Part of Melrose.
787b	Edgerston	Parts of Jedburgh, Oxnam, and Southdean.
8136	Brydekirk	Parts of Annan, Cummertrees, and Hoddam.
8536	Wanlockhead	Part of Sanquhar.
8576	Bargrennan	Parts of Minnigaff (Kirkcudbright) and of Penninghame (Wigtown)
862	Corsockbridge	Parts of Balmaclellan, Kirkpatrick-Durham, and Parton.
864	Dalbeattie	Part of Urr.
899	Stranraer	Stranraer, and parts of Inch and Leswalt.

LIST of REGISTRATION DISTRICTS which include BURGHS, or TOWNS of 2000 Inhabitants and upwards, or parts thereof, bearing a different name from the Districts in which they are situated.

* The actual number of Districts is 1032—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

REPORT.

TO THE

RIGHT HON^{BLE}. R. ASSHETON CROSS, M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 2d April 1879.

SIR,

In accordance with the requirements of the Scottish Registration Act (17 & 18 Vict. cap. 80), I have now the honour to submit to you a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1878, which has been drawn up in the usual form, with a view to its being laid before Parliament.

I have likewise the honour to submit to you, in accordance with Section 19 of the Vaccination Act (26 & 27 Vict. cap. 108), the Fourteenth Annual Report on Vaccination, embracing the usual details relative to the vaccination of children whose Births were registered in Scotland during the year 1877. It will be seen that this Report gives the most satisfactory assurance as to the working

of the Scottish Vaccination Act ; and indeed the circumstance that, during the year 1878, there were registered in the Eight Principal Towns of Scotland only three deaths caused by Small-pox, affords strong presumptive evidence as to the efficiency of the Vaccination Laws in this country.

I have the honour to be,

SIR,

Your most obedient Servant,

W. PITT DUNDAS,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY WILLIAM ROBERTSON, M.D., F.R.S.E.

SIR,

IN the following Report it is endeavoured to submit all the usual details relating to the Births, Deaths, and Marriages registered during the year 1878 in the 1033 Registration Districts of Scotland. As an appendix to the general Annual Report there is subjoined the Fourteenth Report on Vaccination, in which I have endeavoured to include all available information collected by this department regarding the working of the Scottish Vaccination Act, and more especially as regards its application to the vaccination of children born in Scotland during 1877.

The population of all Scotland, estimated to the middle of 1878, was 3,593,929. If it may be assumed that the annual rates of increase of males and females deduced from the census enumerations of 1861 and 1871 have, since the latter date, remained undisturbed, the number of males in 1878 was 1,724,320, and that of females 1,869,609. During 1878 there were registered 126707 Births, 76775 Deaths, and 24333 Marriages. These figures, together with similar data for recent years, contained in Tables I. and II., show that the birth-rate of 1878 has been

TABLE I.—Population estimated to the middle of each year, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1878, and their Proportion to the Population; also the Excess of Births over Deaths, the Number of Illegitimate Births, and their Proportion to the Total Births.

BIRTHS.

126707 Births were registered in Scotland during 1878, being at the rate of 3·53 per cent., or of 353 for every ten thousand of estimated population. The number and proportion of births in each of the five new registration groups of districts are stated in Tables IV. and V. In the Eight Principal Towns the registered births were 44297; in the Large Towns, 16225; in the Small Towns, 29518; in the Mainland-Rural Districts, 33386; and in the Insular-Rural Group, 3281. On comparing these figures with those recorded in the general Annual Report for 1877, it is seen that the diminution in the number of births during 1878 has been most conspicuous in the Principal Towns and in the Mainland-Rural Districts, while in the Large Towns the births of 1878 considerably outnumbered those of 1877. The birth-rate of the Large Towns amounted to 4·46 per cent., and as usual far exceeded that of any other registration group. The birth-rate of the Small Towns was 3·65 per cent.; that of the Principal Towns, 3·57; that of the Mainland-Rural Districts, 3·18; and that of the Insular-Rural Group, 2·55 per cent.

Of the registered births, 10589 were illegitimate, being in the proportion of 8·36 per cent. In the Insular-Rural Districts the percentage of illegitimate births was 5·97; in the Large Towns, 6·97; in the Small Towns, 7·75; in the Principal Towns, 8·26; and in the Mainland-Rural Districts, 9·93 per cent.

Table VI. presents the usual account of the relative frequency of illegitimacy in the geographical divisions and separate counties of Scotland. As regards the divisions no marked change can be traced in the statistics of illegitimacy during 1878. The Southern and North-Eastern Divisions continue to furnish the most formidable contributions to the list of bastards; while in the West-Mainland and North-Western Divisions the proportions of illegitimacy are far less considerable.

In the counties of Ross and Cromarty the illegitimate constituted only 4 per cent. of the total births, and in other four counties, viz., Shetland, Dumbarton, Bute and Renfrew they did not amount to 6 per

TABLE III.—Births, Deaths, and Marriages in each of the Eight Divisions of Scotland during the Year 1878, and their Proportion to the Estimated Population.

Of the 126707 live births registered in 1878, 65323 were males and 61384 were females. For every hundred girls there were consequently 106·4 boys born. In the Insular-Rural Districts, however, in which of late years the preponderance of male births has been most remarkable, there were born 110·6 males for every 100 females.

Births were most numerous in May, when 379 per diem were registered; least numerous during September and December, when the daily registrations were only 325.

DEATHS.

There were 76775 Deaths registered in 1878, being very nearly in the proportion of 214 for every ten thousand of estimated population. This death-rate is considerably within the ten years' average, though it slightly exceeds the rates of 1876 and 1877.

The average number of deaths was greatest in December, when 265 per diem were registered; but in October the recorded deaths were at the rate of only 174 per diem.

In the Large Towns the mortality was as usual most considerable, amounting to 280 per ten thousand of estimated population; in the Principal Towns the rate was 237; in the Small Towns, 210; in the Mainland-Rural Districts, 173; and in the Insular-Rural group of Districts, 152. On contrasting these figures with the rates recorded in the general Annual Report for 1877, it appears that the slight increase in the death-rate during 1878 was most felt in the Large Towns; that it was far less remarkable in the other urban districts; and that in the Rural (and more especially in the Insular) Districts the mortality of the year now under review was lower than that of the year immediately preceding.

MARRIAGES.

24333 Marriages were registered in Scotland during 1878, being at the rate of scarcely 68 for every ten thousand of estimated population. On reference to Table II. it may be seen that so low a marriage-rate has not been recorded in Scotland since 1869, and that in spite of the annual increase of population, the actual number of marriages was greater during each of the six years 1872–1877 than during 1878. It cannot be doubted that the rapid fall in the marriage-rate which is thus recorded was directly connected with the dulness of trade, the lowness of wages, and the serious commercial and financial disasters experienced, more especially during the later months of 1878.

On examining Table V. it may be found that in the Principal Towns the marriage-rate was only 78 for every ten thousand inhabitants, whereas the rate during the preceding year had been 88; that in the Large Towns the rate was 81 per ten thousand of population, being a mere trifle lower than the rate of 1877; that in the Small Towns the rate was 64 per ten thousand, being a diminution of 4 per ten thousand when contrasted with the recorded rate for 1877; and that in the Midland-Rural Districts the rate was only 56 per ten thousand. In the Insular-Rural Districts only the marriage-rate of 1878 surpassed that of 1877 by about 6 per ten thousand; but when the very small numbers of

marriages in the Insular Districts is considered, it becomes obvious that their somewhat exceptional experience as regards marriage-rate during 1878 does not require further notice at present.

The average daily number of marriages registered in January was 104; in February, 50; in March, 46; in April, 53; in May, 40; in June, 117; in July, 81; in August, 48; in September, 51; in October, 51; in November, 76; and 91 in December. On comparing these figures with similar details contained in the Quarterly Report for 1876 and 1877, it appears that the chief peculiarity in the experiences of 1878 has been the paucity of the daily marriages during the month of December.

EIGHT PRINCIPAL TOWNS OF SCOTLAND.

The remaining sections of this Report refer almost exclusively to the record of events furnished by the Registers of the Eight Principal Towns of Scotland. It is sometimes affirmed by those imperfectly conversant with such subjects, that similar data from the whole of Scotland might be obtained and arranged with like promptitude for the general Annual Reports; and that the Detailed Annual Reports might consequently be superseded. It is admitted that were it possible so to shape our short period returns that the materials which serve for the construction of the Weekly, Monthly, and Quarterly Reports should reach the central office with like dispatch from every parish or district in Scotland; were it possible that returns so obtained could be trusted without examination and correction by the officers whose duty it is to scrutinise the entries in the Registers; were it expedient to tolerate in the permanent records of the mortality of Scotland the absence of medical certificates of death in perhaps forty per cent. of all deaths that occur; were it wise to ignore the whole system of labour that has been carried on in this department since 1855; and, finally, were it reasonable to hope that, for the sake of satisfying for a time the cry for statistical reform, or statistical assimilation throughout Her Majesty's dominions, a very large sum of money should be annually expended in Scotland;—then, it is admitted, that the publication of Detailed Annual Reports might be superseded. But those thoroughly acquainted with the machinery of registration in Scotland must best know how unsafe it would be to interfere with its present satisfactory working.

Perhaps the strongest argument in favour of very speedy publication of the details regarding the deaths in Scotland is, that by such publication the hands of local and sanitary authorities would be strengthened, and public attention called to unsuspected or unrevealed sources of danger to public health, which it might be possible to prevent, or at least very desirable to try to counteract. But in answer to this argument it seems sufficient at present to point out that any information likely to be of use to sanitary authorities would be far more appropriately conveyed in the Weekly and Monthly Reports; and that, if withheld for a twelvemonth, such information cannot be acted on, but becomes, as it were, a mere piece of medical history, which, indeed, may have its value, but altogether apart from its applicability to prophylaxis.

By your direction great changes have been recently made in the

form of the Weekly and Monthly Reports issued in Scotland, and, as opportunity presents itself, every effort is made to increase their utility. In particular the co-operation of the medical profession in the Eight Principal Towns has been invited in an effort to publish the causes of deaths on the authority of medical certificates as soon as possible. At present ten days from the death are by law allowed to medical practitioners for the transmission of their certificates; but as under this arrangement fully 20 per cent. of all the deaths in our short returns are *provisionally* referred to a "cause" on the authority of credible, though possibly non-medical, informants, it is greatly to be desired that all medical certificates of death should be forwarded to the Registrars immediately after the occurrence of the deaths to which they relate, and it is confidently hoped that members of the medical profession will assist the statistical department in this matter.

BIRTHS IN THE EIGHT PRINCIPAL TOWNS.

44297 Births were during 1878 registered in the Eight Principal Towns of Scotland. There were consequently 357 births for every ten thousand of estimated population. The highest birth-rate was in Leith, and the lowest in Edinburgh. For every ten thousand inhabitants the births were 333 in Edinburgh, 334 in Dundee, 352 in Greenock, 356 in Perth, 357 in Aberdeen, 364 in Glasgow, 391 in Paisley, and 414 in Leith.

Of the 44297 Births in the Eight Principal Towns, 3659, or 8·26 per cent., were illegitimate. The illegitimate constituted 5·5 per cent. of the total births in Greenock, 5·8 per cent in Leith, 6 per cent. in Paisley, 8 per cent. in Perth, 8·1 per cent. in Glasgow and in Edinburgh, 10·6

TABLE VII.—Births, Deaths, and Marriages, and their Proportion to the Population, in the Eight Principal Towns of Scotland, during each of the Years 1855–1878.

1875	1,171,228	43,621	3·72	30,983	2·64	10,670	0·91
1876	1,194,357	44,245	3·70	27,971	2·34	10,735	0·90
1877	1,217,943	44,538	3·66	28,220	2·32	10,713	0·88
1878	1,241,995	44,297	3·57	29,410	2·37	9,728	0·78

The numbers for 1876, 1877, and 1878 are made up from the Quarterly Returns; the remainder from the Detailed Annual Reports, where the figures are corrected.

per cent. in Dundee, and 11 per cent. in Aberdeen. If, however, the relative births among possible mothers be considered, the Principal Towns rank in the following order:—Paisley, with 1·57 per cent. of illegitimacy; Edinburgh, with 1·58 per cent.; Greenock, with 1·82 per cent.; Perth, with 1·98 per cent.; Dundee, with 2·05 per cent.; Glasgow and Leith, with 2·19 per cent; and Aberdeen, with 2·67 per cent.

Of the 44297 births recorded in the Eight Principal Towns, 22723 were males and 21574 females. The number of boys was consequently at least 105·3 for every 100 girls, a proportion slightly below that observed during 1878 among the births in all Scotland.

DEATHS IN THE EIGHT TOWNS.

The Deaths registered during 1878 in the Eight Principal Towns of Scotland were 29410. Hence the death-rate was 237 for every ten thousand of estimated population. By means of the sixth column of Table VII. it is easy to see that this mortality is far under the average of the last ten years, which in fact amounted to about 270 per ten thousand of persons living. And although the death-rate of 1878 was slightly higher than the rates of 1876 and 1877, it certainly indicates no very unfavourable condition of the public health during the year now under review.

In Table IX. the proportion of deaths to population is exhibited for each of the Eight Principal Towns. It appears that during 1878 there died out of every ten thousand inhabitants of Greenock, 207; of Dundee, 215; of Leith, 218; of Edinburgh, 220; of Aberdeen, 221; of Perth, 240; of Glasgow, 250; and of Paisley, 326. The mortality of Glasgow, of Dundee, and especially of Greenock, was far below the ten years' average; but in Paisley the death-rate of 1878 was exceptionally heavy.

TABLE VIII.—Births, Deaths, and Marriages, and their Proportion to the Population, during the Year 1878, in each of the Principal Towns of Scotland; Estimated Number of Unmarried Women and Widows between 15 and 45 years of age; also the Illegitimate Births, and their Proportion to the Total Births, and to the Number of possible Mothers.

In Table X. will be found the usual annual contribution to the important subject of infant mortality. It consists, first, of an estimate for each of the Eight Principal Towns of the number of children living in each at ages under five years; secondly of a column stating the number of deaths of such children in each Principal Town; third, of a statement of the percentage of such deaths to the living under five years of age; and fourth, of the percentage of deaths under five years to the deaths at all ages. The information conveyed by the third column of the Table will be generally considered as the most important, since it enables one to ascertain, almost at a glance, the relative salubrity of each town as regards infant life during the year 1878. Thus, it is at once obvious that infant mortality has been low in Perth and Greenock, but comparatively very high in Paisley. For every thousand living at ages under five years at the middle of 1878, there died during that year in Perth, 57·7; in Greenock, 57·8; in Aberdeen, 63·8; in Leith, 65; in Dundee, 70·7; in Edinburgh, 74·4; in Glasgow, 86·4; and in Paisley, 91·5. Of every hundred deaths, those occurring among children under five years old constituted 28·8 per cent. in Perth; 37·3 per cent. in Paisley; 39·9 per cent. in Aberdeen; 41·6 per cent. in Edinburgh; 44·2 per cent. in Leith; 44·8 per cent. in Dundee; and 47·3 per cent. in Glasgow.

In Tables XI. and XII. are given statements regarding the mortality ascribed to each class of disease and principal causes of death in each of the Eight Principal Towns. In Table XI. the percentage of deaths to the numbers of living persons is recorded; while in Table XII. the relative frequency of each cause of death is exhibited. Probably the former

Perth	3,189	184	5·77	28·8

view is the more generally useful; but there are statistical purposes for which the second table is specially adapted. Occasion has already been taken to point out that the true cause of death cannot always be assigned on medical authority, or that it is not always stated in the Registers in such terms as enable us to tabulate it in our annual statements. Of course such Tables as XI. and XII. are always carefully corrected for the numbers of deaths from unspecified causes registered in each town, by methods which it would be tedious and unnecessary here to explain. During 1878 the deaths from unspecified causes in the Principal Towns amounted to only about 0·6 per cent. of all deaths that took place. The rate was not the same in each of the Eight Towns, but varied from 2 per 100 in Greenock, to 0·3 per 100 in Edinburgh and Dundee. From diseases of the Zymotic class there occurred 18·61 per cent. of all deaths that were recorded; and by these diseases 44·4 out of every ten thousand of estimated population were removed. This mortality is by no means unusual. On the contrary, as has been frequently pointed out, the Zymotic mortality in one of the Eight Principal Towns is not generally regarded as excessive unless it exceeds 50 per ten thousand inhabitants. Now in 1878 the deaths from Zymotic diseases in this number of inhabitants were, in Greenock, 27; in Perth, 36; in Leith, 36; in Edinburgh, 41;

in Dundee, 42; in Aberdeen, 45; in Glasgow, 47; and in Paisley, 66. The percentage of total deaths due to Zymotic diseases was 13·06 in Greenock, 14·87 in Perth, 16·67 in Leith, 18·12 in Edinburgh, 19·03 in Glasgow, 19·72 in Dundee, 20·25 in Aberdeen, and the same in Paisley.

In Glasgow, Hooping-cough accounted for 7·21 per cent. of all deaths, Diarrhœa for 3·22 per cent., Measles for 2·03 per cent., Fevers, chiefly Enteric, for 1·89 per cent. The mortality due to the other Zymotic diseases was comparatively trifling.

In Edinburgh, 4·23 per cent. of all deaths were due to Measles, 4·05 per cent. to Hooping-cough, 2·60 per cent. to Diarrhœa, and 2·29 per cent. to Fevers, for the most part of the Enteric type.

In Dundee 4·60 per cent. of the deaths were caused by Diarrhœa; 3·78 per cent. by Hooping-cough; 3·56 per cent. by Measles; 2·16 per cent. by Scarlatina; and 2·09 per cent. by Fevers, of which Enteric or Typhoid were the most frequent.

In Aberdeen, 5·71 per cent. of all deaths were ascribed to Hooping-cough, 3·34 per cent. to Fevers, Typhus slightly predominating; 2·93 per cent. to Scarlatina, 2·83 per cent. to Diarrhœa, and 2·01 per cent. to Diphtheria.

In Greenock, 3·43 per cent. of deaths were due to Hooping-cough, and 2·11 per cent. to Diphtheria. The incidence of Fevers and of other Zymotic diseases was so slight as not to require notice in this place.

In Paisley, 6·84 per cent. of all deaths were due to Scarlatina, 4·10

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the Year 1878, allowing for the Causes of Death not specified.

DISEASES CAUSING DEATH.	Total Eight Towns.	Glasgow.	Edinburgh.	Dundee.	Aberdeen.	Greenock.	Paisley.	Leith.	Perth.

per cent. to Fevers, among which Enteric Fever was by far the most frequent form; 3·54 per cent. to Diarrhœa, and 2·53 per cent. to Hooping-cough.

In Leith, 4·56 per cent. of deaths were from Diarrhœa, 3·15 per cent. from Measles, and 3·07 per cent. from Fevers, for the most part of the Typhoid or Enteric form.

In Perth, Diarrhœa accounted for 3·64 per cent. of all deaths; Hooping-cough for 2·37 per cent; Fevers for a like number, whereof the great majority were cases of Enteric Fever; Scarlatina for 2·06 per cent.

In the whole group of Principal Towns the following mortality was attributed to the most familiar Zymotic diseases. There were 1587 deaths from Hooping-cough, being 5·43 per cent. of all deaths that were registered, and 13 deaths for every ten thousand of estimated population. From Diarrhœa there were 950 deaths, being 3·25 per cent. of all deaths that occurred, and 7·8 deaths per ten thousand of population. From Measles there were 664 deaths, being 2·27 per cent. of all deaths, and 5·4 deaths per ten thousand living. The 502 deaths ascribed to Scarlatina were 1·72 per cent. of all deaths registered, and 4·1 per ten thousand of population. Fevers caused 663 deaths, being 2·26 per cent. of all deaths that occurred, and 5·4 deaths out of every ten thousand living. Croup with 329 deaths, and Diphtheria with 294, constituted respectively 1·13 and 1 per cent of the gross mortality.

The relative frequency of Typhus and of Enteric Fever was as 10 to 26. In Aberdeen alone of the Eight Towns was Typhus the more frequent cause of death. There were only 3 deaths attributed to Relapsing Fever.

The deaths from Syphilis were 92; from Erysipelas, 82; from Metria, 66; from Rheumatic Fever, 50; from Cholera, 35; from Dysentery, 31; from Pyæmia, 35; and from Small-pox, 3, whereof 2 occurred in Glasgow and 1 in Aberdeen.

In regard to these Small-pox deaths, careful inquiries were made as to vaccination. The first, a female rag-cutter in Aberdeen, 18 years of age, was *said* to have been vaccinated; but the medical attendant felt doubts on this subject, and inclined to the belief that she was *not* successfully vaccinated.

The second, a mercantile clerk in Glasgow, 32 years of age, was stated by the informant to have been vaccinated.

The third, a male child of an oil and colour merchant in Glasgow, 7 months and 3 weeks old, had never been vaccinated, the operation having been *postponed*.

The deaths from diseases of Uncertain Seat were 933, of which 553 were attributed to Cancer and 191 to Dropsy. Cancer seems to have been most destructive in Aberdeen, Perth, and Edinburgh—far less frequent in Greenock and in Glasgow. It is to be regretted that the vague term Dropsy is still of too frequent occurrence as a registered cause of death, but in the absence of a medical certificate the Registrars are of course justified in accepting this term, when tendered in explanation of a death, by an ordinary informant.

Tubercular diseases caused 5224 deaths in the Eight Principal Towns, being 42·6 deaths in every ten thousand of estimated population, and constituting 17·87 per cent. of the mortality experienced during the year. The deaths from Pulmonary Consumption alone were 3436, being

11·76 per cent. of the deaths from all causes, and 28 deaths for every ten thousand persons living. The populations of Glasgow and of Paisley suffered in highest proportion from Consumption; those of Aberdeen and of Leith were far less seriously affected by this cause of death. There were 892 deaths from Hydrocephalus, 565 from Tabes Mesenterica, and 331 from Scrofula.

From diseases of the Brain and Nervous System there were 2819 deaths, being 9·64 per cent. of the mortality from all causes, and constituting 23 deaths out of every ten thousand persons living in the Eight Principal Towns. The percentage of deaths from this class of diseases was 12·66 in Perth, 11·61 in Greenock, 11·44 in Leith, 10·57 in Dundee, 10·19 in Paisley, 10·10 in Aberdeen, 9·8 in Edinburgh, and 8·69 in Glasgow. The deaths from this class for every ten thousand of estimated population were 33·2 in Paisley, 30·4 in Perth, 25·0 in Leith, 24·1 in Greenock, 22·7 in Dundee, 22·4 in Edinburgh, 22·3 in Aberdeen, and 21·7 in Glasgow.

Diseases of the Heart and Circulatory System caused 1604 deaths, being 5·49 per cent. of the deaths from all causes, and 13·1 deaths for every ten thousand persons living. As in 1877, we again find that the mortality from heart diseases is far higher in Perth than elsewhere; thus while in Greenock there died of these diseases in 1878 only 10·9 per ten thousand inhabitants, the corresponding rate in Perth was 26·2. On analysing the mortality of six successive years we have made a similar observation as to Perth.

From diseases of the Respiratory System, excluding Consumption, there were 6238 deaths, being 21·34 per cent. of the total deaths, and 50·9 deaths out of every ten thousand living. The death-rate in a like number of inhabitants was 59·6 in Glasgow, 56·5 in Paisley, 46·1 in Aberdeen, 44·3 in Dundee, 42·9 in Edinburgh, 38·5 in Leith, 38·3 in Perth, and 33·7 in Greenock. The proportion of all deaths that was ascribed to diseases of this class varied from 23·90 in Glasgow to 15·98 in Perth. Upon the whole it seems that diseases of the lungs were not so frequent, or at least so fatal, in 1878 as during the year immediately preceding.

Bronchitis alone caused 4293 deaths, Pneumonia proved fatal in 1586 cases, Pleurisy in 99, Laryngitis, Asthma, and Lung disease of unspecified nature in 260.

Diseases of the Digestive System caused 2015 deaths, being 16·4 for every ten thousand of population, and 6·89 out of every hundred deaths from all causes. Deaths ascribed to diseases of the Digestive System were especially frequent in Paisley, comparatively rare in Perth and in Dundee.

From diseases of the Urinary System there were 516 deaths, being 1·77 per cent. of the mortality from all causes. The deaths due to diseases of this class were most frequent in Perth, Aberdeen, and Paisley; least frequent in Greenock.

From diseases of the Uterus (not including 66 deaths attributed to Metria) there died 212; from diseases of the Joints, Bones, &c., 163; from the Debility of Infancy and Premature Birth, 1577; from Skin diseases, 36; from Malformations, 113; from Atrophy, 194; from sudden causes not otherwise defined, 77; from Violence, Privation, &c., 977.

Of the violent deaths there is reason to believe that at least 46 were suicidal. There being no coroners' inquests in Scotland, it is permissible to express a suspicion that the number of cases of suicide

is in these reports considerably understated. From the direct effects of intemperance there were 74 deaths. Adding to these 23 fatal cases of Delirium Tremens, we have 97 deaths due to the abuse of alcohol.

Of 73 persons who died during 1878 in the Eight Principal Towns, at ages exceeding 90 years, 16 were males and 57 females. A weaver's widow had attained the age of 103, and a ploughman's widow died after nearly completing her 101st year.

MARRIAGES IN THE EIGHT TOWNS.

During 1878 there were 9728 Marriages registered in the Eight Principal Towns of Scotland. The estimated population of these towns being 1,241,995, it is computed that for every ten thousand inhabitants there were 78 marriages. It need hardly be said that this rate is far below the average deduced from the experience of the last few years. On referring to the Tables marked VIII. in the present Report and likewise in that for 1877, it may be seen that a diminution of marriage-rate took place in every one of the Eight Towns during 1878, and that such diminution was least considerable in Edinburgh and in Paisley. Out of the thousand inhabitants there were married during 1878 in Paisley, 94; in Edinburgh, 92; in Leith, 82; in Perth, 79; in Glasgow, 78; in Aberdeen, 76; in Dundee, 64; and in Greenock, 61.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

Before presenting any account of the weather which prevailed during the successive months of 1878, it seems right to remind the reader that December of 1877 had presented no very remarkable meteorological peculiarities, but was in all respects an ordinary example of a Scotch December. The temperature, humidity, amount of rainfall and number of rainy days were all very slightly above the ten years' average. The winds were strong with a general prevalence of westerly currents. The daily deaths were 210, by no means an unusual mortality for December.

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1878, compared with the Mean of the Ten Years 1855-1864.

MONTHS.	YEAR 1878.				1855-1864.	
	Mean Temperature.	Actual Deaths.	Deaths when Months are equalised to 31 days.	Proportion to 12,000 per annum or 1000 per month.	Monthly Proportion of Deaths.	Mean Temperature.
January . . .	38°·0	7,187	7,187	1,101	1,134	37°·2
February . . .	41°·5	6,465	7,158	1,097	1,193	37°·4
March . . .	40°·3	6,668	6,668	1,022	1,145	39°·8
April . . .	45°·5	7,204	7,444	1,141	1,083	44°·1
May . . .	50°·3	6,325	6,325	969	1,010	49°·5
June . . .	55°·5	5,985	6,185	948	956	55°·6
July . . .	59°·5	6,125	6,125	939	895	57°·6
August . . .	58°·6	5,874	5,874	900	856	57°·3
September . . .	54°·3	5,345	5,523	847	843	52°·8
October . . .	48°·9	5,406	5,406	829	858	47°·2
November . . .	38°·0	6,186	6,392	980	954	40°·2
December . . .	30°·7	8,005	8,005	1,227	1,073	38°·6
Year . . .	46°·8	76,755	78,292	12,000	12,000	46°·7

January of 1878 was nearly an average month in mean temperature, humidity, and strength of wind. The prevailing air currents were from west and north. The daily number of deaths, as recorded in Table XIV., was 232.

February was unusually fine, with a high and steady barometric pressure, extremely high mean temperature, few rainy days, little depth of rain, little wind, and that chiefly from the west-south-west. The deaths were at the rate of 231 per diem.

March was on the whole remarkably fine, the barometer being generally high, the mean temperature rather greater than usual. There was less rain and less wind than in the corresponding month of previous years. The prevailing winds were from north-west. The daily deaths were only 215.

April had a mean temperature exceeding the average by 0·6. The barometric pressure was slightly below the average. The rainfall was less than the average by 0·41 inch. The force of the wind was less than the average, and its direction chiefly from the east, though oftener from south-east than north-east, in the proportion of 3 to 1. There were registered 240 deaths per diem.

May had a mean temperature of 51°, greater than the average by 1°·3. The mean barometric pressure was 0·239 under average. The rainfall exceeded the average by 0·88 inch. The pressure of the wind was very much below the average. The death-rate sank to 204 per diem.

TABLE XIV.—Meteorology of Scotland for 1878, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1878.

1878.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Year.

June had a mean temperature and barometric pressure very slightly below the average. There was a considerable deficiency of rainfall. The pressure of the wind was below the average, and its direction chiefly east and north-east. The deaths registered were at the rate of 199 per diem.

In *July* the mean temperature exceeded the average by $1^{\circ}9$; the barometric pressure was likewise high. The amount of rainfall was remarkably scanty. The daily number of registered deaths was 198.

In *August* the mean temperature was $1^{\circ}7$ above average. The barometer stood 0.151 inch above average. There was a preponderance of east wind. The season was wet on the east but dry on the west coast. There were registered 189 deaths per diem.

September had a mean temperature of 2° above the average. The barometer stood a trifle below the average. The rainfall was moderate; and the winds too were moderate, westerly air currents predominating. The deaths registered during September were at the rate of 178 per diem.

October had a high mean temperature, exceeding by $2\frac{1}{2}$ degrees the average of previous years. The barometric pressure was 0.187 inch below the mean. It appears that the month was nearly normal in most of its meteorological particulars, and especially favourable in mean temperature. The average direction of the wind was from south-west. The registered deaths numbered on an average 174 per diem.

In *November* the mean temperature was $2^{\circ}2$ below the average. The mean barometric pressure likewise was rather low. On the whole, November was characterised by low temperature, little rain, and preponderance of northerly wind. The rainfall was far heavier on the east

than on the west coast. The average daily number of registered deaths was 206.

December was by far the most inclement month of the year. Its mean temperature, $31^{\circ}4$, was no less than eight degrees below average. The barometric pressure, 29.664 inches, was 0.134 inch below the average of previous Decembers. The main characteristic of December 1878 was the extremely low mean temperature which converted most of the so-called rainfall into snow. There was comparatively little wind; such as there was had an unusual amount of north-west in its direction. The maximum of rain or snow fell at Aberdeen, being 4.69 inches, and the minimum was recorded at Perth, being 1.47 inch. There were 258 deaths registered, on an average, on each day of the month.

In Tables XIII. and XIV. will be found much information relative to the meteorological peculiarities of the successive months of 1878, and as to the average numbers deduced from the ten years' observations, 1855-1864. These last observations we are accustomed to regard as a sort of standard, any great deviation from which is deserving of note, and, if possible, of explanation. On the most cursory examination of the two temperature columns of Table XIII., it becomes at once apparent that the only months of 1878 which seem to have been exceptional as regards temperature, were November, which was about two degrees colder than average Novembers, and especially December, which was fully *eight degrees colder* than during previous years. That the deaths in such circumstances should considerably increase in frequency towards the end of the year was only naturally to be expected, and such an increased mortality our Tables very plainly illustrate.

On referring to Table XV. it will be seen that at the commencement of the year under review the mortality of the Eight Principal Towns was

slightly below the average, that it continued to fall during the next two months, but that during April it exceeded the average, apparently in consequence of a rather unusual frequency of deaths from diseases of the brain and nervous system, for the prevalence of which at this season it seems at present impossible to account. From May to November the mortality was under average, and continually decreased, attaining its annual minimum in October. In November, as we have already pointed out, the approach of winter appeared to induce a tendency to increased mortality, and in December the deaths were far over average. It is necessary here briefly to review the chief causes of death mentioned in Table XV., in order to point out the share which each had in producing the mortality of the Eight Principal Towns during the year.

The deaths from Small-pox were only three in all—a most satisfactory circumstance, for which we have no doubt, in a great measure, to thank our excellent Vaccination Act, and the commonsense of our people, which does not dispose them to receive without qualification the statements of the anti-vaccinators.

Measles had its maximum number of victims in March, its minimum in September. It again prevailed rather more extensively in December, as it had likewise done during the months of January and February, before attaining its maximum intensity. Hooping-cough was rather frequent when the year commenced, steadily increased in frequency till June, declined during the next four months, and again became more prevalent during the cold weather which closed the year. Deaths from Scarlatina, Diphtheria, and Croup rather fluctuated in frequency, but on the whole were most numerous during December, least numerous in May.

Fevers numbered but few victims. The deaths from these causes were most frequent in October, March, and December, least frequent in July and in August.

Diarrhœa is a very common cause of death among the children in the Eight Principal Towns of Scotland, and as multiplied experience proves, it is during hot seasons that it is most apt to prevail. In June, an average month, the deaths from Diarrhœa had been only 40 ; but in July, nearly two degrees above average, they rose to 194 ; and in August and September, both months of unusually high temperature, they were

246 and 139 respectively. By November, under the influence of approaching winter, the deaths from this disease had again fallen to 45.

Deaths from Consumption were most frequent in April, rather less so in June, May, and March, still less frequent in September, and especially few in October. The influence of weather upon the fatality of this chronic disease it would be waste of time to attempt, by means of our Table, to trace.

It is well understood that diseases of the Respiratory Organs, such as Bronchitis, Pneumonia, Pleurisy, and Laryngitis, are, more than any other class of diseases, influenced by cold ungenial weather. In ordinary years it is during the winter months that diseases of the lungs chiefly prevail, and during an exceptionally inclement winter, especially if it has set in suddenly and unexpectedly, deaths from such causes are apt to be unusually numerous. In 1878, after the fine warm summer, the deaths from diseases of this class had been only 393 in October. In November the deaths, no doubt in consequence of the cold weather which characterised the latter half of the month, had risen to 640; and under the malign influence of the intensely cold December the maximum of 1033 was attained.

In concluding our Annual Report it is customary to make a few remarks upon the mortality experienced at each of four periods of life in the Principal Towns. These remarks are based upon the statements made in Tables XVII. and XVIII. It is to the latter Table only that it will be expedient to direct attention at present; and to fix the ideas of the reader, this Table is adjusted by equalising the months to a uniform length of thirty-one days, and showing the proportionate number of deaths in each month and at each period of life.

Children under five years of age died in highest proportion in April (when Convulsions were unusually frequent), and likewise in February, July, and December. The excessive mortality in July was probably due to the prevalence of Diarrhoea. The minimum mortality of children was, as usual, in September.

Adolescents, or those aged between 5 and 20, died in greatest proportion in December, in April, and in June. It has already been

TABLE XVIII.—Months equalized to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1878.

MONTHS.	Relative Number of Deaths in 1878.					Monthly Deaths proportioned to 1,000 per month or 12,000 per annum.

YEAR	13,236	3,107	8,510	5,134	29,987	12,000

pointed out that deaths from Consumption were most frequent in April—a circumstance which may assist in explaining the unusual mortality of adolescents during this month. September, October, and November appear to have been the most salubrious months for those living at this period of life.

Adults, including all persons aged between 20 and 60 years, and of course comprising the great majority of the labouring population of the country, died, as might have been expected, in greatest proportion during the very inclement weather in December. They likewise died in unusual proportion in April and in January. The minimum mortality of adults was in October.

Aged persons, or those who had reached the age of 60 years, died in highest numbers in December, January, and March. The influence of cold weather upon those whose respiratory and circulatory systems offer weak points sufficiently explains the mortality of the first two mentioned months. That of April is probably connected with the unusual number of deaths attributed to head diseases, such as Apoplexy and Paralysis, during the year—a circumstance which we confess ourselves at present unable to explain, but which will probably receive some elucidation when the Detailed Annual for 1878 is written. August and October appear to have been the most healthy months for persons of 60 years and upwards.

Among the whole inhabitants of the Eight Principal Towns of Scotland the deaths during each month ranked as follows in order of frequency:—December, April, January, February, March, November, June, May, July, August, September, and October.

FOURTEENTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1877.

The following Report is designed to embrace all the details which this department can supply regarding the vaccination of children born in Scotland during the year 1877. It will show in the usual form how far the provisions of the Vaccination Act have been carried out by

TABLE XIX.—Vaccinations in Scotland, 1867–1877, and Proportion to the Births each Year.

Years.		Success-fully Vaccinated.	Vaccination Post-poned.	Insusceptible of Vaccination.			Died before Vaccination.	Removed from District before Vaccination, or otherwise unaccounted for	TOTAL BIRTHS.
				From Constitutional Insusceptibility.	From having had Small-pox.	From previous Vaccination.

those entrusted with their administration in Scotland; and will, where occasion affords, allude to any points in which the working of the Act may seem susceptible of improvement. It may, *in limine*, be stated that the Scottish Vaccination Act continues to be most efficient in its operation, that it meets with the cordial approval of the medical profession, and that the general good sense of the population of the country is not found favourable to the dissemination of the anti-vaccine paradox.

It seems unnecessary either to admit or to deny the good intentions of those who, at great trouble and probably at some little expense to themselves, seek to discourage the practice of vaccination, and who in some of their pamphlets have seen fit to express grave dissatisfaction with the Reports which it has been my duty from time to time to submit to you. Such pamphlets are calculated to do little mischief even among the ignorant, and require no serious refutation at our hands.

In the first division of Table XIX. will be found the numbers relative to the births and vaccinations that were registered in Scotland during each of the ten years 1867-76. These figures show how many children were successfully vaccinated, how many had their vaccination postponed, how many were from various causes certified as insusceptible, how many died unvaccinated before completing the sixth month of life, and finally how many were removed from the district in which they were born, or were for other reasons lost sight of by the Registrars.

The average numbers for the ten years, and the numbers registered

TABLE XX.—Vaccinations in Scotland, 1867-1877, deducting from the Births those who died before they could be Vaccinated, and giving the Proportion of the Vaccinated to the surviving Births of each year.

in 1877, complete the first section of Table XIX. Its second portion consists merely of the percentages deduced from the numbers previously given.

During 1877 there were registered in Scotland 126900 births. Of these children, 112299, or 88·438 per cent., were successfully vaccinated in conformity with the requirements of the Act; and 480, or 0·378 per cent., were by the regular vaccinators pronounced "insusceptible," vaccination having been previously performed successfully though not by persons legally qualified to grant a valid vaccination certificate. In 1304 instances, or 1·028 per cent. of all born, postponement of vaccination took place on production of medical authority. In 180 cases, or 0·141 of all born, children were pronounced insusceptible in consequence of some supposed or undefined constitutional peculiarity, and other 4 from having had Small-pox. Finally, 2329, or 1·835 of all born, were lost sight of by the Registrars in consequence of their having been removed by parents or guardians from the districts in which they were born. In regard to the majority of these children, it is to be feared that at the present time they still remain unvaccinated.

Table XX. is constructed like Table XIX., but takes cognisance of only such children born in 1877 as were alive after the completion of their sixth month of life. It may be seen from the statements of this Table that out of 116526 children born in 1877, and who survived for six months, 112229, or 96·312 per cent., were duly vaccinated in strict conformity with the provisions of the Act. If to these there be added 480 children on whom the operation of vaccination had been successfully performed by irregular practitioners, 112709 of the children that attained the age of six months, or 96·723 per cent., were known to have been duly vaccinated. In 1304 instances, or in no less than 1·119 per cent. of all children attaining the age of six months, vaccination had been postponed on medical authority. It is not doubted that good reasons may have existed for these postponements; still there can be no question that their number is far larger than is desirable, or than it would certainly be if all parents and guardians realized the serious consequences that may result from unnecessarily "putting off" the performances of their statutory duty in regard to vaccination. Of the three deaths from Small-pox occurring in the Principal Towns, and chronicled

TABLE XXI.—Deaths from Small-pox in Scotland, 1855–1878.

YEARS.	Small-pox Deaths.	YEARS.	Small-pox Deaths.
1855	1,309	1867	100
1856	1,306	1868	15
1857	845	1869	64

1864	1,741	1876	28*
1865	383	1877	35*
1866	200	1878	6*

* For 1876, 1877, and 1878, the Small-pox Deaths are estimated from the ascertained Small-pox Deaths in the Principal Towns, as compared with the Total Small-pox Deaths in all Scotland during the Twenty Years 1855–1874.

in the Annual Report for 1878, one is known to have occurred in the case of a child whose vaccination had been postponed till nearly two months after the expiry of the period during which vaccination may legally be deferred. And as (*pace* G. S. Gibbs, Esq.) the death by Small-pox of a duly vaccinated child is, in this part of the world at least, a circumstance of extreme rarity, if indeed it ever occurs at all, it is hardly possible to resist the conclusion that the death above alluded to would not have occurred had the child been presented for vaccination before the completion of its fourth month of life. On letting the eye run over the percentages recorded in the fourth column of the second portion of Table XX., it is at once apparent that the frequency of these postponements is increasing, and that in point of fact they have never been so frequent for the last ten years as in 1877. In 664 cases, or 0·57 per cent. of all children living at the age of six months, certificates of “insusceptibility” were granted. In 484 of these cases the insusceptibility was no doubt real, being in four instances due to the children having had Small-pox, and in the remaining instances to the effectual performance of vaccination by irregular practitioners, whose certificates the Registrars cannot for the purposes of the Vaccination Act accept. In 180 cases, however, or in 0·154 per cent. of all children aged six months, the certificate of insusceptibility was granted on account of some constitutional peculiarity. It is to be feared, notwithstanding, that this assumed constitutional insusceptibility denotes no permanent condition, and merely indicates that the operator has thrice failed in producing the characteristic vesicle by means of vaccination. It seems very desirable that parents who have received such certificates regarding their children should be occasionally reminded that the certified insusceptibility will be in all probability of no long duration, and that a due regard for the welfare of their offspring suggests that its reality should be tested by future and repeated attempts at vaccination.

Of the 116626 that attained the age of six months, 2329, or 1·999 per cent., are assumed to have remained unvaccinated. We say “assumed,” for although it is very probable that some of this considerable number may have in an irregular way received the protection of vaccination, yet it is quite certain that the far greater proportion of the number consists of the children of tramps, vagrants, and other persons of nomadic habits, alike ignorant and careless of their statutory obligations. Such children, when once abstracted from the vigilance of the

TABLE XXII.—Small-pox Deaths in the Eight Principal Towns of Scotland at different Ages in 1878, also during the Ten Years 1865–1874, compared with those of the Ten Years 1855–1864, in the same Towns before the Vaccination Act came into operation.

Registrars, are not likely to become aware of the beneficent provisions of 26 & 27 Vict. cap. 108, but will continue unvaccinated, constituting an ever accumulating source of danger to each other, and to the communities with which they may chance to mix. It is necessary here once more to express an opinion that the period of six months during which inaction as to the vaccination of a child is permissible should be curtailed; and that by its abridgment the lists of postponements and insusceptibilities would be materially reduced.

By combining the statements of the fifth and eighth columns of Table XX., we find that the united numbers of the so-called "constitutionally insusceptibles," and of the children unaccounted for at the age of six months by the Registrars, was, in 1877, only 2509. These cases then, constituting 2.15 per cent. of the children that reach the age of six months, represent the failures of the Vaccination Act during the year now under review.

In Table XXI, will be found the usual account of the deaths from Small-pox in Scotland during each year from 1855 to 1878 inclusively. The deaths during the last three years are not, however, those enumerated in all Scotland, but are "estimated" numbers, deduced from the actual numbers registered in the Eight Principal Towns. There is reason to believe that so low a mortality from Small-pox has not been recorded in this country since these Reports began to be issued. The actual number of Small-pox deaths in the Eight Principal Towns, with a population of 1,241,781 was only 3; and in the selected districts, embracing most of the Large Towns in Scotland, and the more important suburban districts of Glasgow, of which an account is given in our Monthly Reports, not a single Small-pox death was registered. The population of the selected districts is certainly not under 420,285; hence it may be safely stated that out of a population of 1,662,066, there have been only three such deaths in 1878.

In reference to one case only, a death certificate was received from the district of Govan Church, to the following effect:—

"No. 878. Female. 5 months. Vaccination and with much Debility. 7 days. Certified." In reference to this certificate, it was thought right that the certifying medical gentleman should be invited by the Registrar to offer some explanation. The following letter from the Registrar speaks for itself:—

"Govan, 8th October 1878.

"District of Govan Church.

"SIR,

"I have received your letter of 4th inst., and have since seen Dr Pearson, the medical man who certified the cause of death in Entry No. 878 in my Death Register last month. I herewith forward his replies to your queries.

"1st The child in question was in perfect good health before vaccination was performed.

"2d. The operation was performed a week before death.

"3d. Vaccination was good, and as it should be, with beautiful vesicule.

"4th. The operation was performed by a registered Medical Practitioner.

"5th. Debility set in after vaccination, but could not say that vaccination was the direct cause of death.

"I have the honour to be,

"SIR,

"Your obedient Servant,

"THOMAS STEEL, Registrar.

"To the Registrar-General, Edinburgh."

The particulars regarding each of the three deaths from Small-pox that took place in the Principal Towns have already been given in the preceding general Annual Report, and need not be here repeated.

I have the honour to be,

SIR,

Your most obedient Servant,

WILLIAM ROBERTSON, M.D.

STATISTICAL DEPARTMENT,

18th March 1879.

NOTE.—In future Annual Reports the causes of death will be arranged in accordance with the classification which, under the direction of Dr Farr, has now for many years been followed in the Reports of the Registrar-General of England. In only two important points we shall probably deviate slightly from the English nomenclature. We shall retain the term “Relapsing Fever,” which indicates a form of disease with which most practitioners in Scotland were a few years ago very familiar, and which still lingers amongst us. And in regard to the term “Premature Birth” it may be well here to note that it has hitherto in Scotland comprehended all such children as have died at ages under one year from debility proceeding from any undefined cause. While, then, we shall endeavour to conform strictly with the English definition of this cause of death, it must be understood that at first there may be some little difficulty in doing so.

XI.—ABSTRACT of the METEOROLOGY of the Eight Principal Towns of Scotland during the several Months of the Year 1878.

Mean Height above the Sea-level, 111 feet. Mean Latitude, 56° 12'. Mean West Longitude, 3° 30'.

1878.	BAROMETER.		SELF-REGISTERING THERMOMETER.						HYGROMETER.		DEDUCTIONS from Glaisher's Tables, 2d Edit.				RAIN.		WINDS.									
	Mean at 32° and Sea-level.	Monthly Range.	Highest in Month.	Lowest in Month.	Mean Temperature.	Monthly Range.	Mean Daily Range.	Greatest Daily Range.	Dry Bulb, or Mean Temp. of Air.	Wet Bulb, or Temp. of Evaporation.	Dew-point Temperature.	Elastic Force of Vapour.	Wt. of Vapour in Cubic Foot of Air.	Humidity. Sat. 100.	Number of Days it fell.	Amount.	Number of Days it blew in certain Directions.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.
N.B.—An asterisk “*” is prefixed to those Districts which comprise one or more Parishes or parts of Parishes, and the component parts of these Districts will be found at page 77.
A dagger “†” is prefixed to those Districts which consist of only a part of the Parish of the same name.
† Vaccination Return not received.

APPENDIX.

VACCINATIONS, 1877.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

1. SHETLAND.

7. (3.) WHALSAY AND SKERRIES.—The vaccinator was ill during summer, at which season vaccination is performed in Skerries, and this is the cause of the postponements.

3. CAITHNESS.

39. OLRIG.—Requirements of Act well attended to.

4. SUTHERLAND.

53. LAIRG.—Act well attended to, though it is, in many cases, a matter of much difficulty owing to the distances.

II. NORTH-WESTERN DIVISION.

5. ROSS AND CROMARTY.

Mainland.

57. ALNESS.—As a rule parents attend to the vaccination of their children, and the transmission of the medical certificates, though the "Registrar's Notice" has sometimes to be had recourse to.

66. (1.) NORTHERN DISTRICT OF GAIRLOCH.—In some cases vaccination was performed, but the certificates were not sent in.

66. (2.) SOUTHERN DISTRICT OF GAIRLOCH.—Of the two cases unaccounted for, one is the child of a hawker. The child was duly vaccinated, but the parents state they did not know they had to return to the Medical Officer with the child for inspection, and thus the Registrar cannot get Schedule A in the meantime. The other is the child of a parent whom the Registrar has invariably to return as a defaulter.

68. KILLEARNAN.—About one half of the parents fail to transmit the vaccination certificate within the six months required by the Act. The "Notice" is looked upon as a matter of course, and some even require it repeated for which trouble the remuneration is insufficient.

75. (1.) LOCHBROOM.—Considering the broken, isolated nature of the district, and the great distances and difficulties some parents have to overcome to arrive at the stations or abode of the Medical Officer, the Act is wonderfully and praiseworthily attended to. All parties seem to do their best and utmost. The Doctor and Inspector are indefatigable in their efforts to do

their duty; hence, though it is the winter season, very few defaulters are on the list.

6. INVERNESS.

Insular.

111. (1.) HARRIS.—Previous to 1877 there were 276 children unvaccinated, in 1877 there were 107, and in 1878, 39—making altogether 422 unvaccinated in the parish at this date.

114. (2.) RAASAY.—Vaccination better attended to last year, and a number of outstanding cases overtaken; still there are a number of defaulters in the remote end of the district.

III. NORTH-EASTERN DIVISION.

7. NAIRN.

120. ARDCLACH.—The administration of the Act is conducted with the least possible trouble.

123. NAIRN.—Postponements are pretty frequent, and the Registrar believes that many of these have to be made merely because the parents negligently omit to get vaccination performed within the statutory period. If the fee noted in the circular were made payable for the issuing of the circular, it would have the effect of making parents more attentive.

8. ELGIN (OR MORAY)

131. DUFFUS.—With a few exceptional cases, Act well attended to.

9. BANFF.

148. BOTRIPHNY.—The Registrar has little trouble regarding vaccination, but is of opinion that the time allowed should be *four* instead of *six* months.

152. ENZIE.—There is very great difficulty in getting the guardians of children and their medical attendants to conform, in anything like due time, to the requirements of the Act.

10. ABERDEEN.

178. CAIRNEY.—Generally, there is no trouble to the Registrar, parents attending to vaccination readily. In several cases the "Notice" has had to be sent, but this has been owing to some of the medical practitioners telling the parents not to mind "till they hear from the Registrar," but no case has had to be reported to the Parochial Board.

IV. EAST-MIDLAND DIVISION.

12 FORFAR.

282. (4.) ST ANDREW (DUNDEE).—The statutory notice has to be sent to a great number of parents. Most of them blame the medical men for advising them to delay, while they themselves desire their children vaccinated much earlier. The complaint however is true as regards only two or three medical men. Of 1852 children born, only 15 are unaccounted for. In last two returns reference was made to the large number of children "insusceptible of vaccine disease on the ground of previous vaccination." In the present return the number is equally large, the result of one midwife vaccinating, and one medical man signing certificates for her.

288. FORFAR.—Vaccinations for 1877 complete. The certificate of successful vaccination, in an unusually large number of cases, was received by the Registrar after the statutory period of six months had expired. 26 certificates of postponement received. The Registrar is still of opinion that the statutory period should be reduced to three or four months.

V. WEST-MIDLAND DIVISION.

17. STIRLING.

490. STIRLING.—In 65 cases were notices of failure to vaccinate issued, relative to births in 1877, and 66 certificates of postponement were received dated in 1877, of which 6 were for the fifth, 2 for the sixth, and 1 for the seventh time.

19. ARGYLL.

Mainland.

514. INVERCHAOLAIN.—Act carefully attended to, but as there is no medical man resident in the parish, certificates are often a few days behind time in coming in.

526. LOCHGILPHEAD.—When we have a good fishing in this quarter, there is little difficulty with the operation of the Act, but when the opposite is the case, some difficulty occurs on account of parents being unable or unwilling to pay the fee. The medical attendant in almost all cases vaccinates the children, but does not give the certificate without the fee, and consequently when money is scarce the Registrar has to keep dunning and threatening until the vaccinator is paid his two and sixpence.

VI. SOUTH-WESTERN DIVISION.

21. RENTFREW.

560. CATHCART.—A good many of the parents get the certificates, and omit to send them for months,—sometimes they lose them altogether. One clergyman refuses to vaccinate on principle. He has been fined by the Sheriff, but is still stubborn.

568. KILBARCHAN.—Parents have no objection to vaccination, but many are careless and need to be reminded of their duty, some more than once.

22 Ayr.

590. (2.) TROON.—If, instead of six months, only four were allowed for vaccination, and the Medical Officer paid a small fee for granting certificates, the Registrar considers it would be an advantage.

597. KILMARNOCK.—Nothing worthy of remark, except the annoyance given by some of the medical men in detaining the certificates until they receive their fee for vaccination.

23. LANARK.

660. WISTON AND ROBERTON.—Great difficulty in getting the certificates from the vaccinators, and though they come in late, they are often dated as if they had been sent in at the proper time.

VII. SOUTH-EASTERN DIVISION

25. EDINBURGH.

676. COCKPEN.—Pretty often, parents, when applied to for vaccination certificates for their children, state that the doctor has taken them away in order to fill up and forward to the Registrar, thinking thereby that they are relieved of responsibility. Not infrequently the doctor forgets to send them in due time.

26. HADDINGTON.

704. BOLTON.—The Registrar has generally to remind parents, at the expiry of six months, to send in their certificates, and as a rule they comply at once.

716. PENCAITLAND.—Constant attention is required, otherwise vaccination would soon get into arrear, and in this way more trouble is caused than by the registration of births, which is got over at once and done with. The registration of vaccinations is very much underpaid.

29. SELKIRK.

778. SELKIRK.—One case (reported to the Inspector of Poor as a defaulter) was found to have been properly vaccinated, but the vaccinator refused to grant certificate until his fee was paid, and it has not yet been granted.

VIII. SOUTHERN DIVISION.

30. ROXBURGH.

801. MOREBATTLE.—The public are anxious to comply with the regulations of the Act, but medical men sometimes cause inconvenience and misunderstanding by undertaking to parents to send certificates to the Registrar, but forgetting to do so.

31. DUMFRIES.

843. MORTON.—More trouble and annoyance is caused in getting the certificates returned, than by all the other duties of the office. The people are willing to do their duty, but say they cannot get certificates from their medical attendants.

33. WIGTOWN.

893. NEW LUCE.—Act working well. The vaccinator is very attentive, but parents require to be reminded occasionally.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
59b	Carnoch	Parts of Contin, Fodderty, and Urray.
71b	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
86b	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir (2) Rest of Kilmuir and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbrydo.
147	Banff	Banff, and part of Gamrie.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrinnnes	Parts of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
217	Logie-Coldstone & Cromar	Logie-Coldstone, and part of Glenmuick, etc.
222b	Millbrex	Parts of Fyvie and Monquhitter.
227a	New Machar	New Machar, and part of Udney.
227b	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
237b	Savoeh	Parts of Ellon, New Deer, Old Deer, and Tarves.
240	Strathdon	Strathdon, and part of Tarland.
249b	Ythan Wells	Parts of Auchterless and Forgue.
272	Arbroath	Arbroath, and part of St Vigeans
282	Dundee	Dundee, and part of Liff, Benvie, and Invergowrie.
312	Montrose	Montrose, and part of Dun.
324	Aberfeldy	Parts of Dull, Fortingall, Kenmore, Logierait, and Weem.
328b	Ardoch	Parts of Blackford, Dunblane, and Muthill.
331	Balquhiddier	Balquhiddier, and part of Comrie.
333	Blackford	Blackford, and part of Ardoch.
344	Dowally	Part of Dunkeld and Dowally.
348	Dunblane	Dunblane, and part of Ardoch.
349	Dunkeld	Parts of Caputh and of Dunkeld and Dowally
355a	Fortingall	Parts of Fortingall and Weem.
355b	Foss	Part of Dull.
360	Kenmore	Parts of Kenmore and Weem.
361	Killin	Parts of Kenmore, Killin, and Weem.
367	Kinloch-Rannoch	Parts of Fortingall and Logierait.
375	Logiealmond	Parts of Fowlis-Wester, Little Dunkeld, Methven, Monzie, and Redgorton.
379	Meigle	Meigle, and part of Coupar-Angus.
386a	Muthill	Muthill, and part of Ardoch. [Kinloch. and Rattray.
386b	Persie	Parts of Alyth, Bendoehy, Blairgowrie, Caputh, Kirkmichael, Lethendy and
387	Perth	Perth, and parts of Kinnoull, Scone, and Tibbermore.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenandry	Parts of Blair-Athol, Dull, and Moulin.
423	Dunbog	Dunbog, and parts of Abdie and Flisk.
424	Dunfermline	Parts of Dunfermline and Inverkeithing.
432	Inverkeithing	Parts of Inverkeithing and Dunfermline.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
481b	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
490	Stirling	Stirling, and small part of St Ninians.
493	Bonhill	Bonhill, and part of Dumbarton.
496	Dumbarton	Parts of Cardross and Dumbarton.
506	Ballachulish, etc.	Part of Kilmallie.
509	Cumlodden and Minard	Parts of Glassary and Inveraray.
512	Glenorchy	Glenorchy, and part of Inishail.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan	(1) Parts of Kilchrenan, etc., and Inishail.
526	Lochgilphead	Parts of Glassary and South Knapdale.
529	Muckairn	Muckairn, and part of Inishail. [Knapdale.
535	Tarbert	Parts of Kilcalmonell and Kilberry, of Saddell and Skipness, and of South
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
542	Kilfinichen and Kilvickeon	Parts of Kilfinichen and Kilvickeon, and of Torosay.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelve	Part of Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and of Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
556	Lochranza	Parts of Kilbride and of Kilmory.
557	North Bute	North Bute, and part of Rothesay.
559	Abbey	(1) Parts of Abbey and Renfrew (2 and 3) Rest of Abbey.
573	Paisley	High, Middle, and Low Church Parishes.
578	Ayr	Ayr, and parts of Newton-upon-Ayr, and of St Quivox.
595	Irvine	Irvine, and part of Dundonald.
612	St Quivox, etc.	Parts of Newton-upon-Ayr, and St Quivox.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	City of Glasgow, including Gorbals and parts of Barony and Govan
670	Queensferry	Queensferry, and part of Dalmeny.
684	Portobello	Parts of Duddingston and South Leith.
685	Edinburgh	City of Edinburgh, including Canongate and parts of St Cuthberts, Duddingston, Liberton, and South Leith.
690	Kirknewton & East Calder	Kirknewton and East Calder, and part of Kirkliston.
692	Leith	(1) Parts of Cramond, North Leith, and St Cuthberts; (2) Parts of North Leith, St Cuthberts, and South Leith.
698b	Stobhill	Parts of Borthwick, Cockpen, Newbattle, and Temple.
774a	Caddonfoot	Parts of Galashiels, Selkirk, Yarrow, Innerleithen, and Stow.
776b	Ladhope	Part of Melrose.
787b	Edgerston	Parts of Jedburgh, Oxnam, and Southdean.
794	Kirktown	Kirktown, and part of Cavers.
813b	Brydekirk	Parts of Annan, Cummertrees, and Hoddam.
853b	Wanlockhead	Part of Sanquhar.
857b	Bargrennan	Parts of Minnigaff (Kirkcudbright) and of Penninghame (Wigtown)
862	Corsockbridge	Parts of Balmaclellan, Kirkpatrick-Durham, and Parton.
864	Dalbeattie	Part of Urr.
899	Stranraer	Stranraer, and parts of Inch and Leswalt.

Ayton, . . . 727				

* The actual number of Districts is 1033—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

REPORT.

TO THE

RIGHT HON^{BLE}. R. ASSHETON CROSS, M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 18th March 1880.

SIR, -

In accordance with the requirements of the Scottish Registration Act (17 & 18 Vic. cap. 80), I have now the honour to submit to you a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1879, which has been drawn up in the usual form, with a view to its being laid before Parliament.

I have likewise the honour to submit to you, in accordance with Section 19 of the Vaccination Act (26 & 27 Vic. cap. 108), the Fifteenth Annual Report on Vaccination, embracing the usual details relative to children whose Births were registered in Scotland during the year 1878. That the vaccination laws in this country are administered with due efficiency may perhaps be

inferred from the circumstance that during the year 1879 only four Deaths from Small-pox were recorded in the Registers of the Eight Principal Towns of Scotland.

I have the honour to be,

SIR,

Your most obedient Servant,

W. PITT DUNDAS,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL.

BY WILLIAM ROBERTSON, M.D., F.R.S.E.

SIR,

THE following Report embraces the usual particulars relative to the Births, Deaths, and Marriages registered during the year 1879 in the 1033 Registration Districts of Scotland. Appended to the general Annual Report is the Fifteenth Report on Vaccination, in which will be found all available information regarding the administration of the Scottish Vaccination Act, and especially with reference to its application to the vaccination of children born in Scotland during 1878.

The population of all Scotland, estimated to the middle of 1879, was 3,627,453. If it be assumed that the annual rates of increase of males and females, deduced from the census enumerations of 1861 and 1871, have since the latter date undergone no change, the number of males in 1879 was 1,741,314, and that of females 1,886,139. During the year 1879 there were registered 125736 Births, 73329 Deaths, and 23462 Marriages. From these figures, and from similar data for recent years contained in Tables I. and II., it appears that the birth-rate in 1879 was slightly below the average rate of the ten immediately preceding years; that the death-rate was far below the average; and that the marriage-rate

TABLE I.—Population estimated to the middle of each year, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1879, and their Proportion to the Population; also the Excess of Births over Deaths, the Number of Illegitimate Births, and their Proportion to the Total Births.

YEAR.	Estimated Population.	BIRTHS.		DEATHS.	MAR-RIAGES.	Excess of Births over Deaths.	Percentage to Population.			Per cent. of Illeg. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.

rate of 3·47 per cent., or of 347 for every ten thousand of estimated population. The number and proportion of births in each of the five new registration groups of districts are stated in Tables IV. and V. In the Eight Principal Towns the registered births were 43527; in the Large Towns, 15950; in the Small Towns, 30098; in the Mainland-Rural Districts, 32884; and in the Insular-Rural Group, 3277. On comparing these figures with those recorded in the general Annual Report for 1878, it may be found that Births have in 1879 occurred in diminished numbers in all the registration groups, except in the Small Towns, in which alone the numbers of 1878 were exceeded. The birth-rate of the Large Towns amounted to 4·30 per cent., and as usual considerably exceeded that of the other registration groups. The birth-rate of the Small Towns, 3·70 per cent., was a trifle higher than that recorded in 1878; that of the Principal Towns was 3·44 per cent.; that of the Mainland-Rural District, 3·14 per cent.; and that of the Insular-Rural, 2·56 per cent.

Of the registered Births, 10638 were illegitimate, constituting a proportion of 8·46 per cent. In the Insular-Rural Districts the percentage of illegitimate Births was 6·07; in the Large Towns, 6·75; in the Small Towns, 7·87; in the Principal Towns, 8·46; and in the Mainland-Rural Group, 10·07 per cent.

The relative frequency of illegitimacy in the various geographical divisions and counties of Scotland is fully illustrated by Table VI. The North-Eastern and Southern Divisions furnish, as usual, a very high proportion of illegitimate births; while in the West-Midland and North-Western Divisions the occurrence of such births is comparatively rare.

In the county of Shetland the percentage of illegitimacy was only 3·6; in Orkney, Ross and Cromarty, Dumbarton, and Bute, it did not exceed 6 per cent.; in twenty-eight counties it varied between 6·1 and 17·4 per cent. In Morayshire the proportion was 13·0; in Dumfries, 13·5; in Aberdeen, 13·7; in Kirkcudbright, 13·9; in Kincardine, 14·1; in Wigtown, 14·9; and in Banff, 17·4 per cent.

Of the 125736 live births registered in 1879, 64436 were males and 61300 females. For every hundred girls there were consequently 105·1 boys born. In the Insular-Rural Districts, in which the preponderance

registrations were only 314. It should, however, be noted that, as has been stated in some of the recent Scottish Quarterly Reports, an average period of 15·432 days elapses between the occurrence of a birth and the completion of its registration.

DEATHS.

There were 73329 Deaths registered in 1879, being in the proportion of 202 for every ten thousand of estimated population. This death-rate is well within the average of the last ten years, and is, in fact, the lowest rate recorded in Table I., which contains returns relative to the last twenty-five years.

The average number of Deaths registered was in February 260 per diem; but only 156 per diem in August. Deaths are in Scotland registered far more promptly than Births; being on an average recorded within $1\frac{1}{2}$ days of their occurrence.

The mortality in the Large Towns amounted to 254 for ten thousand of estimated population, and although considerably less than that recorded in the general Annual Report for 1878, was decidedly higher than that of any other of the new registration groups. In the Principal Towns the rate was 214 per ten thousand, being decidedly less than that of the preceding year; in the Small Towns, 204; in the Midland-Rural Districts, 172; and in the Insular-Rural, 169. On referring to the records for 1878, it may be seen that in every case the death-rates for 1879 have been less than those of the former year, the difference observed in the Mainland-Rural Group having, however, been quite insignificant.

MARRIAGES.

23462 Marriages were registered in Scotland during the year 1879, being at the rate of nearly 65 for every ten thousand of estimated population. This is the lowest marriage-rate recorded in Scotland during the twenty-five years embraced in this series of Reports. Of course, it becomes natural to seek an explanation of this reduced marriage-rate by connecting it with the period of dull trade and financial disaster that has recently prevailed throughout the land.

On examining Table V. one may see that in the Principal Towns and Large Towns alike the marriage-rate has been 75 for every ten thousand of estimated population, a proportion far lower than that recorded in 1878; in the Small Towns the rate was 62 per ten thousand of population; in the Midland-Rural Districts, 53; and in the Insular-Rural Group, 45 per ten thousand inhabitants. In none of the groups did the average marriage-rate of the year under review reach the amount recorded for the preceding year, and it appears that upon the whole the urban districts exhibited this deficiency of marriage-rate in a more marked degree than the rural groups of districts.

The average daily numbers of marriages registered in January was 97; in February, 48; in March, 48; in April, 49; in May, 37; in June, 114; in July, 72; in August, 45; in September, 48; in October, 46; in November, 73; in December, 94; and on an average throughout the year, 64 per diem. In March and in December only was the low marriage-rate of 1878 surpassed by the far lower rate experienced in 1879.

The reader will do well to bear in mind that an average interval of three days elapses in Scotland between the celebration and the registration of a marriage. It should likewise be noted that, in stating marriage-rates,

the number of marriages or of married couples is in these Reports contrasted with the population. In some other countries the number of *persons* married is contrasted with the population, in order to deduce the marriage-rate. This practice is that followed in the Reports of the Registrar-General in England. In Table VI.B. there is given a very full

account of the different processes by which marriages have been, in 1879, entered into in Scotland, in its several statistical groups of registration districts, in its great geographical divisions, and in each of its thirty-three counties. This account is not meant to supersede the detailed statement of the modes in which marriages have been *celebrated* by the ministers of the various religious denominations. Such a statement is, as usual, reserved for the Detailed Report relative to the year 1879.

All that is at present attempted is to show, by reliable figures, how far the new arrangements, provided by statute for the first time in 1879, have been used by persons about to be united in wedlock. Any one specially interested in this subject can, with the aid of Table VIB., calculate for his own satisfaction the percentage of total marriages, whether regular or irregular, that in 1879 in Scotland followed—1st, Banns proclaimed in the Established Church of Scotland; 2d, Publication of purpose of marriage on the boards exhibited by the registrars at their offices; 3d, The mixed process of proclaimed banns and publication of purpose at the registrars' offices; 4th, Sheriff's warrant (which appears to be by far the most frequent process for effecting irregular marriages); 5th, Conviction before a Justice of the Peace or other Magistrate; 6th, Decree of declarator (of which there was no example in 1879).

No comments are here offered on the results to be deduced from an examination of Table VIB. It seems, in fact, to be self-explanatory.

In the next Table, numbered VIC. will be found information relative to the marriages registered in each of the Eight Principal Towns. The form of the Table is precisely similar to that adopted in Table VIB. Of the regular marriages celebrated in Glasgow, 58·9 per cent. followed the usual proclamation of banns; 40·3 per cent. followed publication of purpose at the registrar's office, and 0·8 per cent. followed the mixed process of banns and publications above alluded to. In Edinburgh the numbers regularly married after proclamation of banns amounted to 72·3 per cent.; after publication, to 25·9 per cent.; after proclamation and publication, to 1·8 per cent. In Dundee, 65·4 per cent. of regular marriages followed banns; 32·5 per cent. were preceded by publication; and 2·1 per cent. by both processes. In Aberdeen, 73·2 per cent. of such marriages followed banns; 24·8 per cent. followed publica-

TABLE VIC.—Number of Marriages registered in the Eight Principal Towns of Scotland during the Year ending 31st December 1879.

PRINCIPAL TOWNS.	REGULAR.				IRREGULAR.				TOTAL MAR- RIAGES.
	After Banns.	After Publica- tion.	After Banns and Publica- tion.	Total Regular Mar- riages.	On Sheriff's War- rant.	On Con- viction before J.P. or other Magis- trate.	Estab- lished by De- cree of Declara- tor.	Total Irre- gular Mar- riages.	
Glasgow	2391	1637	33	4061	129	0	0	129	4190
Edinburgh	1376	494	34	1904	74	5	0	79	1983
Dundee	609	303	19	931	52	0	0	52	983
Aberdeen	565	192	15	772	17	0	0	17	789
Greenock	262	211	8	481	15	0	0	15	496
Paisley	256	115	2	373	3	0	0	3	376
Leith	340	116	4	460	15	0	0	15	475
Perth	186	28	1	215	1	0	0	1	216

tion; about 2 per cent. were preceded by the mixed form of banns and publication. In Greenock, the proportions were, 54·5 per cent. after banns; 45·3 per cent. after publication; 0·2 per cent. after mixed process. In Paisley, 68·6 per cent. followed banns; 30·8 per cent. were after publication; 0·6 per cent. succeeded the mixed process. In Leith, the proportion after banns was 73·9 per cent.; 25·2 per cent. after publication; and 0·9 after both. In Perth, 86·5 per cent. followed banns; 13 per cent. followed publication; and 0·5 per cent. were preceded by both processes. Hence it appears that the facilities for intimating purpose of marriage now afforded by the boards exposed at the registrar's offices have been taken advantage of more extensively in Greenock and in Glasgow than in any other of the Eight Principal Towns.

EIGHT PRINCIPAL TOWNS OF SCOTLAND.

The remaining sections of this Report are founded, almost exclusively, upon the events recorded in the registers of the Eight Principal Towns. A similar analysis of the material furnished by the registers of the whole country cannot, under existing arrangements, be made for some time, and must be reserved for the Detailed Annual Report for 1879. Very nearly 35 per cent. of the total inhabitants of Scotland belong to its Eight Principal Towns. They are situated pretty widely apart, and some of them are sure to participate in any influence brought about by peculiarities of climate on the East or West Coast. Their inhabitants are engaged in various industrial pursuits, and, were it not for the circumstances that in certain districts they are very densely aggregated, would constitute no unfair specimen of the average population of Scotland. From long experience it is proved that the condition of each town as evinced by its birth, marriage, and death-rates, is a tolerably accurate indication of the condition of its neighbouring districts. And in particular it seldom occurs that any Zymotic disease prevails extensively in any part of the country without at the same time affecting the death-rate of at least one of the nearest Principal Towns. The Registrar-General consequently has always endeavoured to give the fullest and most prompt information in these Annual Reports regarding the events registered in the Eight Principal Towns; and by the recent attempts that have been made to improve the form of the Quarterly, Monthly, and Weekly Reports, he has striven to furnish such information as local and sanitary authorities have a right to expect from this Department.

BIRTHS IN THE EIGHT PRINCIPAL TOWNS.

43527 Births were, during 1879, registered in the Eight Principal Towns of Scotland. For every ten thousand of estimated population there were, consequently, 344 Births. This rate is considerably below that recorded in 1878, which was 357 per ten thousand. The highest birth-rate was that of Leith,—the lowest that of Perth. For every ten thousand inhabitants there were 319 births in Perth, 328 in Edinburgh, 334 in Greenock, 338 in Dundee, 340 in Glasgow, 351 in Aberdeen, 411 in Paisley, and 412 in Leith. In Aberdeen, Paisley, and Dundee the birth-rate slightly exceeded that of 1878; in Edinburgh, and still more in Glasgow the rate of 1879 was in defect.

Of the 43527 Births in the Eight Principal Towns, 3683, or 8·46 per cent., were illegitimate. Of the total births, there were 4·8 per cent. illegitimate in Greenock, 6·5 per cent. in Leith, 7·7 per cent. in Paisley, 8·2 per cent. in Glasgow and in Edinburgh, 10·9 per cent. in Aberdeen, and 11·2 per cent. in Dundee. If, however, the relative numbers of such births among possible mothers be considered, it appears that the towns rank in the following order:—Greenock, with 1·51 per cent. of illegitimacy; Edinburgh, with 1·58; Perth, with 1·88; Glasgow, with 2·08; Paisley, with 2·12; Dundee, with 2·18; Leith, with 2·44; and Aberdeen, with 2·61 per cent.

Of the 43527 Births registered in the Eight Principal Towns, 22117 were males, and 21410 females. The number of boys was consequently 103·3 for every 100 girls,—a proportion considerably lower than that which we have had occasion to record for the population of all Scotland.

DEATHS IN THE EIGHT TOWNS.

There were registered during 1879, in the Eight Principal Towns of Scotland, 27132 Deaths. The death-rate per ten thousand of estimated population was, consequently, 214—the lowest death-rate observed in the Eight Towns during the last twenty-five years, and considerably lower than the rate recorded for 1877, which was 232 per ten thousand.

In Table IX. is presented the annual percentage of deaths to the population of each of the Eight Towns during 1879, during each of the ten preceding years, and during the mean of the decennium. It appears that during 1879, there died out of every ten thousand inhabitants of

1874	1,136,154	42,631	3·75	32,124	2·83	10,574	0·93
1875	1,171,228	43,621	3·72	30,983	2·64	10,670	0·91
1876	1,194,357	44,265	3·70	27,977	2·34	10,722	0·90
1877	1,217,943	44,538	3·66	28,220	2·32	10,713	0·88
1878	1,241,935	44,297	3·57	29,410	2·37	9,728	0·78
1879	1,266,327	43,527	3·44	27,132	2·14	9,469	0·75

The numbers for 1877, 1878, and 1879 are made up from the Quarterly Returns; the remainder from the Detailed Annual Reports, where the figures are corrected.

Edinburgh, 196 ; of Leith, 203 ; of Greenock, 208 ; of Aberdeen, 209 ; of Dundee, 211 ; of Glasgow, 216 ; of Perth, 247 ; and of Paisley, 306. In the case of six of these towns the death-rate was lower than the mean rate of the preceding decennium ; in Paisley and in Perth there was a slight increase upon the mean rate. There is, however, excellent reason for believing that the estimate which is used in these Reports, very much overstates the existing population of Glasgow, and understates that of Paisley. The estimate employed in the Registrar-General's Reports is founded upon the census enumeration of 1871, and on the assumption that the average rate of increase that took place in each town during the preceding decennium has since continued without variation. From the results of the enumeration of inhabited houses that have recently been made in Paisley and in Glasgow, and from other circumstances which it is unnecessary here to specify, it is tolerably plain that since 1871 there have been considerable fluctuations in the rate at which these towns have been growing ; but till the approaching census is completed it will not be in our power to alter our estimate. Meanwhile the reader is

TABLE VIII.—Births, Deaths, and Marriages, and their Proportion to the Population, during the Year 1879, in each of the Principal Towns of Scotland ; Estimated Number of Unmarried Women and Widows between 15 and 45 years of age ; also the Illegitimate Births, and their Proportion to the Total Births, and to the Number of possible Mothers.

under five years of age was especially heavy in Paisley, where it amounted to 8·56 per cent. of the population, but comparatively light in Aberdeen, where the deaths were only at the rate of 5·17 per cent. Of every hundred deaths that took place in Leith, 44·8 occurred in children of these tender years; in Perth there were only 33·6 per cent. of such deaths. On comparing Table X. with similar statements made during recent years, it becomes obvious that the amount of infant mortality experienced in 1879 was more moderate than usual in the Principal Towns.

Tables XI. and XII. contain a view of the mortality due to each class of disease and to each principal cause of death, in each of the Eight Principal Towns. The nomenclature used in these tables is that introduced by Dr Farr into the Reports of the Registrar-General for England. It differs in a few particulars from the classification hitherto in use in the Scottish Reports; but it is obviously expedient that there should be, so far as practicable, uniformity in such matters in the three kingdoms. And it is due to Dr Farr to state that we have found no serious difficulty in adopting his nomenclature and in applying it to the returns made by the Registrars in Scotland.

From the class of Miasmatic Diseases (under which are included the

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the year 1879, allowing for the Causes of Death not specified.

DISEASES CAUSING DEATH.	Total Eight Towns.	Glasgow.	Edinburgh.	Dundee.	Aberdeen.	Greenock.	Paisley.	Leith.	Perth.
I. Miasmatic Diseases (including Rheum.) .	14·29	14·25	13·30	13·78	13·37	13·11	17·61	17·32	17·23
III. Tubercular Diseases .	18·30	20·15	16·34	16·51	14·99	20·05	19·76	15·67	12·92

diseases familiarly known as Zymotic, and likewise Rheumatism), there died only 0·306 per cent. of the population of the Eight Towns—a very moderate mortality indeed, representing only 14·29 per cent. of the total deaths from all causes. Miasmatic Diseases proved fatal to 0·568 of the population of Paisley; to 0·425 of that of Perth; to 0·366 in Leith; to 0·312 in Aberdeen; to 0·308 in Glasgow; to 0·299 in Greenock; to 0·290 in Dundee; and to 0·261 in Edinburgh. The percentage of total deaths due to these causes was 17·61 in Paisley; 17·32 in Leith; 17·23 in Perth; 14·25 in Glasgow; 13·78 in Dundee; 13·37 in Aberdeen; 13·30 in Edinburgh; and 13·11 in Greenock.

In Glasgow, of every hundred deaths, 4·16 were attributed to Hooping-cough; 2·02 to Scarlatina; 1·31 to Measles; 1·64 to Fevers, whereof 1·09 were of the Enteric type; 1·66 to Diarrhoea and Dysentery combined.

In Edinburgh the percentage of deaths from Hooping-cough was 3·36; from Diarrhoea and Dysentery combined 2·50; from Scarlatina 2·00; from Fevers 1·91, including 1·20 from Typhoid Fever; from other miasmatics so low as hardly to require notice in this report.

In Dundee the percentage of Deaths from Hooping-cough was 5·84; that of deaths from Diarrhoea and Dysentery, 4·33; from Fever, 1·23, including deaths from Typhus and Typhoid in equal proportions; from Scarlatina, 0·89; from other miasmatics, inconsiderable in number.

In Aberdeen there were in each hundred deaths 2·81 due to Hooping-cough; 2·14 to Measles; 2·14 to Diarrhoea and Dysentery; 1·62 to Diphtheria; 1·29 to Fever, whereof 1·00 were cases of Enteric or Typhoid Fever; 1·05 to Scarlatina.

In Greenock the percentage of deaths from Hooping-cough was 4·14; from Fevers 1·91, including 1·08 from Typhus; 1·59 from Diphtheria and from Diarrhoea; 1·34 from Croup; and 1·08 from Measles.

In Paisley 3·83 per cent. of the total deaths were due to Scarlatina; 3·36 per cent. to Measles; 2·62 to Hooping-cough; 2·49 to Bowel Complaints; 2·36 to Fevers, whereof 1·28 were Enteric Fevers; 1·08 per cent. of the total deaths were due to Croup, and 0·94 to Diphtheria.

In Leith the percentage of deaths due to Hooping-cough was 4·96; to Diarrhoea, Dysentery, and Cholera, 3·22; to Fevers, chiefly of the Enteric Type, 2·44; to Croup, 2·35; to Scarlatina, 1·48; and to Diphtheria, 1·31.

In Perth the percentage of deaths were from Hooping-cough, 8·00; from Bowel Complaints, 2·92; from Measles, 2·15; from Croup, 1·23; from Fevers, mostly Enteric, 1·07.

In the entire group of Principal Towns there occurred 1116 deaths from Hooping-cough, being 4·16 per cent. of all registered deaths, and 8·9 deaths for every ten thousand of estimated population. Diarrhoea caused 547 deaths, being 2·04 per cent. of all deaths registered, and 4·4 deaths for every ten thousand of population. The deaths from Measles, 311, represent 1·16 per cent. of all deaths registered, and 2·5 deaths per ten thousand of population. The 468 deaths attributed to Scarlatina were 1·74 of all deaths registered, and 3·7 per ten thousand of estimated population. The deaths from Fevers were 452, constituting 1·68 per cent. of the mortality from all causes, and 3·42 deaths per ten thousand of population. The relative frequency of Typhus and Enteric Fever was very nearly as 10 to 19. In Greenock only was Typhus the more frequent cause of death. In Dundee there was no difference between the frequency of deaths from Typhus and from Enteric Fever. The only two deaths from Relapsing Fever were registered in Aberdeen and in Paisley.

The deaths from Croup, 273, constituted 1·02 per cent. of the gross mortality; those from Diphtheria, 269, were equivalent to 1·00 per cent. Syphilis caused 122 deaths; Rheumatism, 100; Erysipelas, 90; Metria, 54; Dysentery, 37; and Cholera, 33.

Only 4 deaths were attributed to Small-pox, and all of these occurred in the city of Edinburgh.

Inquiry was made regarding Vaccination in each, and it was ascertained:

That the first death occurred in the case of a woman, aged 44 years, who had probably been vaccinated, as the certificate of death assigns as the cause "Modified Small-pox and Bronchitis."

That the second death occurred in a male, aged 51, who died of Confluent Small-pox, and who had been vaccinated.

That the third death occurred in a male, aged nine years, whose vaccination was certified to have been "imperfect."

That the fourth death was that of an unvaccinated male child of two months old.

The deaths attributed to Cancer were 539, and appear to have been most frequent in Perth, Aberdeen, and Edinburgh; least common in Glasgow. To "Dropsy," 175 deaths were ascribed; and it is satisfactory to observe that this vague term is annually becoming less frequent in the returns of the causes of death made to the Registrars in the Eight Principal Towns.

Tubercular diseases caused 4909 deaths, being 39·2 per ten thousand of population, and 18·30 per cent. of the gross mortality from all causes. To Pulmonary Consumption alone 3380 deaths were ascribed, being 27 per ten thousand of the population, and 12·60 per cent. of the gross mortality. Paisley and Glasgow suffered more considerably than the other towns from Consumption; Leith, as usual, had far fewer deaths from this cause. The deaths from Hydrocephalus numbered 811; those from Tabes, 453; and those from Scrofula, 265.

The deaths from Diseases of the Nervous System were 2818, being 10·51 per cent. of the gross mortality, and 22·5 deaths for every ten thousand of estimated population. The percentage of deaths from diseases of this class was 12·46 in Perth, 12·37 in Aberdeen, 11·39 in Greenock, 11·34 in Edinburgh, 10·88 in Leith, 10·38 in Dundee, 9·95 in Paisley, and 9·73 in Glasgow. The deaths for every ten thousand of estimated population were 30·8 in Perth, 30·4 in Paisley, 25·9 in Aberdeen, 23·7 in Greenock, 22·2 in Edinburgh, 22·1 in Leith, 21·9 in Dundee, and 21·0 in Glasgow.

Diseases of the Organs of Circulation caused 1600 deaths, being 5·96 per cent. of the deaths from all causes, and 12·8 deaths for every ten thousand of population. We once more find that the mortality in Perth from diseases of this class seems exceptionally high, being very nearly double of that which Table XI. records for Leith and for Glasgow. It is not possible to offer at present a satisfactory explanation of this circumstance; but we may venture to point out that there is a very common class of cases in which the death certificates do not clearly specify whether disease of the *lungs* or disease of the *heart* has been the actual cause of death. In very many instances it is, in fact, impossible to determine this, and in accordance with the form of the certificate and the habit of those that frame it, the cause of death is apt to be recorded in an arbitrary or hap-hazard sort of way.

From Diseases of the Organs of Respiration there were 6419 deaths, being 23·93 per cent. of the gross mortality, and 51·3 deaths for every ten thousand of the estimated population. The death-rate in a like number of inhabitants was 58·2 in Paisley, 56·2 in Glasgow, 52·7 in Dundee, 49·4 in Perth, 46·3 in Leith, 45·5 in Aberdeen, 45·3 in Greenock, and 42·4 in Edinburgh. The proportion of all deaths due to diseases of the Respiratory Organs was 26·02 per cent. in Glasgow, 25·02 in Dundee, 22·80 in Leith, 21·83 in Greenock, 21·74 in Aberdeen, 21·62 in Edinburgh, 20·0 in Perth, and 19·02 in Paisley. It appears that this class of diseases was fully as destructive during 1879 as during the preceding year.

Bronchitis alone caused 4348 deaths; Pneumonia, 1611; Pleurisy, 96; Asthma, 74; Laryngitis and Lung Diseases of unspecified nature, 290.

Diseases of the Organs of Digestion caused 1387 deaths, or 5·17 per cent. of the gross mortality. This is equivalent to 11·1 deaths out of every ten thousand inhabitants of the Eight Towns. It must be carefully noted that according to the classification of diseases used for the first time in this Report, Teething is not included as one of the Diseases of the Organs of Digestion, but is relegated to the class of Developmental Diseases.

From Diseases of the Urinary Organs there were 515 deaths, being 1·92 per cent. of the deaths from all causes; and 4·1 deaths to every ten thousand inhabitants of the Eight Towns.

To Premature Birth 703 deaths were ascribed; to Teething, 295; to Cyanosis, Spina Bifida, and other Malformations, 102.

There were 43 deaths from Diseases of the Uterus or Ovaries; 162 (exclusive of the deaths by Metria) from Childbirth.

From Atrophy and Debility there were 906 deaths. This number may appear large when contrasted with the 194 deaths ascribed to Atrophy in 1878; but it must be borne in mind that in accordance with the classification which is *now* used in these Reports, a certain number of deaths that would formerly have been referred to the Debility of Infancy and Premature Birth, are now grouped under Atrophy and Debility.

There were 805 Violent Deaths, which consequently appear to have constituted 3 per cent. of the gross mortality, and to have removed 6·4 per cent. of the estimated population of the Principal Towns. It must be remarked that deaths due to Intemperance are no longer registered as Violent Deaths, but under the third Order of Class I.; and that of such deaths (including 18 due to Delirium Tremens) there were, in 1879, no less than 88.

Of the Violent Deaths, 42 were registered as suicidal; but, as coroners' inquests are not held in Scotland, it is but reasonable to doubt whether the number of suicides can be regarded as correct.

Of 71 persons who died during 1879 in the Eight Principal Towns of Scotland at ages exceeding 90 years, 16 were males, and 55 females. The widow of a printfield labourer is stated to have attained the age of 104 years.

MARRIAGES IN THE EIGHT TOWNS.

There were 9469 Marriages registered during 1879 in the Eight Principal Towns of Scotland. The estimated population of these towns being 1266521, it appears that for every ten thousand inhabitants there

were 75 Marriages—a rate which, as we have elsewhere remarked, is far below that recorded during recent years in our Eight Principal Towns. On referring to the Tables marked VIII. in the present Report and in that for 1878, it may at once be seen that the diminution in the marriage-rates of Glasgow, Edinburgh, and Paisley has been of the most marked character during 1879; that the rate in Leith has remained as in 1878; but that in Dundee, Aberdeen, Greenock, and Perth marriages have been fully more frequent during the latter year.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

While examining the following brief account of the weather that prevailed during the successive months of 1879, the reader should bear in mind that December of 1878 had been very inclement, showing a mean temperature of 31°·4, or no less than eight degrees below the average of previous Decembers. The deaths registered daily throughout Scotland were, according to our Quarterly Reports, 258 in December. Thus severe winter weather was in progress when the year 1879 commenced.

January 1879 was chiefly remarkable for an unprecedentedly low mean temperature—lower, in fact, than that of any month on record since 1856. This cold, coming as it did in continuation of the almost equally extreme cold of December 1878, produced an unexampled period of frost of eight weeks' duration. The air was dry, and the rainfall, only one-third of the average, smaller than in any previous January. The daily deaths were 250.

February was characterised by the low mean temperature, 4° less than the average for the same month of former years, yet happily 3°·7 higher than that of January 1879. The rainfall was scanty, and the strength of the wind slight, but its direction was more than usually from the east. The average daily number of registered deaths was 260.

March was cold, wet, and windy. Although the mean temperature was 2°·5 below the average, this depression was less than that experienced

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1879, compared with the Mean of the Ten Years 1855–1864.

MONTHS.	YEAR 1879.				1855-1864.	
	Mean Temperature.	Actual Deaths.	Deaths when Months are equalised to 31 days.	Proportion to 12,000 per annum or 1000 per month.	Monthly Proportion of Deaths.	Mean Temperature.
January . . .	31°·0	7,752	7,752	1,243	1,134	37°·2
February . . .	34°·0	7,274	8,053	1,291	1,193	37°·4
March	37°·5	6,924	6,924	1,110	1,145	39°·8
April	41°·0	6,613	6,833	1,096	1,083	44°·1
May	46°·2	6,539	6,539	1,048	1,010	49°·5
June	53°·2	5,632	5,820	993	956	55°·6
July	54°·8	5,436	5,436	872	895	57°·6
August	56°·0	4,845	4,845	777	856	57°·3
September . .	51°·5	4,834	4,995	801	843	52°·8
October	46°·0	6,042	5,042	808	858	47°·2
November . . .	40°·5	4,962	5,127	822	954	40°·2
December . . .	34°·7	7,476	7,476	1,199	1,073	38°·6
Year	43°·9	73,329	74,842	12,000	12,000	46°·7

in either of the two immediately preceding months. The direction of the wind was equally divided between east and west, with a slight inclination to the south. The daily deaths were 223.

April was characterised by unprecedentedly low mean temperature, no less than 4° below the average of previous years; and this was accompanied with a generally low barometric pressure, and by wind not very violent, but almost invariably from the east. The rainfall, rather abundant in the east, was very scanty in the west, and was of about average amount in the country at large. There were 220 daily deaths during the month.

May had a low mean temperature (not, however, quite so low as that of May 1877), accompanied with little wind, more northerly in direction than is usual. There was a fair, if not an abundant rainfall. The daily deaths had sunk to 211.

June was remarkable for low barometric pressure, low mean temperature, large humidity, large rainfall (almost double the average), and wind preponderating for direction in an unusual degree to the east and south-east. The daily registered deaths were 188.

July was remarkable for a small barometric pressure, a very low mean temperature, and large amount of rain. The greatest rainfall was at Edinburgh, where it amounted to the very unusual quantity of 7·56 inches. The daily deaths were 175.

TABLE XIV.—Meteorology of Scotland for 1879, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1879.

In *August*, after the long depression of temperature which had existed for seven months, the weather had nearly recovered its normal conditions. The humidity, rainfall, and strength of wind were, however, all slightly greater than usual. The prevailing winds were easterly. The average temperature about 1° below the average of former years. The daily deaths were only 156, being the minimum for the year.

September had a slightly lower temperature than usual. The other meteorological circumstances were either normal, or rather more favourable than normal. The direction of the prevailing winds was from the west. Rather less rain, and more calm weather than usual. The daily deaths were 161.

October had a rather low mean temperature ($1^{\circ}3$ below the average), but the barometer in general stood high; there was little rain and little wind, the prevailing currents being from WNW. The daily deaths were 163.

In *November*, for the first time for twelve consecutive months, the mean temperature of all the eight towns together was observed to be slightly *above* the mean of former years. The rainfall, scanty on the whole, had its maximum in the eastern towns, Aberdeen and Edinburgh. The average direction of the wind was from WNW. The daily deaths were 165.

December was on the whole, cold, dry, with little wind and a high barometric pressure; the early part of the month indeed, was exceedingly cold, and at Edinburgh the minimum thermometer one day marked $7^{\circ}5$, being $24^{\circ}5$ below freezing; but towards the end of the month the weather became remarkably windy. The prevailing wind was WSW. The daily deaths were 241.

By means of Table XIII. a comparison may be instituted between

the different months of 1879 and the corresponding months of the decennial period 1855–64, as regards the temperature, and the proportion of the gross annual mortality experienced in each. The period 1855–64 is that which in the course of these Reports we have been accustomed to consider as the standard period, to which the observations of succeeding years are conveniently referred, when it is desired to study their conformity with, or deviation from the results of general experience. It is made very obvious by the table that during 1879, every month except November had a mean temperature lower than that of the corresponding month of the average period,—that the proportion of the gross mortality contributed by the coldest months—January, February, and December—was as usual most considerable, and that the monthly mortality was at its minimum in August. In average years the coldest month is January; the maximum mortality is observed in February and in March; the mortality of December is a trifle lower than that of April; and the healthiest month of the whole year is September.

By means of Table XV., the daily deaths in each month in the Eight Principal Towns may be traced in connection with the most marked meteorological phenomena of the year. The deaths were at a maximum in January; gradually became less and less numerous, month after month, till August, when their number was at a minimum; then very slowly increased in number till December, when the sudden advent of cold winter weather seemed to cause the mortality to become as considerable as it had been in February.

The deaths from Small-pox were only four in number, a single case occurring in each of the four months, January, May, June, and December.

Measles proved most fatal in May, but deaths from this cause were

likewise rather frequent in April and in June. During the latter half of the year the virulence of Measles seems to have rapidly abated, and in November the deaths from this cause were at a minimum.

Deaths from Scarlatina were most frequent in October and November; scarcely less so in December. In April and in May they were at a minimum, and upon the whole it may be said that the disease was at no time very destructive during 1879.

Deaths from Diphtheria and from Croup were most frequent in the coldest months, January and December.

Hooping-cough was the ruling epidemic at the commencement of the year; its victims were most numerous in February and in March. After April its frequency became rapidly diminished, but during the last three months of the year deaths from this disease again manifested a tendency to increase in number.

The deaths from Fevers were in unusually moderate proportion, their frequency being most considerable in December and January—least considerable in April and in August.

Diarrhœa is in this country one of the few epidemic disorders that is apt to be much favoured by the prevalence of hot weather. Of course, during 1879, no such fostering influence was to be met with in the climate of Scotland, and the deaths from Diarrhœa were consequently few. They were most frequent in September; least common in March and in December.

It may be well to note here that there were 2 deaths from Hydrophobia registered in the Principal Towns during 1879. Both were well ascertained to have been real cases of this fortunately rare disease. One occurred in Edinburgh in January; the other in Glasgow in November. The former case was a male, the other a female.

Deaths from Consumption were most frequent in May, March, and April, least frequent in November.

Diseases of the Organs of Respiration are, more than any others, apt to be influenced by extremes or vicissitudes of temperature. During 1879 this was well illustrated in the Eight Principal Towns. The deaths due to these chest complaints were unusually numerous in January—a cold month following an equally inclement December. They abated in

TABLE XVII.—Monthly Deaths at Four Periods of Life in the Eight Principal Towns of Scotland during the Year 1879, and Proportion at each Age in every Hundred Deaths per Month.

November	757	192	539	345	1,833	41·3	10·5	29·4	18·8	100
December	1,191	254	818	634	2,897	41·1	8·8	28·2	21·9	100
YEAR	10,728	2,825	8,265	5,320	27,138	39·5	10·4	30·5	19·6	100

frequency as the seasons advanced, attaining their minimum in August, the warmest month of the year. In November they again manifested a tendency to increase in frequency, and in December were about as numerous as they had been in January. The mean temperature of the whole year, $43^{\circ}9$, was about three degrees below the average of former years; and, except in November, the mean temperature of every month was below the average temperature of the corresponding month of the standard decennium. Hence it was only naturally to be expected that the deaths from diseases of the respiratory system should be more numerous than usual.

By means of the statements given in Tables XVII. and XVIII. the reader has it in his power to ascertain the relative monthly mortality experienced in the Eight Principal Towns, among the inhabitants divided according to age into four classes. Table XVIII., in which the months are equalised to a uniform length of 31 days, is probably that which conveys this information in the most convenient form.

Children under 5 years of age died in largest proportion in December, which it must be noted was characterised by extreme cold suddenly succeeding the only really genial month of the whole year. The month of February was but little less fatal to infants and children of tender years. In August the deaths were decidedly at a minimum. Of course, the absence of hot weather prevented the usual mortality of infants from Diarrhœa.

Adolescents, among whom are here included all persons between the ages of 5 and 20 years, suffered in highest proportion in April and in May, months in which the incidence of Consumption was chiefly manifested among adolescents. The least mortality prevailed in August, the warmest month, and in November, the only genial month, of the year.

Adults, aged from 20 to 60 years, a class which, of course, includes the vast majority of those who follow active occupations, or who labour for their daily bread, died in highest proportion in January, in February, and in December—in short, in the most inclement months of the year, when diseases of the chest are apt to be most rife. The mortality of adults was least considerable in August and in November.

TABLE XVIII.—Months equalised to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1879.

MONTHS.	Relative Number of Deaths in 1879.					Monthly Deaths proportioned to 1,000 per month or 12,000 per annum.
	0-5 Years.	5-20.	20-60.	60 and above.	Total.

YEAR	10,945	2,879	8,433	5,432	27,689	12,000

Aged persons, or such as had attained the age of 60 years, died in highest proportion in January, February, and December. This is no doubt due to the comparative frequency of such diseases of the brain as Apoplexy and Paralysis, during cold weather, and to the liability to chest complaints in such weather which is alike felt by adults and by aged persons. For those of mature years the month of August appears to have been the most salubrious.

Among the whole inhabitants of the Eight Principal Towns of Scotland the deaths during each month ranked as follows in order of frequency:—January, December, February, April, March, May, June, July, November, September, October, and August.

FIFTEENTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1878.

In the following Report are included all available details regarding the working of the Vaccination Act in Scotland during the past year. These details are, of course, understood to refer to the vaccination of children born in Scotland during the year 1878; for it is not until six

months have elapsed after the completion of a year, that this Department becomes possessed of full information regarding the vaccination of the children born during its course.

The Vaccination Act continues to work very well in Scotland, thanks to the common sense of the people for whose benefit it has been designed, to the active co-operation of the medical profession in the promotion of the objects aimed at by the legislation, and to the happy exemption from the delusions of anti-vaccinators which Scotland enjoys.

The present Report will, as usual, consist chiefly of an explanation of four Tables, marked XIX. to XXII., in which the facts which it is desired to publish are clearly set forth in convenient form.

In Table XIX. will be found tolerably full particulars regarding the births that have taken place, and the vaccinations of children that have been effected in Scotland during each of the ten years 1868–1878. The successive columns of the first section of the table show, for each year, the number of children that have been successfully vaccinated,—the number of those in whose cases vaccination was postponed,—the number registered as insusceptible of vaccination, 1st, from presumed constitutional peculiarity, 2d, from having had Small-pox, 3d, from having been vaccinated in an irregular way,—the number that died unvaccinated before the completion of the sixth month of life,—the number that were removed from the districts in which they were born, or that were from other causes lost sight of by the Registrars—the registered births of each year. The average numbers for the ten years, and those for 1878 are

TABLE XX.—Vaccinations in Scotland, 1868–1878, deducting from the Births those who died before they could be Vaccinated, and giving the Proportion of the Vaccinated to the surviving Births of each year.

Years.		Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccination.			Removed from District before Vaccination, or otherwise unaccounted for.	TOTAL LIVING.

subjoined; and the second section of the table is composed merely of the percentages deduced from the numbers in the preceding section.

The births registered in Scotland during 1878 were 126854. Of these children, 111694, or 88·049 per cent., were successfully vaccinated as the Act directs; and 406, or 0·320 per cent., were by the regular vaccinators pronounced "insusceptible," vaccination having been previously performed successfully, though not by persons legally qualified to grant a valid vaccination certificate. In 1196 instances, or in the cases of 0·943 per cent. of all born, postponement of vaccination took place on production of medical authority. In 190 cases, or 0·150 per cent. of all born, children were pronounced insusceptible in consequence of some undefined constitutional peculiarity. Other three children, having had Small-pox, were in like manner registered as insusceptible of vaccination. Finally, 2460, or 1·939 per cent. of all born were lost sight of by the Registrars in consequence of having been removed by parents or guardians from the districts in which they were born. There can be little doubt that a large proportion of such children are, at the present time, still unvaccinated.

Table XX. is constructed on a plan similar to Table XIX., but deals only with such children, born in each year, as were alive six months after their births. From this table it is apparent that of the 115949 children born in 1878, and who survived for six months, 111694, or 96·330 per cent., were duly vaccinated in strict conformity with the provisions of the Act. If to these there be added 406 children on whom the operation of vaccination performed by irregular practitioners had been successful, 112100, or 96·680 per cent. are known to have been duly vaccinated. This proportion is somewhat above the mean of ten preceding years, and may be regarded as satisfactory. In 1196 instances, or in 1·031 per cent., of all children that attained the age of six months, vaccination had been, on medical authority, postponed. No doubt, good reasons might have been given for these postponements. Still, it is certain that they appear to be more frequent than is desirable. If parents and guardians were fully aware of the consequences that may ensue from postponing to the latest permissible period the duty of having their children vaccinated, it is probable that our annual list of postponements would be considerably curtailed. It may be learned from Table

TABLE XXI.—Deaths from Small-pox in Scotland, 1855-1879.

1866	200	1879	8*
1867	100		

* For 1877, 1878, and 1879, the Small-pox Deaths are estimated from the ascertained Small-pox Deaths in the Principal Towns, as compared with the Total Small-pox Deaths in all Scotland during the Twenty Years 1855-1874.

XX. that four children had passed through attacks of Small-pox before attaining the age of six months, and in the preceding General Annual Report it has been mentioned that two deaths from Small-pox occurred in 1879 in the Principal Towns, the victims being unvaccinated or imperfectly vaccinated children, one at least of which had arrived at an age when in accordance with the dictates of common prudence it should have been vaccinated. 406 children having been successfully, though irregularly, vaccinated, were pronounced "insusceptible." To this list no objection need here be made. But it is otherwise with the list of 190 children, constituting 0·164 per cent. of all living at the age of six months, who in 1878 were regarded as "insusceptible" of vaccination, owing to some presumed constitutional peculiarity. Insusceptibility of this description is, as we are assured by those most conversant with the practice of vaccination, a very rare condition indeed; some of the best English authorities, such as the late Dr Seton, seem not to believe in it at all, and express an opinion that if tested properly at one of the National Vaccine Stations, it would be found to have no real existence. We desire to express no dogmatic opinion on the subject; but it is permissible to believe that the "constitutional insusceptibility" (which is virtually a confession from an operator that he has made three unsuccessful attempts to vaccinate a child without ascertaining the cause of his failures), is in many instances not likely to be a permanent condition; and that the fact of a child holding a certificate of *insusceptibility* does not absolve its guardians from the duty of having the reality of the condition tested from time to time.

Of the 115949 children that attained the age of six months, 2460, or 2·122 per cent., are possibly still unvaccinated. This unfortunate residuum may, however, not be quite so large as in Table XX. it appears to be. It consists of all those children who in consequence of change of residence on the part of their parents or guardians were withdrawn from the surveillance of the Registrars during the period of inaction permitted by the Scotch Vaccination Act. It is to be hoped that to some of these children the benefits of vaccination have been since extended in an irregular way; but many of them are, no doubt, under the control of tramps and vagrants, who are not very likely to take much pains to inquire about statutory obligations or sanitary expediences. These unvaccinated children are accumulating in numbers from year to year, and constitute a source of danger to each other and to the country at large, which another epidemic of Small-pox would no doubt render too apparent.

TABLE XXII.—Small-pox Deaths in the Eight Principal Towns of Scotland at different Ages in 1879, also during the Ten Years 1865–1874, compared with those of the Ten Years 1855–1864, in the same Towns before the Vaccination Act came into operation.

AGES.	SMALL-POX DEATHS, 1879.		SMALL-POX DEATHS, 1865–1874.		SMALL-POX DEATHS, 1855–1864.

5–20	1	25·00	1059	28·96	660	12·19
20–60	2	50·00	1519	41·54	687	12·67
60 and above.	0	0·00	40	1·09	6	0·11
Total	4	100·00	3657	100·00	5415	100·00

The united numbers of the "constitutionally insusceptible," and of children not known at the age of six months to have been vaccinated, was, in 1878, 2650—constituting 2·286 per cent. of all children who had attained the age of six months. It is our duty once more to point out that, were the Scottish Vaccination Act assimilated to the existing Vaccination Act for England, by abridging the period during which parents and guardians are at present permitted to postpone the vaccination of their children, some saving of human life would be effected, without causing hardship or inconvenience to any one.

In Table XXI. will be found an account of the deaths from Small-pox that have been registered in Scotland, annually since 1855. The numbers for the last three years are, however, only *estimated*, on the assumption that they bear a fixed ratio to the deaths from Small-pox registered in the Eight Towns. Until the materials for the Detailed Annual Reports for 1877 to 1879 are available, it will not be in our power to present a strictly accurate statement of the Small-pox deaths that may have occurred in the whole country.

I have the honour to be,

SIR,

Your most obedient Servant,

WILLIAM ROBERTSON, M.D.

STATISTICAL DEPARTMENT,

1st March 1880.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.
N.B.—An asterisk "*" is prefixed to those Districts which comprise one or more Parishes or parts of Parishes, and the component parts of these Districts will be found at page 74.
A dagger "†" is prefixed to those Districts which consist of only a part of the Parish of the same name.
† Vaccination Return not received.

VACCINATIONS, 1878.

BIRTHS, DEATHS, AND MARRIAGES, 1879.

POPULATION.

REGISTRATION DISTRICTS.

No. of District.

Total Births for 1878.
Removed from District before Vaccination, or otherwise unaccounted for.
Died before Vaccination.
Insusceptible of Vaccine Disease.
On the ground of previous Successful Vaccination.
In respect of the Children having already had Small-pox.
On the ground of Constitutional Insusceptibility.
Vaccination Postponed.
Successfully Vaccinated.

APPENDIX.

VACCINATIONS, 1878.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

1. SHETLAND.

5. LERWICK.—It seems to be a matter of regret that some provision has not been made in the Act for cases where, from disease or constitutional taint, it is considered inexpedient or dangerous to submit the child to the operation of vaccination, and where consequently numerous postponement certificates must be furnished. In this parish there are at present four cases, in two of which 11, and in the other two, 12 postponement certificates have been furnished; and to all appearance they may go on furnishing certificates indefinitely. This is very hard on the poor parents who have to pay 1s. or 1s. 6d. for each certificate.

4. SUTHERLAND.

53. LAIRG.—Vaccination well attended to, considering the distance of some parts of the parish from the vaccinator.

II. NORTH-WESTERN DIVISION.

5. ROSS AND CROMARTY.

Insular.

89. UIG.—Some of the cases entered under Col. 7 were vaccinated, although no certificates have been received. The Medical Practitioner and the Parochial Board do not seem to have a proper understanding in the matter. The Registrar would recommend a quarterly visit from the Medical Officer to each station.

6. INVERNESS.

Mainland.

92. (1.) BOLESKINE.—All children born in the district since the passing of the Act have been vaccinated, with the exception of two, whose parents were hawkers, and of whom all trace has been lost.

96b. (2.) ROTHIEMURCHUS. — Vaccination pretty well attended to by the parents, but some difficulty is experienced in getting the certificates from the vaccinator, who on most occasions undertakes to parents to have them sent to the Registrar, but frequently forgets to do so.

97. (1.) GLENELG.—There is very little difficulty experienced in the administration of the Act in this district, but the Inspector of Poor finds considerable difficulty in getting the provisions of the Act attended to in the districts of Knoydart and North Morar. This arises partly from the people's indifference to the statutory obligations which the Act imposes upon them, and partly from their not having the same facilities for getting their children vaccinated and certified as the people in the Glenelg district.

III. NORTH-EASTERN DIVISION.

8. ELGIN (OR MORAY).

131. DUFFUS.—Little difficulty is experienced in the working of the Act. The fishing population as a rule, however, require the statutory notice to be sent, even after which certificates come in late.

9. BANFF.

148. BOTRIPHNIE.—Instead of allowing a period of six months for the performance of vaccination, the Registrar would recommend a shorter period, say four months.

10. ABERDEEN.

169. ABERDOUR.—The child unaccounted for has been removed to America.

186. CULSAMOND.—Act still requires special attention, but few parties require a second notice.

202. HUNTLY.—For the first time since the Act came into operation, the entries were all complete on 31st December 1878.

236. RAYNE.—Act well attended to. In the majority of cases certificates are delivered before the expiry of six months.

IV. EAST-MIDLAND DIVISION.

12. FORFAR.

282. (4.) ST ANDREW (DUNDEE).—A great number of parents still delay the vaccination of their children till they receive the statutory notice after the expiry of the six months, and this they do, in many instances against their own wish, by the advice of the medical men.

Only two or three of the medical men, however, act in this way. A certain midwife still persists in the doubtful practice of vaccinating, and gets a medical man to sign the certificates. Of 1752 children born, only 6 are unaccounted for, which result has entailed great attention and labour on the Registrar and Parochial Board officials.

288. FORFAR.—Number of postponements unusually large; in two cases 6 postponement certificates have been received, and in another 7.

14. FIFE.

407. AUCHTERTOOL.—The mining population have got very careless with regard to vaccination, and never think of having the operation performed till they receive the Registrar's notice.

V. WEST-MIDLAND DIVISION.

17. STIRLING.

485. LARBERT.—Of the two unaccounted for, one has been removed to England, and the other to America. A certificate of the vaccination of the child removed to England is expected.

490. STIRLING.—Sixty-eight postponed certificates, dated in 1879, were received. 82 notices were issued to parents for neglect; in several instances twice, in four instances thrice, and in one for the fourth time.

19. ARGYLL.

Mainland.

505. (1.) AHARACLE.—The 6 entered as unaccounted for were all vaccinated; but being on an island, the Medical Officer was unable to see them in consequence of the stormy nature of the weather.

512. GLENORCHY.—A good deal of pressure is still required to make parents get their children vaccinated in time.

VI. SOUTH-WESTERN DIVISION.

21. RENFREW.

568. KILBARCHAN.—The only difficulties which the Registrar has to contend with are the carelessness of some parents, and the migratory habits of others. The carelessness seems to have increased of late, probably because no cases of smallpox have occurred in the district for a considerable time.

570. LOCHWINNOCH.—Of the 4 entered under Col. 7, 2 were vaccinated; but the doctor has retained the certificates until he is paid for his trouble.

22 AYR.

590. (2.) TROON.—Nearly one-third of the parents require to be reminded of their duty under the Act.

23. LANARK.

625. (1.) BOTHWELL.—One case of prosecution before Sheriff for entry applicable to year 1877, in which conviction was obtained. The same individual was similarly convicted for entry in previous year, and refuses on principle.

627. CAMBUSLANG.—Considerable annoyance is sometimes felt in getting the certificates of vaccination returned, owing to the migratory habits of the population at the steel-works, Hallside village, and the surrounding collieries. Also a difficulty is sometimes experienced where a child has been vaccinated, but the parents being unable to pay the fee, the certificate is retained by the Medical Officer.

658. WALSTON.—The people generally are anxious to fulfil their obligations; but so much cannot be said for the "Esculapius of the Upper Ward," who, by his grievous negligence, does much to prevent the satisfactory working of the Act.

660. WISTON AND ROBERTON.—Great difficulty is experienced in procuring the medical certificates, which are often obtained long after the allotted period, but dated to suit.

VII. SOUTH-EASTERN DIVISION

27. BERWICK.

739. EYEMOUTH.—In one case postponement continued four years, and in several others for a year or less. The fee should be doubled.

28. PEEBLES.

762. INNERLEITHEN.—In one case vaccination had been postponed 22 times. The child was four years old when vaccinated.

VIII. SOUTHERN DIVISION.

30. ROXBURGH.

811. YETHOLM.—This parish being situated on the Borders, a number, who may be called vagrants, come and take up their abode for a short time, and then leave. However, since the Act came into operation, only four have failed to lodge certificates of vaccination, including the two returned as defaulters for the year 1878.

32. KIRKCUDBRIGHT.

871. KIRKCUDBRIGHT.—Act works well, generally speaking, but still too many parents require notices.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
59b	Carnoch	Parts of Contin, Fodderty, and Urray.
71b	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
86b	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir (2) Rest of Kilmuir and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbryde.
147	Banff	Banff, and part of Gamrie.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrinnnes	Parts of Aberlour and Mortlach.
167	Seafeld	Parts of Cullen and Rathven.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick, &c.
222b	Millbren	Parts of Fyvie and Monquhitter.
227a	New Machar	New Machar, and part of Udney.
227b	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
240	Strathdon	Strathdon, and part of Tarland.
249b	Ythan Wells	Parts of Auchterless and Fergie.
272	Arbroath	Arbroath, and part of St Vigens.
282	Dundee	Dundee, and part of Liff, Benvie, and Invergowrie.
312	Montrose	Montrose, and part of Dun.
324	Aberfeldy	Parts of Dull, Fortingall, Kenmore, Logierait, and Weem.
328b	Ardoch	Parts of Blackford, Dunblane, and Muthill.
331	Balquhiddier	Balquhiddier, and part of Comrie.
332	Blackford	Blackford, and part of Ardoch.
344	Dowally	Part of Dunkeld and Dowally.
348	Dunblane	Dunblane, and part of Ardoch.
349	Dunkeld	Parts of Caputh and of Dunkeld and Dowally.
355a	Fortingall	Parts of Fortingall and Weem.
355b	Foss	Part of Dull.
360	Kenmore	Parts of Kenmore and Weem.
361	Killin	Parts of Kenmore, Killin, and Weem.
367	Kinloch-Rannoch	Parts of Fortingall and Logierait.
375	Logiealmond	Parts of Fowls-Wester, Little Dunkeld, Methven, Monzie, and Redgorton.
379	Meikle	Meikle, and part of Coupar-Angus.
386a	Muthill	Muthill, and part of Ardoch. [Kinloch, and Rattray.
386b	Persie	Parts of Alyth, Bendochy, Blairgowrie, Caputh, Kirkmichael, Lethendy and
387	Perth	Perth, and parts of Kinnoull, Scone, and Tibbermore.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenantry	Parts of Blair-Athol, Dull, and Moulin.
423	Dunbog	Dunbog, and parts of Abdie and Flisk.
424	Dunfermline	Parts of Dunfermline and Inverkeithing.
432	Inverkeithing	Parts of Inverkeithing and Dunfermline.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
481b	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
490	Stirling	Stirling, and small part of St Ninians.
493	Bonhill	Bonhill, and part of Dumbarton.
496	Dumbarton	Parts of Cardross and Dumbarton.
506	Ballachulish, etc.	Part of Kilmalie.
509	Cumlodden and Minard	Parts of Glassary and Inveraray.
512	Glenorchy	Glenorchy, and part of Inishail.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan	(1) Parts of Kilchrenan, etc., and Inishail.
526	Lochgilthead	Parts of Glassary and South Knapdale.
529	Muckairn	Muckairn, and part of Inishail. [Knapdale.
535	Tarbert	Parts of Kilcalmonell and Kilberry, of Saddell and Skipness, and of South
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
542	Kilfinichen and Kilvickeon	Parts of Kilfinichen and Kilvickeon, and of Torosay.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelve	Part of Torosay.
547	Portmahaver	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and of Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
556	Lochranza	Parts of Kilbride and of Kilmory.
557	North Bute	North Bute, and part of Rothesay.
573	Paisley	Burgh of Paisley and small part of Abbey Landward.
578	Ayr	Ayr, and parts of Newton-upon-Ayr, and of St Quivox.
584b	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
612	St Quivox, etc.	Parts of Newton-upon-Ayr, and St Quivox.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	City of Glasgow, including Gorbals and parts of Barony and Govan
670	Queensferry	Queensferry, and part of Dalmeny.
684	Portobello	Parts of Duddingston and South Leith.
685	Edinburgh	City of Edinburgh, including Canongate and parts of St Cuthberts, Dudding- ston, Liberton, and South Leith.
690	Kirknewton & East Calder	Kirknewton and East Calder, and part of Kirkliston.
692	Leith	(1) Parts of Cramond, North Leith, and St Cuthberts; (2) Parts of North Leith, St Cuthberts, and South Leith.
698b	Stobhill	Parts of Borthwick, Cockpen, Newbattle, and Temple.
774a	Caddonfoot	Parts of Galashiels, Selkirk, Yarrow, Innerleithen, and Stow.
776b	Ladhope	Part of Melrose.
787b	Edgerston	Parts of Jedburgh, Oxnam, and Southdean.
813b	Brydekirk	Parts of Annan, Cummertrees, and Hoddon.
853b	Wanlockhead	Part of Sanquhar.
857b	Bargrennan	Parts of Minnigaff (Kirkcudbright) and of Penninghame (Wigtown)
862	Corsockbridge	Parts of Balmacellan, Kirkpatrick-Durham, and Parton.
864	Dalbeattie	Part of Urr.
899	Stranraer	Stranraer, and parts of Inch and Leswalt.

Avondale, 621		Colonsay, 539		Edgerston, 787
Ayr, 578		Colvend, 861		Edinburgh, 685
Ayton, 727		Comrie, 341		

* The actual number of Districts is 1033—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Edinkillie, .	134	Glenbervie, .	261	Irongray, .	867	Kinclaven, .	365	Langholm, .	839
